The Adventures of Haole the Penguin J. E. Milne,2011-04 Think of the last time you were in the snow. This is the story of Haole, a bird that can't fly but surfs fifty foot waves in Antarctica and is about to make the most important discovery of his life - The inner game of surfing -The magic that makes life a game. The Adventures of Haole the Penguin begin on a floating slab of ice connected to the Antarctic mainland and pummeled by massive storm waves all winter. It's a hell of a place to live, but the penguins call it home. They spend their time divided between fishing, staying warm, and gossiping about one another.This was the penguin's entire universe. No penguin ever ventured outside of this landscape and the few miles of ocean that surround it. On several occasions Haole had asked his mother about this very thing. One time it was while they stood together, watching a storm approach over the cliffs to the west. What's past those cliffs? Haole asked innocently. Just more ice, his mother had responded automatically. She used to seem so big to Haole, towering above him, but since he had his growth spurt she didn't seem so huge. She was just a little taller than him now. The answer didn't satisfy him. Well, what's beyond that? he persisted innocently. Even more ice, she said firmly, then added and more cliffs. There was a long pause as Haole doubted for a second that his mom knew everything. Mom? What is it, Haole? She looked at him sweetly. Well, what's beyond that? He was going to repeat the question until he got an answer other than 'ice.' His mother's feathers ruffled. Why don't you spend your time thinking about more important things? she gently scolded him. Like what? he asked, although he already knew the answer. Like fishing, she said predictably. Haole, one of these days very soon you are going to have to stop all of your dreaming and start keeping your mind on practical matters. You are growing up. See what I mean, Dear reader? Haole does not fit in. He is convinced there must be more to life than fish and gossip and aches to discover the worlds' mysteries. Synchronicity steps in as he stumbles upon something else, something magical that he likes to do in his free time. The other penguins think this is absurd. What else is there except fish, fishing, and staying warm... except staying away from the killer whales and leopard seals? Well, Haole happens on this other thing quite by accident as he is coming back to the ice sheet from fishing one day. While swimming out by the reef during a storm he has his first glimpse of this magic when he learns to surf in a freak encounter with a hungry killer whale and a huge rogue-wave! This begins a trail of discovery for Haole that leads him to run away from home, traveling the South Pacific riding perfect waves. He and his friend Donna travel all the way to Tahiti where they meet and take their place in an ocean-wide community of sea creatures. This is where he will face his biggest challenge and learn life's biggest lesson. Haole's story touches readers hearts because along with a compelling plot about coming of age, it genuinely conveys a love for the environment and the importance of taking personal responsibility not just for the oceans, but for one's own dreams. To put it simply it's a gripping tale of a bird finding the inner magic of life and then bringing it home with him. This book takes you surfing.

Journey Through the Video Game World Ashad Mukadam,2014-08-20 In February 2013, Ronald Charlton was laid off from his job at Pacific IT and Consulting in Calgary, Alberta, Canada. Soon after, he decided to start playing video games, initially as a way to just let out some steam. However, it is now August, and he has still not stopped playing. This is now starting to affect the relationships he has with his family and his girlfriend. Then, on a rainy day in August 2013, a major thunderstorm hits Calgary. Ronald, who has been playing throughout the storm, is just about to hit a new high score on his video game when lightning strikes the console, causing an electrical current to travel down the wire to his controller, which then surrounds him, and transports him to the video game world. He soon finds out that he must physically play and complete a number of games in a certain order only known to them in order to get home. Ronald, along with his guide Pixie, then embark on a journey to return Ronald home.

Winter Adam Gopnik,2011-08-24 The 2011 CBC Massey Lectures celebrates fifty years with bestselling author, essayist, cultural observer, and famed New Yorker contributor Adam Gopnik, whose subject is winter -- the season, the space, the cycle. Gopnik takes us on an intimate tour of the artists, poets, composers, writers, explorers, scientists, and thinkers, who helped shape a new and modern idea of winter. Here we learn how a poem by William Cowper heralds the arrival of the middle class; how snow science leads to existential questions of God and our place in the world; how the race to the poles marks the human drive to imprint meaning on a blank space. Gopnik's kaleidoscopic work ends in the present day, when he traverses the underground city in Montreal, pondering the future of Northern culture. A stunningly beautiful meditation buoyed by Gopnik's trademark gentle wit, *Winter* is at once an enchanting homage to an idea of a season and a captivating journey through the modern imagination. This deluxe 50th anniversary edition includes full-colour images printed on two 8-page inserts.

Sea Ice David N. Thomas,2016-12-27 Over the past 20 years the study of the frozen Arctic and Southern Oceans and sub-arctic seas has progressed at a remarkable pace. This third edition of *Sea Ice* gives insight into the very latest understanding of the how sea ice is formed, how we measure (and model) its extent, the biology that lives within and associated with sea ice and the effect of climate change on its distribution. How sea ice influences the oceanography of underlying waters and the influences that sea ice has on humans living in Arctic regions are also discussed. Featuring twelve new chapters, this edition follows two previous editions (2001 and 2010), and the need for this latest update exhibits just how rapidly the science of sea ice is developing. The 27 chapters are written by a team of more than 50 of the world's leading experts in their fields. These combine to make the book the most comprehensive introduction to the physics, chemistry, biology and geology of sea ice that there is. This third edition of *Sea Ice* will be a key resource for all policy makers, researchers and students who work with the frozen oceans and seas.

Journeys with Emperors Gerald L. Kooyman,Jim Mastro,2023 With stunning photographs from the ice edge, this firsthand account of a researcher's time in Antarctica and of the perilous journeys of the world's largest penguin species: the iconic emperor. Nearly all emperor penguin colonies are extremely remote; of the sixty-six known, fewer than thirty have been visited by humans, and even fewer have been the subject of successful research programs. One of the largest known emperor penguin colonies is found on a narrow band of sea ice attached to the Antarctic continent. In *Journeys with Emperors*, Gerald L. Kooyman and Jim Mastro take us to this far-flung colony in the Ross Sea, revealing how scientists gained access to it, and what they learned while living among the penguins as they raised their chicks. The Ross Sea colony is close to the ice edge, which spares the penguins the long, energy-draining march for which other colonies are well-known. But life at this colony is not without movement. The proximity of the ice edge to the birds allowed researchers to observe the penguins as they came and went on their foraging journeys, including their interactions with leopard seals and killer whales. What the scientists witnessed revealed important aspects of emperor penguin behavior and

physiology. For instance, they discovered that in the course of hunting for food, some of the penguins dive to depths of greater than five hundred meters (a third of a mile, deeper than any other diving bird). And crucially: most of the emperor's life is actually spent at sea, with fledged chicks and adults making separate, perilous journeys across icy water--to mature or to feed before they must fast while they molt. When chick nurturing is complete, the fledglings abandon the colony in large groups, heading north to the Southern Ocean. The adults leave at the same time, traveling one thousand kilometers eastward across the Ross Sea to a sea-ice sanctuary for molting. During this journey, they must gain enough weight to survive the month-long molt, when every feather is replaced and the birds cannot enter the water to feed. After the molt, many if not most return to the colony to breed once again. For the males, this means another fast--this time for 120 days as they incubate their eggs. Featuring original color photographs and complemented with online videos, *Journeys with Emperors* is both an eye-opening overview of the emperor penguin's life and a thrilling tale of scientific discovery in one of the most remote, harsh, and beautiful places on Earth.

Headless Males Make Great Lovers Marty Crump,2008-11-15 The natural world is filled with diverse—not to mention quirky and odd—animal behaviors. Consider the male praying mantis that continues to mate after being beheaded; the spiders, insects, and birds that offer gifts of food in return for sex; the male hip-pocket frog that carries his own tadpoles; the baby spiders that dine on their mother; the beetle that craves excrement; or the starfish that sheds an arm or two to escape a predator's grasp. *Headless Males Make Great Lovers and Other Unusual Natural Histories* celebrates the extraordinary world of animals with essays on curious creatures and their amazing behaviors. In five thematic chapters, Marty Crump—a tropical field biologist well known for her work with the reproductive behavior of amphibians—examines the bizarre conduct of animals as they mate, parent, feed, defend themselves, and communicate. Crump's enthusiasm for the unusual behaviors she describes—from sex change and free love in sponges to aphrodisiac concoctions in bats—is visible on every page, thanks to her skilled storytelling, which makes even sea slugs, dung beetles, ticks, and tapeworms fascinating and appealing. Steeped in biology, *Headless Males Make Great Lovers* points out that diverse and unrelated animals often share seemingly bizarre behaviors—evidence, Crump argues, that these natural histories, though outwardly weird, are successful ways of living. Illustrated throughout, and filled with vignettes of personal and scientific interest, *Headless Males Make Great Lovers* will enchant the general reader with its tales of blood-squirting horned lizards and intestine-ejecting sea cucumbers—all in the service of a greater appreciation of the diversity of the natural histories of animals.

Perfect Pairs, 3-5 Melissa Stewart,Nancy Chesley,2023-10-10 Hands-on lessons can be fun and compelling, but when it comes to life science, they aren't always possible, practical, effective, or safe. Children can't follow wolves as they hunt elk, visit a prehistoric swamp, or shrink down to the size of a molecule and observe photosynthesis firsthand. But they can explore a whole world of animals, plants, and ecosystems through the pages of beautifully illustrated, science-themed picture books. *Perfect Pairs*, which marries fiction and nonfiction picture books focused on life science, helps educators think about and teach life science in a whole new way. Each of the twenty lessons in this book is built around a pair of books that introduces a critical life science concept and guides students through an inquiry-based investigative process to explore that idea--from life cycles and animal-environment interactions to the inheritance of traits and the critical role of energy in our world. Each lesson starts with a Wonder Statement and comprises three stages. Engaging Students features a hands-on activity that captures student interest, uncovers current thinking, and generates vocabulary. The heart of the investigative process, Exploring with Students, spotlights the paired books as the teacher reads aloud and helps students find and organize information into data tables. Encouraging Students to Draw Conclusions shows students how to review and analyze the information they have collected. Bringing high-quality science-themed picture books into the classroom engages a broad range of students, addresses the Performance Expectations outlined in the Next Generation Science Standards, and supports the goals of the Common Core State Standards for English Language Arts. Even if you are science shy, *Perfect Pairs* can help you become a more confident teacher whose classroom buzzes with curious students eager to explore their natural world.

The Heart of the Antarctic Sir Ernest Shackleton,2018-09-08 MEN go out into the void spaces of the world for various reasons. Some are actuated simply by a love of adventure, some have the keen thirst for scientific knowledge, and others again are drawn away from the trodden paths by the lure of little voices, the mysterious fascination of the unknown. I think that in my own case it was a combination of these factors that determined me to try my fortune once again in the frozen south.... Indeed the stark polar lands grip the hearts of the men who have lived on them in a manner that can hardly be understood by the people who have never got outside the pale of civilisation. I was convinced, moreover, that an expedition on the lines I had in view could justify itself by the results of its scientific work. The Discovery expedition had brought back a great store of information, and had performed splendid service in several important branches of science. I believed that a second expedition could carry the work still further.... Sir Ernest Shackleton
