With an eager team, and the promise of a better future, Arlo takes on the challenge, only to find more at stake than the rights to Proxima. Sports Innovation, Technology and Research Dominic F L Southgate, Peter R N Childs, Anthony M J Bull, 2016-07-29 Sports Innovation, Technology and Research gives an insight into recent research and design projects at Imperial College London. It presents the on-going development of a diverse range of areas from elite rowing performance to impact protection to sporting amenities in communities. Also included are descriptions of some of the latest innovations that have been developed as part of the Rio Tinto Sports Innovation Challenge, an initiative that tasked engineering students to design, build and implement Paralympic and other sporting equipment. It offers a glimpse at the breadth of creativity that can be achieved when human centred design is applied to an area such as disabled sport. It also shows the potential that

design and engineering have to contribute to healthy lifestyles and the generation of whole new sporting domains. This book will be valuable for anyone with an interest in sports technology, including those in industry, academia, sports organisations and athletes themselves.

Dark Side of the Moon: Wernher von Braun, the Third Reich, and the Space Race Wayne Biddle, 2009-09-28 A stunning investigation of the roots of the first moon landing forty years ago. This illuminating story of the dawn of the space age reaches back to the reactionary modernism of the Third Reich, using the life of “rocket scientist” Wernher von Braun as its narrative path through the crumbling of Weimar Germany and the rise of the Nazi regime. Von Braun, a blinkered opportunist who could apply only tunnel vision to his meteoric career, stands as an archetype of myriad twentieth century technologists who thrived under regimes of military secrecy and unlimited money. His seamless transformation from developer of the deadly V-2 ballistic missile for Hitler to an American celebrity as the supposed genius behind the golden years of the U.S. space program in the 1950s and 1960s raises haunting questions about the culture of the Cold War, the shared values of technology in totalitarian and democratic societies, and the imperatives of material progress.

Watching the Olympics John Sugden, Alan Tomlinson, 2012-04-27 Global sporting events involve the creation, management and mediation of cultural meanings

for consumption by massive media audiences. The apotheosis of this cultural form is the Olympic Games. This challenging and provocative new book explores the Olympic spectacle, from the multi-media bidding process and the branding and imaging of the Games, to security, surveillance and control of the Olympic product across all of its levels. The book argues that the process of commercialization, directed by the IOC itself, has enabled audiences to interpret its traditional objects in non-reverential ways and to develop oppositional interpretations of Olympism. The Olympics have become multi-voiced and many themed, and the spectacle of the contemporary Games raises important questions about institutionalization, the doctrine of individualism, the advance of market capitalism, performance, consumption and the consolidation of global society. With particular focus on the London Games in 2012, the book casts a critical eye over the bidding process, Olympic finance, promises of legacy and development, and the consequences of hosting the Games for the civil rights and liberties of those living in their shadow. Few studies have offered such close scrutiny of the inner workings of Olympism's political and economic network, and, therefore, this book is indispensable reading for any student or researcher with an interest in the Olympics, sport's multiple impacts, or sporting mega-events.
