Winner of the Margaret Mahy Book of the Year New Zealand Book Awards for Children and Young Adults 2015 Young Adult Category Winner New Zealand Book Awards for Children and Young Adults 2015 Storylines Notable Young Adult Fiction Award 2015 Will Jackson is hiding out, a city boy reluctantly staying with his uncle in small town New Zealand while he struggles to recover from a brutal attack and the aftermath of a humiliating YouTube clip gone viral. After he discovers a young abandoned orca whale his life is further thrown into chaos, when he rallies to help protect it against hostile, threatening interests. This threatens to tear apart the small fishing community and forever changes Will's life. The boy and the whale develop a special bond, linked by Will's love of singing. Song for a Whale Lynne Kelly,2019-02-05 In the spirit of modern-day classics like Fish in a Tree and Counting by 7s comes the Schneider Family Book Award-winning story of a deaf girl's connection to a whale whose song can't be heard by his species, and the journey she takes to help him. From fixing the class computer to repairing old radios, twelve-year-old Iris is a tech genius. But she's the only deaf person in her school, so people often treat her like she's not very smart. If you've ever felt like no one was listening to you, then you know how hard that can be. When she learns about Blue 55, a real whale who is unable to speak to other whales, Iris understands how he must feel. Then she has an idea: she should invent a way to sing to him! But he's three thousand miles away. How will she play her song for him? Full of heart and poignancy, this affecting story by sign language interpreter Lynne Kelly shows how a little determination can make big waves. Fascinating, brave, and tender...a triumph. --Katherine Applegate, Newbery Award-winning author of The One and Only Ivan

Humpback Whale Natalie Lunis,2011-08-01 Humpback whales are prolific singers. These marine mammals belt out songs that travel incredible distances through the ocean and can continue for hours on end. The whales use howls, cries, moans and other noises to create their intricate songs. These are just some of the fun facts kids will discover as they learn all about these animal loudmouths. Spectacular photos and clear, easy-to-read text will engage emergent readers as they come face-to-face with these noisy animals. In addition, children discover where the animals live, how they stay safe, and the different ways their sounds help them communicate with each other. A “Sound Check” chart at the end of the book compares the decibel level of the humpback whale to familiar noises, including an ambulance, a lawnmower, and a whisper.

Whale Music David Rothenberg,2023-02-28 The marvelous sonic world of whales, from the perspective of music and science. Whale song is an astonishing world of sound whose existence no one suspected before the 1960s. Its discovery has forced us to confront the possibility of alien intelligence—not in outer space but right here on earth. Thoughtful, richly detailed, and deeply entertaining, Whale Music uses the enigma of whale sounds to open up whales' underwater world of sonic mystery. In observing and talking with leading researchers from around the globe as they attempt to decipher undersea music, Rothenberg tells the story of scientists and musicians confronting an unknown as vast as the ocean itself. His search culminates in a grand attempt to make interspecies music by playing his clarinet with whales in their native habitats, from Russia to Canada to Hawaii. This is a revised edition of Thousand Mile Song, originally published in 2008. The latest advances in cetacean science and interspecies communication have been incorporated into this new edition, along with added photographs and color whale scores.

The Whales' Song Dyan Sheldon,1997-01-01 Enthralled by her grandmother's story of seeing and hearing whales singing in the sea long ago, Lilly hopes to see them herself and to hear their mysterious songs.

Have you ever Heard a Whale Sing Divya Panicker,Deepti Sharma,2021-12-03 The underwater world is a noisy place. Fluke Christopher Moore,2009-10-13 “Readers new to the work of Christopher Moore will want to know two things immediately. First: Where has this guy been hiding? (Answer: In plain sight, since he has a cult following.)...[H]e writes laid back fables straight out of Margaritaville, on the cusp of humor and science fiction.”—Janet Maslin, New York Times Whale researcher Nathan Quinn has a problem. It’s not a new problem; in fact, it’s been around for nearly 20 million years. And Nate’s spent most of his adult life working to solve it. You see, although everybody (well, almost everybody) knows that humpback whales sing (outside of human composition, the most complex songs on the planet) no one knows why. Nate, a Ph.D. in behavior biology, intends to discover the answer to this burning question—and soon. Every winter he and Clay Demolocus, his partner in the Maui Whale Research Foundation, ply the warm waters between the islands of Maui and Lanai, recording the eerily beautiful songs of the humpbacks and returning to their lab for electronic analysis. The trouble is, Nate’s beginning to wonder if he hasn’t spent just a little too much time in the sun. Either that, or he’s losing his mind. Because today, as he was shooting an I.D. photo of a humpback tail fluke, Nate could’ve sworn he saw the words “Bite Me” scrawled across the whale’s tail. . .

Among Whales Roger Payne,1995 Taking readers on a journey across the spectrum of life to discover the answers to the larger questions of life on Earth, an eminent field biologist addresses a wide range of subjects--from the purpose of the brain to the possibilities of peaceful cohabitation among the world's creatures. 9 charts.

Singing Whales and Flying Squid Richard Ellis,2006-01-01 Two-thirds of this planet is covered by water inhabited by an incredible variety of living organisms, ranging in size from microbe to whale, and in abundance from scarce to uncountable. Whales and dolphins must surface to breathe, and some fishes occupy surface waters and can easily be seen from boats or shore, but most of the marine bio-profusion is hidden from human eyes, often under thousands of feet and millions of tons of water, which is usually cold, dark, and utterly inhospitable to humans. By definition, the study of marine life has been quantitatively and qualitatively different from the study of terrestrial life--it is, if you will, a different kettle of fish. What do we know today, how have we learned it, and what remains unknown and unknowable about inner space? Because there have been so few human visitors to the uninviting world of the deep sea, scientists have had to rely on trawled specimens, photographs taken by robotic cameras, or occasionally, observations from deep-diving

submersibles, to get even the vaguest idea of the nature of life in the abyss. So far, even our most elaborate efforts to penetrate the blackness have produced only minimal results. It is as if someone lowered a collecting basket from a balloon high above the tropical rain forest floor, and tried to analyze the nature of life in the jungle from a couple of random hauls. The inner space of the deep offers the last frontier on the planet. Even now, we know more about the back side of the moon than we do about the bottom of the ocean, but then the surface of the moon is not hidden under miles of impenetrable water. But we do know that living in this inaccessible medium are some of the most fascinating creatures on Earth. An understanding of the interrelationships between various creatures—including the one predator that has the power to distort, damage, or even eliminate populations of marine animals—is necessary if we are to survive in harmony with these populations. Although new technologies have given us tools to better census the whales, dolphins, and fishes, and to see heretofore unexpected life and geological forms deep under the sea, we are a long way from comprehending the nature and importance of marine biodiversity. Singing Whales, Flying Squid, and Swimming Cucumbers is an attempt to put the search for knowledge into perspective—to try to find out how we got here, and where, with the help of curiosity, science, and technology, we might be headed. With this as our Baedeker, we will voyage through time and space, tracing the history of the discovery of marine biology, from the moment that the first scientists—although for the most part, science had barely been invented—tried to figure out what sorts of creatures lived in the Mediterranean, the sea right off their shores. So join Richard Ellis on an underwater adventure like no other you've ever taken or heard of: a voyage to discover the mysteries and reveal the wonders of marine life—more unusual and more astonishing than you—or anyone else—ever imagined.

Whale Song Dyan Sheldon,1996 Lilly dreamt about whales. In her dreams she saw them, as large as mountains and bluer than the sky. In her dreams she heard them singing.

Humpback Whale (Young Zoologist) Dr. Asha de Vos,Neon Squid,2022-06-07 Head to the depths of the ocean to study humpback whales in this beautiful nonfiction field guide for kids. You may know that humpback whales use whale song to communicate with each other, but there’s so much more to discover about these giants of the sea! In this book, acclaimed marine biologist Dr. Asha de Vos explains how humpbacks use special bubble nets to catch fish, and why their poo is so important! Filled with simple science and plenty of animal facts, this book also explains how hunting made humpback whales an endangered species—and how conservation efforts have seen their numbers increase again. Featuring stunning illustrations by Jialei Sun, Humpback Whale (Young Zoologist) is part of an exciting new series of animal books from Neon Squid aiming to inspire the next generation of biologists and conservationists.
