

A Trip To The Moon From The Earth To The Moon Lite

Marco Cascella

Next Time You See the Moon Emily Rachel

Morgan,2014-07-01 This fascinating book will stay with children every time they gaze up at the night sky. Through vivid pictures and engaging explanations, children will learn about many of the Moon's mysteries: what makes it look like a silvery crescent one time and a chalk-white ball a few nights later, why it sometimes appears in the daytime, where it gets its light, and how scientists can predict its shape on your birthday a thousand years from now. *Next Time You See the Moon* is an ideal way to explain the science behind the shape of the Moon and bring about an evening outing no child—or grown-up—will soon forget. Awaken a sense of wonder in a child with the *Next Time You See* series from NSTA Kids. The books will inspire elementary-age children to experience the enchantment of everyday phenomena such as sunsets, seashells, fireflies, pill bugs, and more. Free supplementary activities are available on the NSTA website. Especially designed to be experienced with an adult—be it a parent, teacher, or friend—*Next Time You See* books serve as a reminder that you don't have to look far to find something remarkable in nature.

A Trip to the Moon Anonymous,2023-06-02 An article from the April 1855 issue of Putnam's Monthly magazine discusses the scientific view of the moon, limited to telescopic observations, the idea of travel to the moon, past moon hoaxes, and other 19th century notions about the lunar orb.

From the Earth to the Moon and a Trip Round It (illustrated)
Jules Verne,2021-01-08 *From the Earth to the Moon* is an 1865 novel by Jules Verne. It tells the story of the Baltimore Gun Club, a post-American Civil War society of weapons enthusiasts, and their attempts to build an enormous Columbiad space gun and launch three people—the Gun Club's president, his Philadelphian armor-making rival, and a French poet—in a projectile with the goal of a Moon landing. Five years later, Verne wrote a sequel called *Around the Moon*. The book contains original illustrations of the famous

book graphic artist Boris Kosulnikov.

From the Earth to the Moon, and a Trip Around It Jules Verne, 2013-12-24 Jules Verne was an incredible visionary. His two stories regarding the first attempts by man to leave the surface of the Earth, travel across a vast distance and visit our satellite were incredible for the time in which they were written. But, even more so in that Verne predicted that Florida in the United States would be the point of takeoff and that three men would take part in the journey. There are many other surprises in store for the reader, and though Verne was incorrect on a few details it is almost as if he had visited his future and witnessed the events. This is a combination of the two stories detailing the trip and the return to our planet. Eighty illustrations accompany the text. This is a fine translation of Verne's original French writings with only minor interference by several editors over the years to standardize spellings and correct a few obvious typos.

Trips to the Moon Of Samosata Lucian,2019-11-20 Trips to the Moon by Of Samosata Lucian was originally written in the 2nd century, though it was later translated in the late 1800s. A satire about society through the lens of the ancient Greeks, the book is just as fun and insightful to read now as it was nearly two thousand years ago when it was first penned.

From The Earth To The Moon (Illustrated) Jules Verne,2014-08-14 From the Earth to the Moon (French: De la terre à la lune) is an 1865 novel by Jules Verne. It tells the story of the Baltimore Gun Club, a post-American Civil War society of weapons aficionados, and their attempts to build an enormous sky-facing Columbiad space gun and launch three people — the Gun Club's president, his Philadelphian armor-making rival, and a French poet — in a projectile with the goal of a moon landing. The story is also notable in that Verne attempted to do some rough calculations as to the requirements for the cannon and, considering the comparative lack of any data on the subject at the time, some of his figures are surprisingly close to reality. However, his scenario turned out to be impractical for safe manned space travel since a much longer muzzle would have been required to reach escape velocity while limiting acceleration to survivable limits for the passengers. The character of Michel Ardan, the French poet in the novel, was inspired by the real-life photographer Félix Nadar.

From the Earth to the Moon, Direct in Ninety-Seven Hours and Twenty Minutes: and a Trip Round It Jules Verne,2022-06-13 From the Earth to the Moon is a novel by Jules Verne, telling the story of the Baltimore Gun Club, a post-American Civil War society of weapons enthusiasts, and their attempts to build an enormous Columbiad space gun to send to the Moon. Three people have to be on board - the Gun Club's president, his Philadelphian armor-making rival, and a French poet. The book is notable for Verne's attempt to do rough calculations, and some of the figures were remarkably accurate.

Moonwalk Judy Donnelly,1989-05-06 The astronauts of Apollo 11 made history as the first men to land on the Moon. Learn more about how Neil Armstrong, Buzz Aldrin, and Michael Collins trained and achieved this momentous feat in this Step 5 History Reader. Step 5 Readers tell stories in chapters using longer paragraphs, for children who want to take the plunge into chapter books but still like colorful illustrations and photography. The story of Apollo 11's historic flight, from lift-off, through 'The Eagle has landed,' to splashdown and quarantine. Donnelly does a good job of setting the stage with chapters on the history of the idea of flight to the moon, astronaut selection and training, and look at the flight's effect on people in general. --School Library Journal.

Space Strategy Jean-Luc Lefebvre,2017-03-10 Strategy is the art of thinking about war before it occurs. Noting that space already plays a role in all of today's wars, Space Strategy studies how conflicts are extending into this new domain. The book defines extra-atmospheric space and focuses on its varying features and constraints. By exploring the opportunities for action provided by different strategic positions, the book analyzes the most plausible combat scenarios from, against and within space. It explains the concepts of militarization, weaponization and martialization of space and shows how space systems constitute

an essential component of information literacy – the key to power in the 21st Century. Space Strategy then demonstrates why our society, having become space-dependent, must take appropriate measures to develop its spatioresilience. Finally, the author summarizes his reflections in the form of a mnemonic listing twelve principles of space strategy. Completed by educational appendices and a glossary containing one thousand entries, Space Strategy meets the needs of students, researchers or any other reader curious about expanding their knowledge of strategy.

Full Moon Michael Light, Andrew Chaikin, 1999 The most thrilling of all journeys--the missions of the Apollo astronauts to the surface of the Moon and back--yielded 32,000 extraordinarily beautiful photographs, the record of a unique human achievement. Until recently, only a handful of these photographs had been released for publication; but now, for the first time, NASA has allowed a selection of the master negatives and transparencies to be scanned electronically, rendering the sharpest images of space that we have ever seen. Michael Light has woven 129 of these stunningly clear images into a single composite voyage, a narrative of breathtaking immediacy and authenticity that begins with the launch and is followed by a walk in space, an orbit of the Moon, a lunar landing and exploration, and a return to Earth with an orbit and splashdown. Graced by five 45-inch-wide gatefolds that display the lunar landscape, from above the surface and at eye level, in unprecedented detail and clarity, *Full Moon* conveys on each page the excitement, disorientation, and awe that the astronauts themselves felt as they were shot into space and then as they explored an alien landscape and looked back at their home planet from hundreds of thousands of miles away. Published on the thirtieth anniversary of Apollo 11--the first landing on the Moon--this remarkable and mesmerizing volume is, like the voyages it commemorates and re-creates, an experience both intimate and monumental.
