Stravinsky in the Americas H. Colin Slim, 2019-01-15 Stravinsky in the Americas explores the "pre-Craft" period of Igor Stravinsky's life, from when he first landed on American shores in 1925 to the end of World War II in 1945. Through a rich archival trove of ephemera, correspondence, photographs, and other documents, eminent musicologist H. Colin Slim examines the twenty-year period that began with Stravinsky as a radical European art-music composer and ended with him as a popular figure in American culture. This collection traces Stravinsky's rise to fame-catapulted in large part by his collaborations with Hollywood and Disney and marked by his extra-marital affairs, his grappling with feelings of anti-Semitism, and his encounters with contemporary musicians as the music industry was emerging and taking shape in midcentury America. Slim's lively narrative records the composer's larger-than-life persona through a close look at his transatlantic tours and domestic excursions, where Stravinsky's personal and professional life collided in often-dramatic ways.

**Developments in Polymer Characterisation-1** J. V. Dawkins,1978-10 Over two decades ago, the term characterisation covered just those techniques which measured the properties of polymers in solution in order to determine molecular weight and size. The discoveries of stereoregular polymers and polymer crystals created the need for new and advanced techniques for characterising chain structures and bulk properties. Further demands for new and improved characterisation methods for bulk polymers have resulted from the recent development and exploitation of multi phase polymeric systems, such as polymer blends, block and graft copolymers, and polymer composites. Today, therefore, characterisation is a very important part of polymer science. The polymer chemist must know the chain length, chain microstructure and chain conformation of the polymers he or she has prepared, i. e. the determination of molecular properties. The scientist involved in exploiting polymers in such applications as plastics, elastomers, fibres, surface coatings and adhesives must be informed on the morphology and physical and mechanical behaviour of his or her products, i. e. the determination of bulk and surface properties and their dependence on molecular properties. The techniques required for these determinations now cover an extremely wide field. Our aim has been to review a number of techniques critically and in sufficient depth so that the present state and future potential of each technique may be judged by the reader. Three criteria were used in the selection of techniques. First, we wished to present new methods which have been developed actively in the polymer field during the past five years.

Independent Commission on Banking final report Independent Commission on Banking,2011-09-13 The Independent Commission on Banking's final recommendations aim to create a more stable and competitive basis for UK

banking for the long term. The result would be a banking system that is much less likely to cause, or succumb to, financial crises and the huge costs they bring; is self-reliant, so that the taxpayer does not have to bear the losses that banks make; and is effective and efficient at providing the basic banking services of safeguarding retail deposits, operating secure payments systems, and efficiently channelling savings to productive investments in the economy. Stability is crucial and UK banks should have more equity capital and loss-absorbing debt – beyond what has so far been internationally agreed – and their retail banking activities should be structurally separated, by a ring-fence, from wholesale and investment banking activities. The Commission also address competition, which has not been properly effective in UK retail banking. They recommend a seamless switching system based on redirection for personal and small business current accounts, free of cost and risk, complemented by measures to enhance transparency. The new Financial Conduct Authority should have a clear duty to promote effective competition. Structural reform should be complete by the Basel implementation date of 2019 at the latest. These reforms would result in better-capitalised, less leveraged banking more focused on the needs of savers and borrowers in the domestic economy. At the same time UK banks would be free to flourish in global markets, but without UK taxpayer support.
