Design, Operation, and Control of Insect-Rearing Systems Allen Carson Cohen, 2021-06-28 *Design, Operation, and Control of Insect-Rearing Systems: Science, Technology, and Infrastructure* explains the fundamental components of insect rearing: 1) the rearing systems, per se 2) personnel 3) education of rearing personnel 4) communication of procedures 5) an in-depth look at silkworm rearing 5) facilities where rearing is conducted, and 6) funding for all these components. Insect rearing serves a wide array of purposes, including research, pest control by sterile insect technique and biological control, production of insects as food for other animals, conservation, education, and even far-reaching technology where insects are used to produce products such as pharmaceutical materials and strong, multipurpose textiles. This book surveys and analyzes insect rearing from a scientific and technology-based approach. At its foundation, this approach assumes that rearing systems are complex interactions of components that can be understood and controlled by using a mechanistic approach. Author Allen Carson Cohen explains the infrastructure of rearing systems, their current status and character, and what kind of changes can be made to improve the field of insect rearing. Two Appendices republish out-of-print monographs that provide fascinating historical context to the development of the insect-rearing systems we have today.

The Golden Ratio and Fibonacci Numbers R. A. Dunlap, 1997 In this invaluable book, the basic mathematical properties of the golden ratio and its occurrence in the dimensions of two- and three-dimensional figures with

fivefold symmetry are discussed. In addition, the generation of the Fibonacci series and generalized Fibonacci series and their relationship to the golden ratio are presented. These concepts are applied to algorithms for searching and function minimization. The Fibonacci sequence is viewed as a one-dimensional aperiodic, lattice and these ideas are extended to two- and three-dimensional Penrose tilings and the concept of incommensurate projections. The structural properties of aperiodic crystals and the growth of certain biological organisms are described in terms of Fibonacci sequences.

The Lexis and Lexicogrammar of Sri Lankan English Tobias Bernaisch, 2015-09-15 This book offers the first in-depth corpus-based description of written Sri Lankan English. In comparison to British and Indian English, lexical and lexicogrammatical features of Sri Lankan English are analysed in a complex corpus environment comprising data from the respective components of the International Corpus of English, newspapers and online sources to explore the status of Sri Lankan English as a variety in its own right. The evolution of Sri Lankan English is depicted against the background of historical as well as sociolinguistic considerations and allows deriving a fine-grained model of the emergence of distinctive structural profiles of postcolonial Englishes developing in a multitude of norm orientations. This book is highly relevant to readers interested in Sri Lankan English and South Asian Englishes. It also offers more general sociolinguistic perspectives on the dynamics of postcolonial Englishes world-wide and on the inextricable link between language and identity.

Equations of State and PVT Analysis Tarek Ahmed,2013-11-25 This title covers a wide range of topics related to the Pressure Volume Temperature (PVT) behavior of complex hydrocarbon systems and documents the ability of Equations of State (EOS) in modeling their behavior. The main objective of this book is to provide the practicing engineer and engineering student with tools needed to solve problems that require a description of the PVT of hydrocarbon systems from their compositions. Because of the dramatic evolution in computational capabilities, petroleum engineers can now study such phenomena as the development of miscibility during gas injection,

compositional gradient as a function of depth and the behavior near critical hydrocarbon systems with more sophisticated EOS models.

A Grammar of Southern Min Weirong Chen, 2020-02-10 Southern Min (also known as Hokkien or Minnan) is a major branch of Chinese spoken mainly in Fujian and Taiwan, but also in Guangdong, Hainan and Hong Kong, as well as in many countries of Southeast Asia. Highly conservative in its linguistic profile, it is considered by many scholars to be a living language fossil due to the preservation of many archaic features that reflect its long-lasting history and culture. Yet to date there has been no comprehensive study of Southern Min using a typological framework, as the tendency is to base analyses on the model of Mandarin Chinese, the standard language. This grammar aims to present a systematic description of the Hui'an variety of Southern Min, mainly based on data collected via naturally occurring conversation. The volume includes four parts: nominal structure, predicate structure, clause structure and complex sentences, as well as a brief overview of phonology. It will have great appeal for heritage speakers, graduate students and scholars in both Chinese linguistics and typology.
