Aided Augmentative Communication for Individuals with Autism Spectrum

Disorders Jennifer B. Ganz, 2014-05-16 Just as autism is a continuum of disorders, it is associated with a broad range of neurodevelopmental, social, and communication deficits. For individuals with autism spectrum disorders (ASD), augmentative and alternative communication (AAC) has a major impact on their daily lives, often reducing the occurrence of challenging behaviors. Issues in evaluation for aided AAC and debates concerning its usability round out the coverage. Readers come away with a deeper understanding of the centrality of communication for clients with ASD and the many possibilities for intervention. Key areas of coverage include: AAC and assessment of people with ASD and CCN. Interdisciplinary issues and collaboration in assessment and treatment. AAC intervention mediated by natural communication partners. Functional communication training with AAC. The controversy surrounding facilitated communication. Sign language versus AAC. Navigating AAC Alison Battye, 2022-09-30 Speech and Language Therapists are assumed to have a knowledge of AAC (Augmentative and Alternative Communication). The reality is that, unless they have had a student clinical placement in this field, they will qualify with very little experience in this area. This book is an approachable guide to AAC and covers the various types, including paper-based and voice-output communication aids. There is guidance on how to assess a person who might need AAC, and how to work collaboratively with those who support the person on a daily basis. The author discusses the importance of core vocabulary alongside a personalised vocabulary. There are pointers for referring to specialised services, signposting families to alternative sources of funding, and making a business case for buying AAC equipment. Written by an expert in the field, this book provides tips and strategies for SLTs who are brand new to AAC, as well as experienced clinicians wanting to gain further confidence in working with this varied client group.

Augmentative and Alternative Communication and Severe Disabilities Erna Alant, Lyle Lloyd, 2005-11-29 Communities and countries who are not affluent or economically and socially disadvantaged present their own set of intervention circumstances that need to be taken into account when planning intervention for people with disabilities particularly those with AAC need. These contexts provide not only professionals, but all partners involved in the intervention

process with unique challenges that require a reevaluation of AAC intervention programmes. This book presents a different perspective on AAC intervention by focusing on the application of various AAC related issues within a poverty context. It is intended for advanced students and professionals across disciplines that are interested in extending their knowledge and critical thinking to advance issues surrounding AAC intervention within a poverty context.

Augmentative and Alternative Communication: Engagement and Participation
Erna Alant, 2016-12-30 Augmentative and Alternative Communication: Engagement and Participation reexamines the basic components of human communication based on the development of meaning between two people and provides a new theoretical framework for integrating the use of Augmentative and Alternative Communication (AAC) strategies into interpersonal interactions. As such, it is an indispensable resource for speech-language pathologists, special education practitioners, and researchers in AAC, as well as for instructors and graduate students in the fields of speech and hearing sciences and special education. The book employs a creative synthesis of engagement (personal involvement) and participation (exchanges) to describe meaning-making and social closeness between partners. This process allows for the acknowledgment of different levels of shared meaning and outlines a novel approach to assessment and intervention. The book also describes the importance of integrating relational (interaction-oriented) as well as

instrumental (goal-oriented) communication functions as essential in maintaining on-going relationships. Most resources in AAC tend to emphasize strategies for enhancing participation, rather than strategies associated with the development of engagement (being with) to enhance communication between communication partners. In contrast, this text uses interactions between users of AAC and their communication partners as a basis to explore the creative synthesis between engagement and participation to provide clinical guidelines for assessment and intervention in both interpersonal and classroom contexts. Key features: A novel theoretical approach focused on engagement and participation as core components in AAC intervention Emphasis on empathic listening skills of both communication partner and user of AAC strategies to facilitate engagement (emotional resonance) between them Guidance for teachers on the benefits of a meaning-based approach to communication in the classroom Application of empathic listening strategies to people with dementia to address an increasing need for care of patients with Alzheimer disease by caregivers and family members Integration of social media and face-to-face interactions as central to developing relationships in AAC interactions
