CLOUD COMPUTING PRANAB KUMAR DAS GUPTA, MANOJ RANJAN NAYAK, SABYASACHI PATTNAIK, 2012-11-19 Development of software projects is a part of the curriculum of under-graduate and postgraduate courses. The main objective of this book is to expose the students and professionals to the latest technology, relevant theory and software development tools. This book serves as a guide to design and develop the cloud computing-based software projects using distributed architecture. It consolidates the theory, upcoming technologies and development tools for the development of two software projects—Outstation Claim Management System (OCMS) and Retirement Benefit Calculation System (RBCS). Both the projects start with the feasibility study to understand and appreciate the problem. After understanding the problem and identifying the suitable software, hardware and network environment, the problem is formally depicted using the entity relationship model and data flow diagrams. This is followed by normalization, creation of tables and procedures. In the book, Oracle, PL/SQL, Internet Developer Suite (IDS) and .Net framework are used to develop the full-fledged GUI-based applications. The book elaborates the problem, providing logic and interface screens to design and develop the projects using any other programming language and GUI tool in which the students are comfortable with. The book also includes a CD-ROM, which contains the source codes of OCMS and RBCS. The book is meant for the undergraduate and postgraduate students of Computer Science, Computer Applications and Information Technology. Besides, it would also be useful to the professionals to enhance their technical skills. After going through this book, the students/professionals will be able to: Work on real-life projects. Implement the SDLC in software projects. Design the data flow diagrams and entity relationship diagrams. Use the database and normalization in software projects. Do the corrective, adaptive and perfective maintenance of a software. Learn the concepts related to IaaS, PaaS and SaaS of Cloud Computing.

Finding Jacob Wetterling Robert M. Dudley, 2016-11-10 In October 1989, 11-year-old Jacob Wetterling was abducted near his home in the small town of St. Joseph, Minnesota. Despite an unparalleled effort to find him, his whereabouts remained a mystery for 27 years--until his kidnapper, arrested on another charge, confessed to Wetterling's murder and led authorities to his buried remains in September 2016. Wetterling's disappearance--and the national media attention that followed--had far-reaching effects. No longer was small-town America considered safe from the exploitation of children. In 1993, Congress passed the Jacob Wetterling Act, setting up a nationwide registry for offenders convicted of crimes against children. Based in part on earlier publications by the author,

this detailed account chronicles the decades-long search for Wetterling and his abductor. Long-overlooked names and information that pointed the way to solving the case are brought to the forefront of the investigation.

Physical Processes in Clouds and Cloud Modeling Alexander P. Khain,Mark Pinsky,2018-04-30 This book presents the most comprehensive and systematic description currently available of both classical and novel theories of cloud processes, providing a much-needed link between cloud theory, observation, experimental results, and cloud modeling. This volume shows why and how modern models serve as a major tool of investigation of cloud processes responsible for atmospheric phenomena, including climate change. It systematically describes classical as well as recent advancements in cloud physics, including cloud-aerosol interaction; collisions of particles in turbulent clouds; and the formation of multiphase cloud particles. As the first of its kind to serve as a practical guide for using state-of-the-art numerical cloud models, major emphasis is placed on explaining how microphysical

processes are treated in modern numerical cloud resolving models. The book will be a valuable resource for advanced students, researchers and numerical model designers in cloud physics, atmospheric science, meteorology, and environmental science.
