Proceedings of the International Conference on Transformations in Engineering Education R. Natarajan, 2014-10-22 This book comprises the proceedings of the International Conference on Transformations in Engineering Education conducted jointly by BVB College of Engineering & Technology, Hubli, India and Indo US Collaboration for Engineering Education (IUCEE). This event is done in collaboration with International Federation of Engineering Education Societies (IFEES), American Society for Engineering Education (ASEE) and Global Engineering Deans' Council (GEDC). The conference is about showcasing the transformational practices in Engineering Education space.

Advances in Engineering Education in the Middle East and North Africa Mahmoud Abdulwahed, Mazen O. Hasna, Jeffrey E. Froyd, 2015-11-18 This book provides a collection of the latest advances in engineering education in the Middle East and North Africa (MENA) region and sheds insights for future development. It is one of the first books to address the lack of comprehensive literature on undergraduate engineering curricula, and stimulates intellectual and critical discourse on the next wave of engineering innovation and education in the MENA region. The authors look at recent innovations through the lens of four topics: learning and teaching, curriculum development, assessment and accreditation, and challenges and sustainability. They also include analyses of pedagogical innovations, models for transforming engineering education, and methods for using technological innovations to enhance active learning. Engineering education topics on issues such as construction, health and safety, urban design, and environmental engineering in the context of the MENA region are covered in further detail. The book concludes with practical recommendations for implementations in engineering education. This is an ideal book for engineering education academics, engineering curriculum developers and accreditation specialists, and deans and leaders in engineering education.

Engineering Design and the Product Life Cycle Kenneth J. Reid, John K. Estell, 2017-11-08 Design, within the context of engineering, is a term that is sometimes difficult to define. Design can be innovative, impressive, and earthshattering, but it can also be observed in the building of simple devices using everyday materials in a classroom environment. This text examines the concept of design, where success means that the designers fulfilled the established requirements, stayed within the specified constraints, and met the evaluation criteria as optimally as possible. Along the way, the reader will walk through an example design process (no, there is not a single, universally accepted design process) that presents relevant terminology and will examine design in a broader context through means of the product life cycle, where a product is followed from its initial definition to the end of its life. Finally, the text attempts to the question of what is good design by exploring some of the fundamental principles associated with design.

International Handbook of E-Learning Volume 2 Mohamed Ally, Badrul H. Khan, 2015-02-20 The International Handbook of e-Learning, Volume 2 provides a comprehensive compendium of implementation and practice in all aspects of e-learning, one of the most significant ongoing global developments in the entire field of education. Covering the integration, challenges, implications, and context-appropriate use of open education networks, blended learning, mobile technologies, social media, and other platforms in a variety of unique international settings, these thirty contributions illustrate the wide-ranging applications and solutions made possible by this rapidly growing new paradigm. Case studies are driven by empirical research and attention to cultural specificity, while future research needs are discussed in relation to both confirmed practice and recent changes in the field. The book will be of interest to anyone seeking to create and sustain meaningful, supportive learning environments within today's anytime, anywhere framework, from teachers, administrators, and policy makers to corporate and government trainers.

Sources for a Better Education Piet Kommers, 2022-02-22 This textbook evolves from the intersection between 'Research', 'Educational Information Technologies' and recent 'Best Practices'. It offers diplomacy and erudite rhetoric in order to harvest from innovation projects and see how new professional needs for teachers are emerging day by day. The volume launches the compact background for the 21st century education that every teacher faces after being in charge for 3 or 6 years after pre-service training. 'Sources for a better education' refers to the deep understanding and to the incentives for encouraging teachers to leave the comfort zone and experiment the next steps into a further sophisticated professionalism, without the threat of feeling in a 'Dilemma'. The first candidate for extending one's teaching effectiveness is to tailor one's teaching to the test to be expected. 'Teaching to the Test' is an understandable tactic, however it endangers the students' full understanding of underlying concepts and analogies. The second candidate for professionalism is the deeper layer of knowledge on how curricular domains are related. In simpler terms: better teachers know how to 'bridge' topics and subjects so that students develop a deeper understanding on the patterns and structure in knowledge. The 21st century education prioritizes higher degrees of flexible-, divergent and abstract thinking, so that creative problem solving comes into reach. ICT tools for making prior knowledge explicit is a major example on how learners harvest upon prior knowledge, thinking and intuition. The third source for a better education is the courage to envisage one's meta knowledge in order to see patterns in learning and understanding. The more conscious prior knowledge gets decompiled into genetic metaphors; the better future learning can be anticipated. The fourth asset for meta-cognitive skills is the wide spectrum of tools that the web offers for building knowledge infra-structures so that knowledge becomes transformed into problem solving skills; the availability of knowledge is no longer sufficient for finding creative and authentic solutions in future situations. This is the case for both students and teachers. By tradition, the bottom-up strategy from reproductive factual learning up to the levels of problem solving and creative thinking has been favoured. The 'one-click away' access to information on the web asks a more strategic attitude from learners and practitioners to cope with the periphery between known and unknown, so that a more effective meta-cognition develops. The fifth stimulus for more effective learning is the expanding impact of social media. Social media tend to intimidate learners with incomplete understanding to jump on biases as delivered through political and conspiracy agendas. This book aims at the challenge to build upon learners' existential needs and developing interest for a longer-term learning perspective. "Renaissance man and philosopher Piet Kommers presents us with an interesting question: What makes education exciting? His book covers a range of lessons learnt through research and practice, covering philosophies and paradoxes, ranging from learning to learn to machine learning for learning. In 35 chapters he takes us on an exciting, comprehensive journey of just about every conceivable aspect of technology and education. This is a must-have for every 21st Century bookshelf!" By: Johannes Cronjé, professor of Digital Teaching and Learning in the Department of Information Technology at the Cape Peninsula University of Technology, South Africa. "Piet Kommers has in 400 pages provided an overview of teaching based on practical experience. It is not a summary of pedagogic models, but a guide to important factors in how to motivate students and thus improve their learning. New technologies changes teaching, and we need to understand how application of such technologies can improve the learning. This book provides such knowledge and I wish I had it when I started teaching at university many years ago." By: Jan Frick, Professor Business School, University of Stavanger, Norway. Piet Kommers delivers a very thorough book with a holistic perspective on Learning Technologies. This book is a result of many years of experience that the author has in Higher Education. It comprises lessons learned from the author's professional career, including inputs from European Union research projects, as well as diversified interactions with a wide range of Peoples and Cultures. The result is a unique perspective that is a must-read for anyone interested in Learning Technologies, past, present, and future! By: Pedro Isaías, associate professor at the Information Systems & Technology Management School of The University of New South Wales (UNSW - Sydney), Australia. "Distinguished Professor and Thinker Dr. Piet Kommers presents the academic community with a new horizon on education that reflects the current and future technology trends in the e-Learning and Fast Internet ubiquity. The Book discusses the current and

most recent advances in research and application of most effective learning methods in conjunction with the future directions in machine learning in support of learning. The Book's 35 chapters present cutting-edge technologies and state-of-the-art learning methods in support of best educational practices and the student's best learning experience. The Book is most valuable asset to educator's community pursuing the mission of excellence in the Third Millennium!" By: Eduard Babulak, Professor, Computational Sciences, Liberty University, Lynchburg, USA. Well-known scientist, (e-)learning expert and philosopher Piet Kommers presents us with an interesting question: What makes education exciting? His book covers a range of lessons learnt through research and practice, covering philosophies and paradoxes, ranging from 'learning to learn' to 'machine learning for learning'. In 35 chapters he takes us on an exciting, comprehensive journey of just about every conceivable aspect of technology and education. This is an interesting and useful publication for all educators as well as learners and must-have for every 21st Century bookshelf! By: Eugenia Smyrnova-Trybulska, Dr. hab., associate professor, Institute of Pedagogy, Faculty of Art and Sciences of Education, University of Silesia in Katowice, Poland. "The book presents a mosaic of assets reflecting the vast international experience in research and realization of learning technologies of the author, honourable professor of the UNESCO Chair in New information technologies in education for all, Piet Kommers. Describing various aspects of learning strategies, approaches, techniques and technologies in a concise way, he engages the readers into the mental construction of a big picture and makes them reconsider routine processes of teaching and learning. Exciting and thought-provoking reading for educators, researchers, and devoted learners." By: professor Volodymyr Gritsenko, Director of the International Research and Training Centre for Information Technologies and Systems, National Academy of Sciences and Ministry of Education and Science of Ukraine, Head of the UNESCO Chair.

Introduction to Engineering Quamrul H. Mazumder, 2018-09-03 Developed for the Ultimate Introductory Engineering Course Introduction to Engineering: An Assessment and Problem-Solving Approach incorporates experiential, and problem- and activity-based instruction to engage students and empower them in their own learning. This book compiles the requirements of ABET, (the organization that accredits most US engineering, computer science, and technology programs and equivalency evaluations to international engineering programs) and integrates the educational practices of the Association of American Colleges and Universities (AAC&U). The book provides learning objectives aligned with ABET learning outcomes and AAC&U high-impact educational practices. It also identifies methods for overcoming institutional barriers and challenges to implementing assessment initiatives. The book begins with an overview of the assessment theory, presents examples of real-world applications, and includes key assessment resources throughout. In addition, the book covers six basic themes: Use of assessment to improve student learning and educational programs at both undergraduate and graduate levels Understanding and applying ABET criteria to accomplish differing program and institutional missions Illustration of evaluation/assessment activities that can assist faculty in improving undergraduate and graduate courses and programs Description of tools and methods that have been demonstrated to improve the quality of degree programs and maintain accreditation Using high-impact educational practices to maximize student learning Identification of methods for overcoming institutional barriers and challenges to implementing assessment initiative A practical guide to the field of engineering and engineering technology, Introduction to Engineering: An Assessment and Problem-Solving Approach serves as an aid to both instructor and student in developing competencies and skills required by ABET and AAC&U.

Shaping Our World Gretar Tryggvason, 2011-11 Engineering education is currently on the verge of a major transformation. However, while the need has been much discussed and several proposals for change have been put forward, relatively little focus has been put on actual implementation of the proposed changes. This book examines a program that has a long history of experimentation in engineering education. Written by experts on the subject, it describes specific topics with each chapter focusing on a specific innovation that has been carried out and explaining the educational pedagogy the learning benefit, as well as the transferability of the approach--

Proceedings of the IUTAM Symposium on Optimal Guidance and Control for Autonomous Systems 2023 Dilmurat Azimov, 2024-01-05 This book showcases a collection of papers that present cutting-edge studies, methods, experiments, and applications in various interdisciplinary fields. These fields encompass optimal control, guidance, navigation, game theory, stability, nonlinear dynamics, robotics, sensor fusion, machine learning, and autonomy. The chapters reveal novel studies and methods, providing fresh insights into the field of optimal guidance and control for autonomous systems. The book also covers a wide range of relevant applications, showcasing how optimal guidance and control techniques can be effectively applied in various domains, including mechanical and aerospace engineering. From robotics to sensor fusion and machine learning, the papers explore the practical implications of these techniques and methodologies.
