These are the Top 50 Sustainability Books as voted for by the University of Cambridge Programme for Sustainability Leadership's alumni network of over 3,000 senior leaders from around the world. In addition to profiles of all 50 titles, many of the authors share their most recent reflections on the state of the world and the ongoing attempts by business, government and civil society to create a more sustainable future. Many of these authors have become household names in the environmental, social and economic justice movements – from Rachel Carson, Ralph Nader and E.F. Others, such as Aldo Leopold, Thomas Berry and Manfred Max-Neef, are relatively undiscovered gems, whose work should be much more widely known. Energy Peter R. Odell, 1974

*Civil Space Technology Initiative*, 1990

**Energy Storage** Robert Huggins, 2010-08-12 Introduction Energy is necessary for a number of reasons, the most basic and obvious involve the preparation of food and the provision of heat to make life comfortable, or at least,

bearable. Subsequently, a wide range of technological uses of energy have emerged and been developed, so that the availability of energy has become a central issue in society. The easiest way to acquire useful energy is to simply find it as wood or a hydrocarbon fossil fuel in nature. But it has often been found to be advantageous to convert what is simply available in nature into more useful forms, and the processing and conversion of raw materials, especially petrochemicals have become a very large industry. Wood has been used to provide heat for a great many years. In some cases, it can be acquired as needed by foraging, or cutting, followed by simple collection. When it is abundant there is relatively little need for it to be stored. However, many societies have found it desirable to collect more wood than is immediately needed during warm periods during the year, and to store it up for use in the winter, when the needs are greater, or its collection is not so convenient. One can still see this in some locations, such as the more remote communities in the Alps, for example. One might think of this as the oldest and simplest example of energy storage.

Tyre Recycling Valerie Shulman, 2004 This is an expert overview on the topic of tyre recycling. It summarises current practices and the factors that have contributed to their growth and efficacy as viable, economically and environmentally sound methods of dealing with post-consumer tyres. The primary area of study of this report is the EU, but reports from the US have also been cited. Statistics from the EU markets, which illustrate changes in the industry since the inception of the European Tyre Recycling Association a decade ago are incorporated. Around 400 references with abstracts from recent global literature accompany this review, sourced from the Polymer Library, to facilitate further reading. A subject index and a company index are included.

Identity Process Theory Rusi Jaspal, Glynis M. Breakwell, 2014-04-17 We live in an ever-changing social world, which constantly demands adjustment to our identities and actions. Advances in science, technology and medicine, political upheaval, and economic development are just some examples of social change that can impact upon how we live our lives, how we view ourselves and each other, and how we communicate. Three decades after its first appearance, identity process theory remains a vibrant and useful integrative framework in which identity, social action and social change can be collectively examined. This book presents some of the key developments in this area. In eighteen chapters by world-renowned social psychologists, the reader is introduced to the major social psychological debates about the construction and protection of identity in face of social change. Contributors address a wide range of contemporary topics - national identity, risk, prejudice, intractable conflict and ageing - which are examined from the perspective of identity process theory.

*Theory Of Superconductivity* J. Robert Schrieffer, 2018-03-05 Theory of Superconductivity is primarily intended to serve as a background for reading the literature in which detailed applications of the microscopic theory of superconductivity are made to specific problems.

Evening Thoughts Thomas Berry, 2010-07-01 Essays on our spiritual role in the fate of the planet from "the most provocative figure among the new breed of eco-theologians" (Newsweek). Among the contemporary voices for the

Earth, none resonates like that of cultural historian Thomas Berry. His teaching and writings have inspired a generation's thinking about humankind's place in the Earth community and the universe, engendering widespread critical acclaim and a documentary film on his life and work. This new collection of essays, from various years and occasions, expands and deepens ideas articulated in his earlier writings and also breaks new ground. Berry opens our eyes to the full dimensions of the ecological crisis, framing it as a crisis of spiritual vision. Applying his formidable erudition in cultural history, science, and comparative religions, he forges a compelling narrative of creation and communion that reconciles modern evolutionary thinking and traditional religious insights concerning our integral role in Earth's society. While sounding an urgent alarm at our current dilemma, Berry inspires us to reclaim our role as the consciousness of the universe and thereby begin to create a true partnership with the Earth community. With *Evening Thoughts*, this wise elder has lit another beacon to lead us home. "Thomas Berry is an exemplar in a tradition that includes a diverse group of spiritually radiant individuals (Gandhi, the monk Thomas Merton, the Lakota elder Black Elk), visionaries (Jacques Ellul, Terry Tempest Williams, Rachel Carson), and writers (Wendell Berry, Gary Snyder, Rebecca Solnit, Loren Eiseley)." –Barry Lopez, author of *Arctic Dreams*
