In recent years, the number of accelerator programs around the world has grown at an incredible rate, propelling startups such as AirBnB, Uber, DropBox, Reddit, and others — many to billion-dollar valuations. The number of accelerators, the differences in accelerator program offerings and the unique benefits and costs of different accelerator locations makes choosing the right accelerator a challenge. Selecting the wrong accelerator, failing to be accepted in the right one, or not fully taking advantage of all the accelerator has to offer can be costly, sometimes fatal. With the stakes so high, entrepreneurs need to understand all their options, choose carefully and do the right things to maximize their chances of success. Startup Accelerators is the go to guide for any entrepreneur, providing a firsthand look into the acceptance criteria and inner workings of different accelerator programs. Accelerator Technology Sören Möller, 2020-12-02 This book explores the physics, technology and applications of particle accelerators. It illustrates the interconnections between applications and basic physical principles, enabling readers to better understand current and upcoming technologies and see beyond the paradigmatic borders of the individual fields. The reader will discover why accelerators are no longer just toys for scientists, but have also become modern and efficient nuclear workhorses. The book starts with an introduction to the relevant technologies and radiation safety aspects of accelerating electrons and ions from several keV to roughly 250 MeV. It subsequently describes the physics behind the interactions of these particle beams with matter. Mathematical descriptions and state-of-the-art computer models of energy-loss and nuclear interactions between the particle beams and targets round out the physics coverage. On this basis, the book then presents the most important accelerator applications in science, medicine, and industry, explaining and comparing more than 20 major application fields, encompassing semiconductors, cancer treatment, and space exploration. Despite the disparate fields involved, this book demonstrates how the same essential technology and physics connects all of these applications.

Reviews Of Accelerator Science And Technology - Volume 9: Technology And Applications Of Advanced Accelerator Concepts Chao Alexander Wu, Chou Weiren, 2017-02-20 Since its invention in the 1920s, particle accelerators have made tremendous progress in accelerator science, technology and

applications. However, the fundamental acceleration principle, namely, to apply an external radiofrequency (RF) electric field to accelerate charged particles, remains unchanged. As this method (either room temperature RF or superconducting RF) is approaching its intrinsic limitation in acceleration gradient (measured in MeV/m), it becomes apparent that new methods with much higher acceleration gradient (measured in GeV/m) must be found for future very high energy accelerators as well as future compact (table-top or room-size) accelerators. This volume introduces a number of advanced accelerator concepts (AAC) — their principles, technologies and potential applications. For the time being, none of them stands out as a definitive direction in which to go. But these novel ideas are in hot pursuit and look promising. Furthermore, some AAC requires a high power laser system. This has the implication of bringing two different communities — accelerator and laser — to join forces and work together. It will have profound impact on the future of our field. Also included are two special articles, one on Particle Accelerators in China' which gives a comprehensive overview of the rapidly growing accelerator community in China. The other features the person-of-the-issue who was well-known nuclear physicist Jerome Lewis Duggan, a pioneer and founder of a huge community of industrial and medical accelerators in the US.

Reviews Of Accelerator Science And Technology - Volume 10: The Future Of Accelerators Chao Alexander Wu,Chou Weiren,2019-09-09 Volume 10 in the series of the annual journal Reviews of Accelerator Science and Technology (RAST), will be its final volume. Its theme is 'The Future of Accelerators'. This volume, together with previous 9 volumes, gives readers a complete picture as well as detailed technical information about the accelerator field, and its many driving and fascinating aspects.This volume has 17 articles. The first 15 articles have a different approach from the previous volumes. They emphasize the more personal views, perspectives and advice from the frontier researchers rather than provide a review or survey of a specific subfield. This emphasis is more aligned with the theme of the current volume. The other two articles are dedicated respectively to Leon Lederman and Burton Richter, two prominent leaders of our community who left us last year.

Corporate Accelerator Programs Sandra-Luisa Moschner,2021-02-24 Corporate Accelerators sind Organisationen zur zeitlich begrenzten Unterstützung von Startups, die von etablierten Unternehmen betrieben werden. Sie imitieren das Model von unabhängigen Accelerators, verfolgen jedoch nicht zwangsläufig das Ziel finanziellen Zugewinns, sondern auch strategische Ziele. Die vorliegende Arbeit hat das Ziel, spezifische Förderpraktiken dieser Programme sowie deren Effekt auf den Startup-Erfolg zu untersuchen. Die Studienergebnisse identifizieren Corporate Accelerator-spezifische Praktiken, die einen

positiven Einfluss auf den Startup-Erfolg haben. Die Ergebnisse zeigen zudem, dass die Unterstützung je nach Motiv des etablierten Unternehmens (symbolisch vs. substantiell) variiert. Die resultierenden Ergebnisse liefern relevante Implikationen sind für etablierte Unternehmen, Corporate Accelerator Manager und Startups. Corporate accelerators are intermediary organizations implemented by incumbent firms to support startups with various resources over a short period of time. Although they are built upon the model of independent accelerators, corporate accelerators do not necessarily aim for financial benefits but for strategic objectives. This thesis examines how corporate accelerators support participating startups and how this support impacts subsequent startups' success based on qualitative and quantitative data. The findings of the study identify corporate accelerator-specific practices that positively influence the success of startups. Further the findings indicate that the extent of support varies, as incumbents initiate the programs as a result of substantive and/or symbolic motives. The findings therefore provide relevant implications for incumbents, corporate accelerator managers and startups.

Introduction to Accelerator Dynamics Stephen Peggs, Todd Satogata, 2017-08-31 How does a particle accelerator work? The most direct and intuitive answer focuses on the dynamics of single particles as they travel through an accelerator. Particle accelerators are becoming ever more sophisticated and diverse, from the Large Hadron Collider (LHC) at CERN to multi-MW linear accelerators and small medical synchrotrons. This self-contained book presents a pedagogical account of the important field of accelerator physics, which has grown rapidly since its inception in the latter half of the last century. Key topics covered include the physics of particle acceleration, collision and beam dynamics, and the engineering considerations intrinsic to the effective construction and operation of particle accelerators. By drawing direct connections between accelerator technology and the parallel development of computational capability, this book offers an accessible introduction to this exciting field at a level appropriate for advanced undergraduate and graduate students, accelerator scientists, and engineers.

Reviews of Accelerator Science and Technology Alexander W Chao, Weiren Chou, 2014-02-26 As particle accelerators strive for ever increasing performance, high intensity particle beams become one of the critical demands requested across the board by a majority of accelerator users (proton, electron and ion) and for most applications. Much effort has been made by our community to pursue high intensity accelerator performance on a number of fronts. Recognizing its importance, we devote this volume to Accelerators for High Intensity Beams. High intensity accelerators have become a frontier and a network for innovation. They are responsible for many scientific discoveries and technological breakthroughs that have changed our way of life, often taken for granted. A wide range of topics is covered in the fourteen articles in this volume. Challenges And Goals For Accelerators In The Xxi Century Stephen Myers, Oliver Bruning, 2016-02-26 The past 100 years of accelerator-based research have led the field from first insights into the structure of atoms to the development and confirmation of the Standard Model of physics. Accelerators have been a key tool in developing our understanding of the elementary particles and the forces that govern their interactions. This book describes the past 100 years of accelerator development with a special focus on the technological advancements in the field, the connection of the various accelerator projects to key developments and discoveries in the Standard Model, how accelerator technologies open the door to other applications in medicine and industry, and finally presents an outlook of future accelerator projects for the coming decades.

Accelerators Mike Wright, 2018 Accelerators are a rapidly growing new form of organization that aim to stimulate entrepreneurship through intensive, limited-period educational programs, including mentoring and networking for the cohort of start-up participants selected for each program, to improve their ability to attract investment at the end of the program. Drawing on novel evidence from across the world, this is the first book to provide rigorous analysis of the nature and effectiveness of accelerators that will be invaluable for researchers, policymakers and entrepreneurs.

Reviews of Accelerator Science and Technology Alexander W Chao, Weiren Chou, 2012-02-20 Since their debut in the late 1920s, particle accelerators have evolved into a backbone for the development of science and technology in modern society. Of about 30,000 accelerators at work in the world today, a majority is for applications in industry (about 20,000 systems worldwide). There are two major categories of industrial applications: materials processing and treatment, and materials analysis. Materials processing and treatment includes ion implantation (semi-conductor materials, metals, ceramics, etc.) and electron beam irradiation (sterilization of medical devices, food pasteurization, treatment of carcasses and tires, cross-linking

of polymers, cutting and welding, curing of composites, etc.). Materials analysis covers ion beam analysis (IBA), non-destructive detection using photons and neutrons, as well as accelerator mass spectrometry (AMS). All the products that are processed, treated and inspected using beams from particle accelerators are estimated to have a collective value of US\$500 billion per annum worldwide. Accelerators are also applied for environment protection, such as purifying drinking water, treating waste water, disinfecting sewage sludge and removing pollutants from flue gases. Industrial accelerators continue to evolve, in terms of new applications, qualities and capabilities, and reduction of their costs. Breakthroughs are encountered whenever a new product is made, or an existing product becomes more cost effective. Their impact on our society continues to grow with the potential to address key issues in economics or the society of today. This volume contains fourteen articles, all authored by renowned scientists in their respective fields.
