Man-made Catastrophes and Risk Information Concealment Dmitry Chernov, Didier

Sornette, 2015-10-27 This book discusses the risks of information concealment in the context of major natural or industrial disasters – offering detailed descriptions and analyses of some 25 historical cases (Three Mile Island nuclear accident, Bhopal disaster, Challenger Space Shuttle explosion, Chernobyl nuclear disaster, Deepwater Horizon oil spill, Fukushima-Daiichi nuclear disaster, Enron's bankruptcy, Subprime mortgage crisis, Worldwide Spanish flu and SARS outbreaks, etc.) and applying these insights to selected on-going cases where such information concealment is suspected. Some successful examples of preventive anti-concealment practice are also presented. In the book, the term 'concealment' is used to represent the two distinct behaviors uncovered in the investigations: (i) facts and information about an organization and its functioning being hidden from those that need them – here the concealment can be due to various factors, such as complexity and miscommunication, to name but two – and (ii) the conscious and deliberate action of keeping important information secret or misrepresenting it. This second meaning makes up a surprisingly important part of the evidence presented. Accordingly, emphasis has been put on this second aspect and the approach is more

pragmatic than academic, remaining focused on evidence-based practical and useful factors. It raises awareness and provides valuable lessons for decision-makers, risk specialists and responsible citizens alike. This work is also intended as a fact-based reference work for future academic and scholarly investigations on the roots of the problem, in particular regarding any psychological or sociological modeling of human fallibility.

ICMLG2013-Proceedings of the International Conference on Management, Leadership and Governance Vincent Ribiere, Lugkana Worasinchai, 2013-07-02

Rising in the East Rachel Keeton, 2011 In the west, the design of new towns has always been based on an ideal model in accordance with the ideas of that moment. In the case of the latest generation of new towns in Asia, however, only quantitative and marketing principles seem to play a role: the number of square metres, dwellings or people, or the greenest, most beautiful or most technologically advanced town. *Rising in the east* shows which design principles these premises are based on.

Cloud Computing Nikos Antonopoulos, Lee Gillam, 2010-07-16 Cloud computing continues to emerge as a subject of substantial industrial and academic interest. Although the meaning and scope of "cloud computing" continues to be debated, the current notion of clouds blurs the distinctions between grid services, web services, and data centers, among other areas. Clouds also bring considerations of lowering the cost for relatively bursty applications to the fore. Cloud Computing:

Principles, Systems and Applications is an essential reference/guide that provides thorough and timely examination of the services, interfaces and types of applications that can be executed on cloud-based systems. The book identifies and highlights state-of-the-art techniques and methods for designing cloud systems, presents mechanisms and schemes for linking clouds to economic activities, and offers balanced coverage of all related technologies that collectively contribute towards the realization of cloud computing. With an emphasis on the conceptual and systemic links between cloud computing and other distributed computing approaches, this text also addresses the practical importance of efficiency, scalability, robustness and security as the four cornerstones of quality of service. Topics and features: explores the relationship of cloud computing to other distributed computing paradigms, namely peer-to-peer, grids, high performance computing and web services; presents the principles, techniques, protocols and algorithms that can be adapted from other distributed computing paradigms to the development of successful clouds; includes a Foreword by Professor Mark Baker of the University of Reading, UK; examines current cloud-practical applications and highlights early deployment experiences; elaborates the economic schemes needed for clouds to become viable business models. This book will serve as a comprehensive reference for researchers and students engaged in cloud computing. Professional system architects, technical managers, and IT consultants will also find this unique text a

practical guide to the application and delivery of commercial cloud services. Prof. Nick Antonopoulos is Head of the School of Computing, University of Derby, UK. Dr. Lee Gillam is a Lecturer in the Department of Computing at the University of Surrey, UK.

Building Trust in Government G. Shabbir Cheema, Vesselin Popovski, 2010 The ability of governments and the global community to achieve the Millennium Development Goals, ensure security, and promote adherence to basic standards of human rights depends on people's trust in their government. However, public trust in government and political institutions has been declining in both developing and developed countries in the new millennium. One of the challenges in promoting trust in government is to engage citizens, especially the marginalized groups and the poor, into the policy process to ensure that governance is truly representative, participatory, and benefits all.

Shaping the Future of ICT Ibrahiem M. M. El Emery, Anna Brzozowska, 2017-09-19 The International Conference on Communications, Management, and Information Technology (ICCMIT'16) provides a discussion forum for scientists, engineers, educators and students about the latest discoveries and realizations in the foundations, theory, models and applications of systems inspired on nature, using computational intelligence methodologies, as well as in emerging areas related to the three tracks of the conference: Communication Engineering, Knowledge, and Information Technology. The best 25 papers to

be included in the book will be carefully reviewed and selected from numerous submissions, then revised and expanded to provide deeper insight into trends shaping future ICT.

Several optimization algorithms for big data including convergent parallel algorithms, limited memory bundle algorithm, diagonal bundle method, convergent parallel algorithms, network analytics, and many more have been explored in this book.

Exploring Services Science Mehdi Snene, Jolita Ralyte, Jean-Henry Morin, 2011-08-03 This book contains the refereed proceedings of the Second International Conference on Exploring Services

Science (IESS) that was held in Geneva, Switzerland, in February 2010. Based on the previous edition and the momentum in this emerging and exciting field, IESS 2011 offered academics, researchers, and practitioners from various disciplines an exploratory platform to communicate and share their results and experiences. The 17 full and 2 short papers accepted for IESS were selected from 47 submissions and cover the whole life cycle of service development (including service innovation, service design, service composition, and service sustainability) as well as the application of services in information technology, businesses, and public administration.

Swipe to Unlock Neel Mehta, Parth Detroja, Aditya Agashe, 2017 WANT A NON-CODING JOB AT A TECH COMPANY? Interested in product management, marketing, strategy, or business development? The tech industry is the place to be: nontechnical employees at tech companies outnumber their engineering counterparts almost 3 to 1 (Forbes, 2017). You might be worried that your lack of coding skills or tech industry knowledge will hold you back. But here's the secret: you don't need to learn how to code to break into the tech industry. Written by three former Microsoft PMs, **Swipe to Unlock** gives you a breakdown of the concepts you need to know to crush your interviews, like software development, big data, and internet security. We'll explain how Google's ad targeting algorithm works, but Google probably won't ask you how to explain it in a non-technical interview. But they might ask you how you could increase ad revenue from a particular market segment. And if

you know how Google's ad platform works, you'll be in a far stronger position to come up with good growth strategies. We'll show you how Robinhood, an app that lets you trade stocks without commission, makes money by earning interest on the unspent money that users keep in their accounts. No one will ask you to explain this. But if someone asks you to come up with a new monetization strategy for Venmo (which lets you send and receive money without fees), you could pull out the Robinhood anecdote to propose that Venmo earn interest off the money sitting in users' accounts. We'll talk about some business cases like why Microsoft acquired LinkedIn. Microsoft interviewers probably won't ask you about the motive of the purchase, but they might ask you for ideas to improve Microsoft Outlook. From our case study, you'll learn how the Microsoft and LinkedIn ecosystems could work together, which can help you craft creative, impactful answers. You could propose that Outlook use LinkedIn's social graph to give salespeople insights about clients before meeting them. Or you could suggest linking Outlook's organizational tree to LinkedIn to let HR managers analyze their company's hierarchy and figure out what kind of talent they need to add. (We'll further explore both ideas in the book.) Either way, you're sure to impress. Learn the must know concepts of tech from authors who have received job offers for Facebook's Rotational Product Manager, Google's Associate Product Marketing Manager, and Microsoft's Program Manager to get a competitive edge at your interviews!

Carbonated Soft Drinks Dr. David Steen, Philip R. Ashurst, 2008-04-15 The market for carbonated beverages has grown dramatically over recent years in most countries, and this growth has required changes in the way factories are run. Like other food products, soft drinks are required to be produced under stringent hygiene conditions. Filling technology has progressed rapidly to meet the needs of manufacturers and consumers alike. Packaging choices have changed and there have been improvements in closure design. This book provides an overview of carbonated soft drinks production in the early part of the twenty first century, presenting the latest information on carbonation and filling methods. There are also chapters on bottle design, can making, general packaging considerations, production and distribution. A final chapter deals with quality assurance, and environmental and legislative issues. Detailed references provide opportunity for further reading in more specialised areas. The book is aimed at graduates in food science, chemistry, microbiology and engineering who are considering a career in the soft drinks industry, as well as technical staff already employed within the industry and associated suppliers.

Action Inquiry William R. Torbert, 2004-06-13 oAction inquiry is a fresh approach to learning leadership in the midst of action. This highly accessible process takes each of us beyond muddling through daily dilemmas to exercising transforming power at key moments and more timely action in general. Bill Torbert and Associates lead you through more and more sophisticated

action-logicso-strategies for analyzing the world and reacting to it-until you are able to practice action inquiry continually. Speaking to everyone from new managers to CEOs to world leaders, real-life stories of leadership and organizational transformations show how action inquiry increases personal integrity, relational mutuality, company profitability, and long-term organizational and environmental sustainability.

Recreating Asia Frank-Jürgen Richter, Pamela C. M. Mar, 2002-11-07 The World Economic Forum is an international organization committed to improving the state of the world. It provides a framework for the world's leaders to address global issues. This work offers an insight into how Asia is managing its own political change and national governance challenges. It is based on discussions held during the East Asia Economic Summit, which took place in Hong Kong, October 2001. The summit, an annual event of the WEF, brings together around 800 business leaders, heads of state and government ministers, commentators and experts.

Integrating Services in South Asia Rupa Chanda, 2011 Finally, the book considers negotiating priorities in different services and on cross-cutting issues to point out possible modalities for negotiation.

Overcoming Indifference Klaus Schwab, 1995-10 Many brief essays by Nobel Prize winners, statesmen, scholars, and CEOs discuss challenges facing world leaders, and potential solutions. Topics include the disintegration of value systems, maintaining global security, overcoming

discrimination, sustainability, the new information society, employment, national policy-making, and reengineering the corporation. There is little in the way of bibliographic material and references. Annotation copyright by Book News, Inc., Portland, OR

Strain Variation in the Mycobacterium tuberculosis Complex: Its Role in Biology, Epidemiology and Control Sebastien

Gagneux, 2018-08-31 Until about 10 years ago, the general view in the field was that Mycobacterium tuberculosis, the causative agent of human tuberculosis was a "clone" with insufficient natural sequence variation between clinical strains to be considered biologically and epidemiologically "relevant". This view has now changed quite dramatically thanks to the -omics revolution, particularly the advent of next generation DNA sequencing. Large-scale comparative genomic studies over the last few years have revealed that M. tuberculosis clinical strains are more genetically diverse than appreciated previously. Moreover, an increasing number of experimental and epidemiological studies are showing that this genetic diversity also translates into important phenotypic variation. Taken together, these findings have led to a paradigm shift, such that currently phylogenetic diversity among M. tuberculosis clinical strains is being considered in the development of new tools to combat tuberculosis. The purpose of this book is to bring together a series of contributions from some of the most influential groups working on various aspects of M.

tuberculosis diversity, and which through their work have contributed to the this paradigm shift. This includes authors focusing on the evolution of *M. tuberculosis* in relation to other members of the *M. tuberculosis* complex adapted to animals, the co-evolution between *M. tuberculosis* and humans, the phenotypic consequences of strains diversity both from an experimental and epidemiological point of view, the ecology and evolution of drug resistant tuberculosis, the diversity and evolution of the BCG vaccine strains, and the use of mathematical modelling to study strain diversity and drug resistance in human tuberculosis. No such book has ever been published, and given the paradigm shift described above, this book will be a valuable resource both for established researchers as well as new scientists, clinicians and public health officials joining the growing field of tuberculosis research.
