RDA: Resource Description and Access: 2013 Revision Joint Steering Committee (JSC),American Library Association (ALA),Canadian Library Association (CLA),Chartered Institute of Library and Information Professionals (CILIP, UK),Deutsche Nationalbibliothek,Library of Congress (US),2013-10-28 This e-book contains the 2013 Revision of RDA: Resource Description and Access, and includes the July 2013 Update. This e-book offers links within the RDA text and the capability of running rudimentary searches of RDA, but please note that this e-book does not have the

full range of content or functionality provided by the subscription product RDA Toolkit. Included: A full accumulation of RDA— the revision contains a full set of all current RDA instructions. It replaces the previous version of RDA Print as opposed to being an update packet to that version. RDA has gone through many changes since it was first published in 2010. Cataloging practice described by RDA has not changed dramatically due to the changes above, but nearly every page in RDA Print was impacted by the changes, with the result that an RDA Print update packet would require nearly as many pages as the full revision. The most current RDA— the revision contains all changes to RDA up to and including the 2013 RDA Update approved by the JSC. Annually the JSC considers proposals to update, enhance and maintain RDA as a current cataloging standard. These updates can and often do change the cataloging process as described by RDA. The JSC also periodically issues changes to RDA to fix errors and to clarify meaning. These changes do not typically change cataloging practice as described by RDA. Reworded RDA— the revision includes the reworded version of RDA instructions. To improve readability and comprehension of complex instructions, RDA has been edited and reworded since its original release. The rewording was carried out by the JSC, RDA Copy Editor, and reviewed by the U.S. RDA Test Coordinating Committee.

  House of Commons – Business, Innovation and Skills Committee: Open Access – HC 99-I Great Britain: Parliament: House of Commons: Business, Innovation and Skills Committee,2013-09-10 The Government's commitment to increasing access to published research findings and its desire to achieve full open access are welcomed in this report from the Business, Innovation and Skills Committee. However, whilst Gold open access – where authors publish their articles in an open access journal that provides free immediate open access to all of its articles on the publisher's website – is a desirable ultimate goal, focusing on it during the transition to a fully open access world is a mistake. The Government and Research Council UK should reconsider their preference for Gold open access during the five year transition period, and give due regard to the evidence of the vital role that Green open access and repositories have to play as the UK moves towards full open access. (Authors opting for Green open access publish in any subscription journal, and then make

their peer-reviewed final draft freely accessible online by self-archiving or depositing the article in a repository (either institutional or disciplinary) upon acceptance for publication.) Other recommendations include: promotion of standardisation and compliance across subject and institutional repositories; mitigation against the impact on universities of paying Article Processing Charges out of their own reserves; introduce a reduced VAT rate for e-journals; non-disclosure clauses should not be used in publishing contracts that include the use of public funds; BIS must review its consultation processes to ensure that lessons are learned from the lack of involvement of businesses, particularly SMEs, in the formation of open access policy

  Deploying Identity and Access Management with Free Open Source Software Michael Schwartz,2018-06-02 Learn to leverage existing free open source software to build an identity and access management (IAM) platform that can serve your organization for the long term. With the emergence of open standards and open source software, it's now easier than ever to build and operate your own IAM stack The most common culprit of the largest hacks has been bad personal identification. In terms of bang for your buck, effective access control is the best investment you can make: financially, it's more valuable to prevent than to detect a security breach. That's why Identity and Access Management (IAM) is a critical component of an organization's security infrastructure. In the past, IAM software has been available only from large enterprise software vendors. Commercial IAM offerings are bundled as "suites" because IAM is not just one component: It's a number of components working together, including web, authentication, authorization, and cryptographic and persistence services. Deploying

Identity and Access Management with Free Open Source Software documents a recipe to take advantage of open standards to build an enterprise-class IAM service using free open source software. This recipe can be adapted to meet the needs of both small and large organizations. While not a comprehensive guide for every application, this book provides the key concepts and patterns to help administrators and developers leverage a central security infrastructure. Cloud IAM service providers would have you believe that managing an IAM is too hard. Anything unfamiliar is hard, but with the right road map, it can be mastered. You may find SaaS identity solutions too rigid or too expensive. Or perhaps you don't like the idea of a third party holding the credentials of your users—the keys to your kingdom. Open source IAM provides an alternative. Take control of your IAM infrastructure if digital services are key to your organization's success. What You'll Learn Why to deploy a centralized authentication and policy management infrastructure Use: SAML for single sign-on, OpenID Connect for web and mobile single sign-on, and OAuth2 for API Access Management Synchronize data from existing identity repositories such as Active Directory Deploy two-factor authentication services Who This Book Is For Security architects (CISO, CSO), system engineers/administrators, and software developers
