Railroad Accident Report Collision of Metrolink Train 111 with Union Pacific Train Lof65-12 Chatsworth, California September 12, 2008 National Transportation Safety Board,2015-06-22 About 4:22 p.m., Pacific daylight time, on Friday, September 12, 2008, westbound Southern California Regional Rail Authority Metrolink train 111, consisting of one locomotive and three passenger cars, collided head-on with eastbound Union Pacific Railroad (UP) freight train LOF65-12 near Chatsworth, California. The Metrolink train derailed its locomotive and lead passenger car; the UP train derailed its 2 locomotives and 10 of its 17 cars. The force of the collision caused the locomotive of train 111 to telescope into the lead passenger coach by about 52 feet. The accident resulted in 25 fatalities, including the engineer of train 111. Emergency response agencies reported transporting 102 injured passengers to local hospitals. Damages were estimated to be in excess of \$12 million.

Railroad Accident Report National Transportation Safety Board,2014-02-19 On January 6, 1996, Washington Metropolitan Area Transit Authority (WMATA) Metrorail subway train No. T-111 failed to come to a stop at the above-ground Shady Grove, Maryland, passenger station, the final station on the Metrorail Red Line. The four-car train ran by the station platform and continued about 470 feet into the Metrorail yard north of the station, where it struck a standing, unoccupied subway train that was awaiting assignment. The operator of train T-111 was fatally injured; the train's two passengers were not injured. Total property damages were estimated to be between \$2.1 and \$2.6 million.

Aircraft Accident Report United States. National Transportation Safety Board,2000 On August 6, 1997, about 0142:26 Guam local time, Korean Air flight 801, a Boeing 747-3B5B (747-300), Korean registration 11L7468, operated by Korean Air Company, Ltd., crashed at Nimitz Hill, Guam. Flight 801 departed from Kimpo International Airport, Seoul, Korea, with 2 pilots, 1 flight engineer, 14 flight attendants, and 237 passengers on board. The airplane had been cleared to land on runway 6 Left at A.B. Won Guam International Airport, Agana, Guam, and crashed into high terrain about 3 miles southwest of the airport. Of the 254 persons on board, 228 were killed, and 23 passengers and 3 flight attendants survived the accident with serious injuries. The airplane was destroyed by impact forces and a postcrash fire. Flight 801 was operating in U.S. airspace as a regularly scheduled international passenger service flight under the Convention on International Civil Aviation and the provisions of 14 Code of Federal Regulations Part 129 and was on an instrument flight rules flight plan. The National Transportation Safety Board determines that the probable cause of the Korean Air flight 801 accident was the captain's failure to adequately brief and execute the nonprecision approach and the first officer's and flight engineer's failure to effectively monitor and cross-check the captain's execution of the approach. Contributing to these failures were the captain's fatigue and Korean Air's inadequate flight crew training. Contributing to the accident was the Federal Aviation Administration's (FAA) intentional inhibition of the minimum safe altitude warning system (MSAW) at Guam and the agency's failure to adequately manage the system. The safety issues in this report focus on flight crew performance, approach procedures, and pilot training; air traffic control,

including controller performance and the intentional inhibition of the MSAW system at Guam; emergency response; the adequacy of Korean Civil Aviation Bureau (KCAB) and FAA over.

web yeast is a slightly unusual organism it is a facultative anaerobe this means that in oxygen free environments they can still survive the yeast simply switches from aerobic respiration requiring oxygen to anaerobic respiration not requiring oxygen

and converts its food without oxygen in a process known as fermentation
