Financial Reporting in the UK B.A. Rutherford,2007-05-07

Written by a well-known author, this book makes a major contribution to the history of financial reporting, exploring the current and international aspects of standard setting. Compiled through consultation of a considerable amount of relevant literature and interviews with a large number of key players of the ASC, it analyzes the big 'set battles' between standard setters and preparers of financial statements, over topics such as price change accounting, goodwill, and leasing and foreign currency translation, the stand-offs which delayed development in specific areas and the smaller skirmishes which impeded the work of improving financial reporting. It covers a range of topics, including: the formulation of standards on specific topics the evolution of the institutional machinery of standard-setting the politics of standard-setting the theory of accounting standardization the emergence of a conceptual framework for financial reporting. A fine account of the period following the 1960s, charting the history of the Accounting Standards Committee, this book is an essential resource for business and finance students.

Computer Models for Accountants John Flower,1973

Accounting Disrupted Al Bhimani,2021-02-04 Accounting Disrupted: How Digitalization is changing Finance delivers a powerful analysis of the new technological forces buffeting the accounting profession and identifies key pathways to responding to the challenges. Al Bhimani, distinguished accountant, academic, and author, shows readers how established business fundamentals are being eclipsed and that accounting has not been spared. You'll learn: How the new realities of digitalization, including big data and AI, are affecting audit work and financial management practices How learning fast about and from more diverse data sources is essential to the new accounting environment Why accounting information must start to speak to what will take place rather than about financial activities that have occurred What finance must do in a world of changing risks, data growth, fast digitization, and increased regulation The author makes a compelling case that accounting now faces a crunch: it needs to reshape itself from the core because conventional financial analysis is proving too cumbersome and

slow for executives in digitalized organizations. In a straightforward and illustrated style packed with case studies and practical examples, he shows readers how big data, blockchain, robotic process automation, and artificial intelligence, can help accountants adapt to new realities. Perfect for finance leaders in both the private and public sectors, Accounting Disrupted also belongs on the bookshelves of accounting students who wish to better prepare for the technological and professional environment in which they'll shortly find themselves.
