Industrial Microbiology and Biotechnology Pradeep Verma,2022-03-07 Industrial microbiology utilizes microorganisms to produce industrially important products in a more sustainable way, as opposed to the traditional chemical and energy intensive processes. The present book is an attempt to provide its readers with compiled and updated information in the area of Industrial Microbiology and Biotechnology. This book provides the basics of microbiology and how it has been exploited at an industrial scale. The book focuses on the role of biotechnological advances that directly impact the industrial production of several bioactive compounds using microbes-based methods under a controlled and regulated environment. On one hand, this book presents detailed information on the basics of microbiology such as types of microbes and their applications, bioreactor design, fermentation techniques, strain improvement strategies, etc. At the same time it

also provides recent and updated information on industrial production, recovery, and applications of enzymes, alcohols, organic acids, steroids as a drug precursor, etc., using microbial biotechnological approaches. The book presents an overview of modern technological advances for the generation of energy (biomethane, bioethanol, and bioelectricity) and resource recovery from waste. It also highlights the application of CRISPR-based technologies in the industrial microbiology sector. This book is developed with the motive to benefit students, academicians, as well as researchers. The book will also find interests among microbiologists, biotechnologists, environmentalists, and engineers working in the application of the microbes-based approach for the development of greener technologies.

Keratin-based Biomaterials and Bioproducts Narendra Reddy, 2017-09-01 Demand for products made from renewable, sustainable and eco-friendly raw materials is increasing, and will further increase substantially in the future. Awareness of the adverse impacts of synthetic products on the environment, increasingly stringent governmental regulations on the use and disposable of non-biodegradable products, and affordability of consumers are some of the drivers for 'bioproducts'. One of the most economical and practical approaches to develop bioproducts is to use abundant low-cost agricultural byproducts and coproducts. Residues left after harvesting food crops, byproducts generated during production of biofuels, and conversion of animals and plants into food are some of the readily available raw materials suitable for development of bioproducts. Keratins are unique biopolymers that have distinct structure, properties and applications. Keratins are the major

constituents in hairs, feathers, claws, hooves and other parts in humans and animals. Unlike many body parts, keratins are dispensable and are removed periodically. Examples include hairs and nails. Although keratins have unique functionality and structure, there are limited industrial uses of keratin. Keratin is being used commercially in cosmetics and some medicines. However, substantial amounts of keratinaceous materials are being disposed as waste in landfills. This book presents the structure and properties of keratin and their possible applications. Information in this book will be useful to researchers in academia and industry working on bioproducts and also on tissue engineering and drug delivery. Brief information on the products developed has also been included. Researchers, students, agriculturists, and farmers will be able to understand the potential of developing various keratin-based bioproducts.
