Transfiction and Bordering Approaches to Theorizing Translation D. M. Spitzer, Paulo Oliveira, 2022-08-23 This collection seeks to expand the centers from which scholars theorize translation, building on themes in Rosemary Arrojo's pioneering work on transfiction and the influence of bordering disciplines in investigating and elucidating questions central to the field of translation studies. Chapters by scholars around the world theorize translation from diverse perspectives, drawing on a wide range of literatures, genres, and media, including fiction, philosophy, drama, and film. Half the chapters explore the influence of Rosemary Arrojo's work on transfiction and the ways in which fictional representations of translators and translation can shed new light on theoretical concerns. The other chapters look to fields outside translation studies, such as linguistics, media studies, and philosophy, to demonstrate the ways in which the key thinkers and theories that have influenced Arrojo's work can be seen in other disciplines and in turn, encourage further cross-disciplinary research interrogating key questions in the field. The collection makes the case for a multi-layered approach to theorizing translation, one which accounts for the rich possibilities in revisiting existing work and thinking outside disciplinary boundaries in order to advance the field. This book will be of interest to students and scholars in translation studies and comparative literature.

Fisheries and Aquaculture Gustavo Lovrich, Martin Thiel, 2020 Much of the biological and other research efforts on crustaceans have been driven by their importance to humans as a food source. Production comes from a diverse array of methods and scales of extraction, from small recreational or subsistence fisheries to industrial scale operations. Most crustacean catch comes from shrimp fisheries with over two million tonnes taken in 2014, mainly by trawl. The genera *Acetes*, *Fenneropenaeus*, and *Pandalus* account for around three quarters of this catch. Crab, krill and lobster are the other main crustacean products (around 600,000 t crab, 380,000 t krill and 300,000 t lobster in 2014). Trends in crustacean fisheries are broadly similar to those of other seafood although crustaceans often target different market segments and receive higher prices than fish. Crustacean fisheries management faces many challenges with management of bycatch from trawl gears especially significant. Fortunately, crustaceans tend to be easily handled with low discard mortality and this has enabled widespread use of regulations based on size, maturity or sex (e.g., male-only fisheries). Total allowable catch (TAC) limits are widely used and highly effective for ensuring sustainable harvests when set responsibly using good information. TAC systems are often combined with catch share or individual transferable quota systems which had a mixed history in crustaceans, sometimes reducing overall community benefit. This parallels the challenge facing fisheries globally of ensuring that harvests are not only sustainable but also deliver benefits to the wider community beyond the commercial fishers; management of some crustacean fisheries are at the forefront of these developments--

Nervous Systems and Control of Behavior Charles Derby, Martin Thiel, 2014-09-24 Crustacean Nervous Systems and their Control of Behavior is the third volume of the series The Natural History of the Crustacea. This volume is on the functional organization of crustacean nervous systems, and how those nervous systems produce behavior. It complements other volumes on related topics of feeding biology, reproductive biology, endocrine systems, and behavioral ecology. There is a rich history of the study of the neurobiology of crustaceans, going back over 150 years. This has included studies on how their nervous systems allow them to perform behaviors that are adapted to their particular environments, as well as studying them as model organisms to understand basic

biomedical principles about neural function, such as sensory transduction and processing, synaptic transmission and integration, neuromodulation, and learning and memory. The volume has three sections that build progressively on each other. The first section is on the basic organizational features of the crustacean nervous system and the principles upon which it is built. The second section is on sensory ecology - the organization of each sensory system and how it is used in intra- and interspecific interactions, within an ecological context. The third section uses case studies of how crustacean nervous systems are organized to perform complex behaviors and interactions, such as walking, escape, social interactions, and memory and learning. Taken together, the 20 chapters synthesize our modern understanding of the neural control of behavior in crustaceans, based on the most recent technologies in physiological recording, molecular biology, and computational science. This volume will be useful to students and researchers as a concise summary of current knowledge of crustacean neuroscience.

Shaping Regional Futures Valeria Lingua, Verena Balz, 2019-10-22 This book discusses the role of regional design and visioning in the formation of regional territorial governance to offer a better understanding of (1) how a recognition of spatial dynamics and the visualization of spatial futures informs, and is informed by, planning frameworks and (2) how such design processes inform co-operation and collaboration on planning in metropolitan regions. It gathers theoretical reflections on these topics, and illustrates them by means of practical experiences in several European countries. Innovatively associating ideas with knowledge, it appeals to anyone with an interest in planning experiments in a post-regulative era. It aims at an increased understanding of how practices, engaged with the imagination of possible futures, support the creation of institutional capacity for strategic spatial planning at regional scales.

Learning from Picturebooks Bettina Kümmerling-Meibauer, Jörg Meibauer, Kerstin Nachtigäller, Katharina J. Rohlfing, 2015-02-20 Picturebooks, understood as a series of meaningful text-picture relations, are increasingly acknowledged as an autonomous sub-genre of children's literature. Being highly complex aesthetic products, their use is deeply embedded in specific situations of joint attention between a caregiver and a child. This volume focuses on the question of what children may learn from looking at picturebooks, whether printed in a book format, created in a digital format, or self-produced by educationalists and researchers. Interest in the relationship

between cognitive processes and children's literature is growing rapidly, and in this book, theoretical frameworks such as cognitive linguistics, cognitive narratology, cognitive poetics, and cognitive psychology, have been applied to the analysis of children's literature. Chapters gather empirical research from the fields of literary studies, linguistics and cognitive psychology together for the first time to build a cohesive understanding of how picturebooks assist learning and development. International contributions explore: language acquisition the child's cognitive development emotional development literary acquisition (literary literacy) visual literacy. Divided into three parts considering symbol-based learning, co-constructed learning, and learning language skills, this cross-disciplinary volume will appeal to researchers, students and professionals engaged in children's literature and literacy studies, as well as those from the fields of cognitive and developmental psychology, linguistics, and education.
