Build Your Own Acoustic Guitar Jonathan Kinkead,2004 (Book). Every guitarist dreams of owning a handmade instrument, but for most, the cost is likely to be prohibitive. The alternative building your own fine guitar is not as difficult as you might imagine, given some skill, patience, and the expert guidance of a master luthier. Every step of construction is fully covered, from choice, selection, and preparation of woods, to consideration of size, bracing, and tonal qualities. Each step of the building sequence is clearly photographed in color, with variations to the standard design shown to enable you to personalize your instrument as you make it. Briston, England-based Jonathan Kinkead has been building guitars for nearly 30 years. His craft is born out of experience and intuition rather than a strict following of technical detail. The resulting beauty of form and distinctive tone have earned him his reputation as one of the world's most respected independent luthiers.

Essential Speech and Language Technology for Dutch Peter Spyns,Jan Odijk,2013-02-26

The book provides an overview of more than a decade of joint R&D efforts in the Low Countries on HLT for Dutch. It not only presents the state of the art of HLT for Dutch in the areas covered, but, even more importantly, a description of the resources (data and tools) for Dutch that have been created are now available for both academia and industry worldwide. The contributions cover many areas of human language technology (for Dutch): corpus collection (including IPR issues) and building (in particular one corpus aiming at a collection of 500M word tokens), lexicology, anaphora resolution, a semantic network, parsing technology, speech recognition, machine translation, text (summaries) generation, web mining, information extraction, and text to speech to name the most important ones. The book also shows how a medium-sized language community (spanning two territories) can create a digital language infrastructure (resources, tools, etc.) as a basis for subsequent R&D. At the same time, it bundles contributions of almost all the HLT research groups in Flanders and the Netherlands, hence offers a view of their recent research activities. Targeted readers are mainly researchers in human language technology, in particular those focusing on Dutch. It concerns researchers active in larger networks such as the CLARIN, META-NET, FLReNet and participating in conferences such as ACL, EACL, NAACL, COLING, RANLP, CICling, LREC, CLIN and DIR (both in the Low Countries), InterSpeech, ASRU, ICASSP, ISCA, EUSIPCO, CLEF, TREC, etc. In addition, some chapters are interesting for human language technology policy makers and even for science policy makers in general.

Recording Sound Mark Brocklesby,2024-04-08 This book is for beginners, hobbyists and semi-professionals wanting to enhance and improve their knowledge of recording sound. Focusing on using microphones to capture a few instruments, both the theory and the practical considerations are explained in a concise and digestible manner. Many artists can craft standout productions by working solely 'in the box' with their DAW of choice, or with hardware such as synths and processing tools that do not require a microphone. However, musicians and artists may want to start working towards capturing a variety of sounds, instruments and environments, as this can enhance the listening soundstage and feel of a production. This book succinctly presents aspects of the recording process. It explores different ways to get started on your journey as a recording engineer or artist, be it hiring a

studio, setting up a recording space or recording on location. 'This book is an essential read for any budding producer, engineer or artist who is serious about a life in music.' – Brendan Lynch
