Present Beyond Measure Lea Pica, 2023-08-22 Are you suffering from Data Presentation Zombification?

Billions of dollars and thousands of hours are lost every year during ineffective business meetings worldwide. Data practitioners painstakingly present their valuable analytical insights, only to fall flat, inspiring more yawns than yeses. In *Present Beyond Measure: Design, Visualize, and Deliver Data Stories That Inspire Action*, Lea Pica provides a 4-phase, step-by-step blueprint for planning, designing, visualizing, and delivering compelling data storytelling in business presentations. Following her blueprint, you will learn how to use neuroscience and cinematic storytelling techniques to galvanize your stakeholders into action. By the final page, you'll know exactly how to: Choose the data that matters most to your decision-makers Speak to different stakeholder audience personality types (even the most challenging) Infuse your data presentation with a persuasive narrative storyline Craft strategic recommendations that get approved and implemented Design simple, stunning slides that communicate without confusing Transmit your data story with best-practice data visualization techniques Avoid the most common data visualization violations and charting pitfalls Prepare for and deliver your presentation like a professional speaker Navigate challenging meeting conversations and logistics with ease Whether you work with little or big data, this book will show you how to prevent presentation zombies and inspire the action and credibility you and your organization deserve.

Rock Mechanics and Engineering Helin Fu, Wei Chen, Jiajun Fu, 2020-11-25 *Rock Mechanics and Engineering: Prediction and Control of Landslides and Geological Disasters* presents the state-of-the-art in monitoring and forecasting geotechnical hazards during the survey and design, construction, and operation of a railway. This volume offers the latest research and practical knowledge on the regularity of disaster-causing activities, and the monitoring and forecasting of rockfalls, landslides, and debris flow induced by rainfall and human activity. The book gives guidance on how to optimize railway design, prevent and control measures during construction, and geological hazard remediation. The book also advises engineers on how to achieve traffic safety on high-speed railways. Eleven chapters present best practices in the prediction and control of landslides and rockfalls in geological disasters, derived from years of geotechnical engineering research and practice on high-speed railways in China. High-speed railways bring characteristic geotechnical challenges including a complete maintenance system, a long railway line, and the subjection of the geological body to cyclic loads. Since the damage to the geological body is influenced by fatigue as well as rock and soil strength and hydrology, the study of geotechnical hazards to high-speed

rail is very complex. Monitoring and predicting such hazards on high-speed railways is a significant challenge to their safe construction and operation. Presents the latest technical achievement and development trends in landslide and rockfall forecasting Considers the challenges of high-speed railways to the prediction and control of geotechnical hazards Gives both in-situ and laboratory tests for rockfalls, and considers the collapse process of rock slopes Describes the principles of slope monitoring with specific reference to high-speed rail Details an automatic monitoring system for geotechnical hazards to high-speed rail
