**The Language Teaching Matrix** Jack C. Richards, 1990-02-23 For use in courses on language teaching methodology and teacher preparation, this book also serves as an invaluable source for courses in language curriculum development, materials development, and teaching practice. The author views effective language teaching as a network of interactions involving the curriculum, methodology, the teacher, the learner, and instructional materials (hence the metaphor of a matrix). Each chapter discusses and examines the theoretical and practical dimensions of a central issue in language teaching. Among the topics covered are curriculum development, designing instructional materials, teaching listening, speaking, reading and writing, the nature of effective teaching, self-monitoring in teacher development, and language and content. Richards presents key issues in an accessible and highly readable style, and shows how teachers and teachers-in-training can be involved in the investigation of classroom teaching and learning. The emphasis is not on prescriptions but rather on developing effective teaching through understanding the various factors that interact in second language learning and in the second language classroom.

*Environmental Consequences and Management of Coastal Industries* Michael Elliott, Andrew Wither, 2023-11-11 *Environmental Consequences and Management of Coastal Industries: Terms and Concepts* covers the engineering, natural and social sciences aspects related to coastal power plants and their operation and management. The book gives background to featured problems and solutions, making it relevant to power plants in all global situations and giving

practitioners what they need to assess environmental consequences. In addition, the book indicates, defines and illustrates the terms and concepts used worldwide. This is important as engineers and scientists often have an imperfect understanding of the requirements of each other, and similar (in some cases identical) terms may have very different meanings. Users will find this to be a simple and accessible guide to the terminology used and concepts covered. Individual entries are complete in themselves, but still cross referenced to other entries where additional information may be found. This provides quick-and-easy access to the required information. Provides a unique approach that acts as a first-stop-shop for complementary interests with entries presented on separate pages Presents multidisciplinary content, thus ensuring that different functions understand others' priorities and concerns Includes comprehensive content with wide ranging coverage written by experts with many decades of experience in environmental aspects of coastal power plans and other industries
