Birdwatching in New York City and on Long Island

Deborah Rivel, Kellye Rosenheim, 2016-05-03 This easy-to-use guide gives seasonal information for both popular birding sites and those off the beaten path. Precise directions to the best viewing locations within the region's diverse habitats enable birdwatchers to efficiently explore urban and wild birding hotspots. Over 500 species of birds can be seen in New York City's five boroughs and on Long Island, one of the most densely populated and urbanized regions in North America, which also happens to be situated directly on the Atlantic Flyway. In this fragmented environment of scarce resources, birds concentrate on what's available. This means that high numbers of birds are found in small spaces. In fact, Central Park alone attracts over 225 species of birds, which birders from around the world flock to see during spring and fall migration. Beyond Central Park, the five boroughs and Long Island have numerous wildlife refuges of extraordinary scenic beauty where resident and migratory birds inhabit forests, wetlands, grasslands, and beaches. These special places present an opportunity to see a wide array of songbirds, endangered nesting shorebirds, raptors, and an unprecedented number and variety of waterfowl. Including the latest information on the seasonal status and distribution of more than 400 species, with 39 maps and over 50 photographs, this full-color guide features information essential to planning a birding visit. It will

become the go-to book for both the region's longtime birders and those exploring the area for the first time.

Short Message Service (SMS) Friedhelm Hillebrand, 2010-01-21 Contributions from Finn Trosby, Kevin Holley, Ian Harris Written to celebrate the 25th anniversary of SMS standardization by the people who produced the standards, Short Message Service (SMS): The Creation of Personal Text Messaging, describes the development of the SMS standard and its ongoing evolution. The standardization of SMS started in February 1985 as a part of the creation of the second generation digital cellular system GSM, and the 25th anniversary of the first work on SMS provides an opportunity to review and understand how this service was developed. The book also

looks to the future, as a large number of new GSM and evolved GSM phones will support SMS as a mass market high availability messaging service, a new simple Multimedia Messaging Service (MMS) suitable for use by everyone and for implementation in every new terminal is proposed. One of the only books which covers the complete SMS genesis from concept ideas to standardization of a first technical solution and its evolution to the present day. Describes the service concept including the limitation of the message length to 160 characters and explains the rationale behind the concept. Based on existing and newly retrieved documentation. Concludes that SMS has a long future since most future GSM phones will support SMS as the only messaging service, and so an SMS evolution is put forward.

What's missing from this hearing care model is the big picture—a real-life illustration of how hearing loss, its emotions, and its barriers affect every corner of your life. Now, hearing-health advocates, consultants, and speakers Shari Eberts and Gael Hannan offer a new skills-based approach to hearing loss that is centered not on hearing better, but on communicating better. With honesty and humor, they share their own hearing loss journeys, and outline invaluable insights, strategies, and workarounds to help you engage with the world and be heard. You'll gain tips for navigating all areas impacted by hearing loss, including relationships, work, technology; strategies for adopting a new, empowering mindset towards your hearing loss; and communication behaviors that can make almost any listening situation manageable. The Global Smartphone Daniel Miller ,Laila Abed Rabho ,Patrick Awondo , Maya de Vries,Marília Duque,Pauline Garvey, Laura Haapio-Kirk,Charlotte Hawkins,Alfonso Otaegui ,Shireen Walton,Xinyuan Wang,2021-05-06 The smartphone is often literally right in front of our nose, so you would think we

would know what it is. But do we? To find out, 11 anthropologists each spent 16 months living in communities in Africa, Asia, Europe and South America, focusing on the take up of smartphones by older people. Their research reveals that smartphones are technology for everyone, not just for the young. The Global Smartphone presents a series of original perspectives deriving from this global and comparative research project.

Smartphones have become as much a place within which we live as a device we use to provide 'perpetual opportunism', as they are always with us. The authors show how the smartphone is more than an 'app device' and explore differences between what people say about smartphones and how they use them. The smartphone is unprecedented in the degree to which we can transform it. As a result, it quickly assimilates personal values. In order to comprehend it, we must take into consideration a range of national and cultural nuances, such as visual communication in China and Japan, mobile money in Cameroon and Uganda, and access to health information in Chile and Ireland – all alongside diverse trajectories of ageing in Al Quds, Brazil and Italy. Only then can we know what a smartphone is and understand its consequences for people's lives around the world.
