Ontology Engineering in a Networked World Mari Carmen Suárez-Figueroa,Asunción Gómez-Pérez,Enrico Motta,Aldo Gangemi,2012-03-26 The Semantic Web is characterized by the existence of a very large number of distributed semantic resources, which together define a network of ontologies. These ontologies in turn are interlinked through a variety of different meta-relationships such as versioning, inclusion, and many more. This scenario is radically different from the relatively narrow contexts in which ontologies have been traditionally developed and applied, and thus calls for new methods and tools to effectively support the development of novel network-oriented semantic applications. This book by Suárez-Figueroa et al. provides the necessary methodological and technological support for the development and use of ontology networks, which ontology developers need in this distributed environment. After an introduction, in its second part the authors describe the NeOn Methodology framework. The book's third part details the key activities relevant to the ontology engineering life cycle. For each activity, a general introduction, methodological guidelines, and practical examples are provided. The fourth part then presents a detailed overview of the NeOn Toolkit and its plug-ins. Lastly, case studies from the pharmaceutical and the fishery domain round out the work. The book primarily addresses two main audiences: students (and their lecturers) who need a textbook for advanced undergraduate or graduate courses on ontology engineering, and practitioners who need to develop ontologies in particular or Semantic Web-based applications in general. Its educational value is maximized by its structured approach to explaining guidelines and combining them with case studies and numerous examples. The description of the open source NeOn Toolkit provides an additional asset, as it allows readers to easily evaluate and apply the ideas presented.

The Story of A Patricia Crain,2000 Richly illustrated with often antic images from alphabet books and primers, The Story of A relates the history of the alphabet as a genre of text for children and of alphabetization as a social practice in America, from early modern reading primers to the literature of the American Renaissance. Offering a poetics of alphabetization and explicating the alphabet's tropes and rhetorical strategies, the author demonstrates the far-reaching cultural power of such apparently neutral statements as A is for apple. The new market for children's books in the eighteenth century established for the republic of ABC a cultural potency equivalent to its high-culture counterpart, the republic of letters, while shaping its child-readers into consumers. As a central rite of socialization, alphabetization schooled children to conflicting expectations, as well as to changing models of authority, understandings of the world, and uses of literature. In the nineteenth century, literacy became a crucial aspect of American middle-class personality and subjectivity. Furnishing the readers and writers needed for a national literature, the alphabetization of America between 1800 and 1850 informed the sentimental-reform novel as well as the self-consciously aesthetic novel of the 1850s. Through readings of conduct manuals, reading primers, and a sentimental bestseller, the author shows how the alphabet became embedded in a maternal narrative, which organized the world through domestic affections. Nathaniel Hawthorne, by contrast, insisted on the artificiality of the alphabet and its practices in his antimimetic, hermetic The Scarlet Letter, with its insistent focus on the letter A. By understanding this novel as part of the network of alphabetization, The Story of A accounts for its uniquely persistent cultural role. The author concludes, in an epilogue, with a reading of postmodern alphabets and their implications for the future of literacy.

Algorithmic Puzzles Anany Levitin,Maria Levitin,2011-10-14 Algorithmic puzzles are puzzles involving well-defined procedures for solving problems. This book will provide an enjoyable and accessible introduction to algorithmic puzzles that will develop the reader's algorithmic thinking. The first part of this book is a tutorial on algorithm design strategies and analysis techniques. Algorithm design strategies — exhaustive search, backtracking, divide-and-conquer and a few others — are general approaches to designing step-by-step instructions for solving problems. Analysis techniques are methods for investigating such procedures to answer questions about the ultimate result of the procedure or how many steps are executed before the procedure stops. The discussion is an elementary level, with puzzle examples, and requires neither programming nor mathematics beyond a secondary school level. Thus, the tutorial provides a gentle and entertaining introduction to main ideas in high-level algorithmic problem solving. The second and main part of the book contains 150 puzzles, from centuries-old classics to newcomers often asked during job interviews at computing, engineering, and financial companies. The puzzles are divided into three groups by their difficulty levels. The first fifty puzzles in the Easier Puzzles section require only middle school mathematics. The sixty puzzle of average difficulty and forty harder puzzles require just high school mathematics plus a few topics such as binary numbers and simple recurrences, which are reviewed in the tutorial. All the puzzles are provided with hints, detailed solutions, and brief comments. The comments deal with the puzzle origins and design or analysis techniques used in the solution. The book should be of interest to puzzle lovers, students and teachers of algorithm courses, and persons expecting to be given puzzles during job interviews.

Macroeconomics Andrew B. Abel,Ben Bernanke,Dean Croushore,2013-03-08 Abel, Bernanke, and Croushore present macroeconomic theory in a way that prepares students to analyze real macroeconomic data used by policy makers and researchers. With a balanced treatment of both classical and Keynesian economics, the comprehensive coverage makes it easy for instructors to align chapters to fit their own syllabi. Students in this course often struggle to see how the macroeconomic models compare to one another, and fit into the big picture. This text uses a unified approach based on a single economics model that provides students with a clear understanding of macroeconomics and its classical and Keynesian assumptions. The main objective of the eighth edition is to keep the book fresh and up-to-date, especially in light of the recent crises in the United States and Europe and many new tools used by the Federal Reserve in response to the crisis. To reflect recent events and developments in the field, revisions have been made throughout the text, and additional new applications, boxes, and problems are included.

Man in Adaptation William Petersen,Yehudi A. Cohen,2022-04-13 Underlying the anthropological study of man is the principle that there is a reality to which man must adapt if he is to survive. Reproduce, and to perpetuate himself. Populations must adapt to the realities of the physical world and maintain a proper fit between their biological makeup and the pressures of the various niches of the world in which they seek to live. Social groups-where culture is found-must develop adaptive mechanisms in the organization of their social relations if there is to be order, regularity, and predictability in patterns of cooperation and competition and if they are to survive as viable units. This three-volume set of readings presents an introduction to anthropology that is unified and made systematic by focus on adaptations that have accompanied the evolution of man, from non-human primate to inhabitant of vast urban areas in modern industrial societies. Man in Adaptation: The Cultural Present introduces Cultural Anthropoloty also from the point of view of adaptation and provides coherence for the study of human societies from man's social beginnings to the present. The book deals sequentially with the more and more complex technologies and political and social structures that have enabled different societies to make effective use of the energy potentials in their habitats. This and the two companion volumes are the first attempt to unify the disparate subject matter of anthropology within a single and powerful explanatory framework. They incorporate the work of the most renowned anthropological experts on man, and they illuminate clearly one of the most important concepts around which one can build an investigation of the nature and scope of anthropology itself. For these reasons, they are recognized as indispensable reading for every professional anthropologist and as perhaps the best available means of introducing new students to the field.

Taking European Knowledge Society Seriously Ulrike Felt,Brian Wynne,2007-07-30 This report is the product of an expert working group acting under mandate from the European Commission Directorate General for Research (DG RTD), including contributions from specialists in science and technology studies, policy analysis, sociology, philosophy and law, as well as participants from civil society organizations. The report looks at the causes and implications of widely-recognised European public unease with science and science-based technologies. It asks how we might at the same time further EU commitments to enhance democratic civil society in Europe, as well as address urgent challenges for science and technology policy, for science and governance, including those of climate and sustainability. Individual chapters deal with innovation policy, the regulation of risk institutionalised approaches to ethics, and modes of learning in complex environments, as well as efforts to engage European publics in the governance of science. A final conceptual chapter draws these themes together by analysing the role of overarching 'imaginaries' in shaping practices and perspectives in all these areas. In conclusion, the report advances a number of salient messages for policy makers and sixteen specific recommendations for policy improvement. In sum, the authors call for new forms of experiment in both governance and science, moving beyond conventional linear understandings and engaging afresh with the rich diversity of European public life. Only in this way, the authors argue, will European policy take 'knowledge society' seriously -and fulfil its abundant promise. -- Editor.
