

Adm Aeronautical Decision Making

Christian G. Meyer

Workshop on Aeronautical Decision Making (ADM). ,1992

Aeronautical Decision-making (ADM) Training ,2006 Flying a high-technology fighter with high stakes and under high g-force is not only an issue of skilled psychomotor performance but also of real-time decision-making involving situation awareness, choice amongst alternatives, time pressure and risk assessment. There is no aeronautical decision-making (ADM) training program for military pilots in existence neither in the R.O.C. Air Force nor around the world, although academic research had recognized the training needs for aeronautical decision-making. This research consists of three studies described in six chapters to develop an effective solution for ADM problems in order to improve military pilots decision-making in a dynamic and time-limited tactical environment. The first chapter is an executive summary comprised by three studies. The second chapter identified ADM training needs by applying the Human Factors Analysis and Classification System (HFACS). Without good analysis it is impossible to identify precisely the training needs and the nature of the training content required for improving pilots performance. The third chapter examined five ADM training mnemonics in six different decision-making scenarios for developing an ADM training program. There are many ADM mnemonics available. However, there was lack of empirical research investigating the efficiency of those ADM mnemonics in the real-time tactical environment. The fourth chapter evaluates the effectiveness of ADM training program by simulator trials and pencil and paper trials. The fifth chapter is overall discussion, followed by the final chapter containing conclusions and recommendations. This research demonstrated that ADM training program did improve pilots in-flight decision-making performance. Improvements in pilots situation assessment and risk management were obtained, but these were traded-off for response time. To improve the quality of pilots decision-making, the ADM training program needs to be coordinated with real-time simulator scenarios training. The findings have demonstrated that the ADM training program significantly improved pilots situation assessment and risk management. However, it still needs to be established if these performance gains continue to be evident at a later date during actual operations.

Decision Making in Aviation Don Harris, 2017-07-05 Decision making pervades every aspect of life: people make hundreds of decisions every day. The vast majority of these are trivial and without a right or wrong answer. In some respects there is also nothing extraordinary about pilot decision making. It is only the setting that is different - the underlying cognitive processes are just the same. However, it is the context and the consequences of a poor decision which serve to differentiate aeronautical decision making. Decisions on the flight deck are often made with incomplete information and while under time pressure. The implications for inadequate performance is much more serious than in many other professions. Poor decisions are implicated in over half of all aviation accidents. This volume contains key papers published over the last 25 years providing an overview of the major paradigms by which aeronautical decision making has been investigated. Furthermore, decision making does not occur in isolation. It is a joint function of the flight tasks; knowledge; equipment on the flight deck and other stressors. In this volume of collected papers, works from leading authors in the field consider all these aspects of aeronautical decision making.

How Expert Pilots Think Cognitive Processes in Expert Decision Making ,1993 This report is the second in the investigation of the role of expert cognitive processes in Aeronautical Decision Making (ADM). The first report defined the differences between expert and novice decision makers and correlated the development of expert pilot cognitive processes with training and experience. This volume continues the research into the understanding of how pilots think by examining human information processing and expert problem solving characteristics. From this analysis: the mental attributes critical to developing expert decision making are explained, and three basic limits on decision making are identified. These are attention span, short term memory and long term memory. Next, the analysis examines the development of Expert Decision Making (EDM) from the comparison of how novices and experts perceive, store, organize and use their knowledge. This analysis shows that high levels of competence result from the interaction between knowledge organization and processing abilities. Experts are found to possess the abilities of rapid access to, and efficient utilization of a highly organized body of conceptual and procedural knowledge. That is, an elaborately structured set of associated concepts, procedures and events based upon many years of study, training and experience in aviation. The use of this knowledge base is described in terms of the characteristics of EDM related to perception, attention, memory, creativity and superior situational awareness. Since the speed and accuracy of expert cognitive processes make them take on the characteristics of insight or intuition, the role of intuition in decision making is the next analytical part of the investigation.

Risk Management Handbook Federal Aviation Administration, 2012-07-03 Every day in the United States, over two million men, women, and children step onto an aircraft and place their lives in the hands of strangers. As anyone who has ever flown knows, modern flight offers unparalleled advantages in travel and freedom, but it also comes with grave responsibility and risk. For the first time in its history, the Federal Aviation Administration has put together a set of easy-to-understand guidelines and principles that will help pilots of any skill level minimize risk and maximize safety while in the air. The Risk Management Handbook offers full-color diagrams and illustrations to help students and pilots visualize the science of flight, while providing straightforward information on decision-making and the risk-management process.

Introduction to Cognitive Processes of Expert Pilots ,1992 This report addresses the historical problem that a very high percentage of accidents have been classified as involving pilot error. Through extensive research since 1977, the Federal Aviation Administration determined that the predominant underlying cause of these types of accidents involved decisional problems or cognitive information processing. To attack these problems, Aeronautical Decision Making (ADM) training materials were developed and tested for ten years. Since the publication of the ADM training manuals in 1987, significant reductions in human performance error (HPE) accidents have been documented both in the U.S. and world wide. However, shortcomings have been observed in the use of these materials for re-currency training and in their relevance to more experienced pilots. The following discussion defines the differences between expert and novice decision makers from a cognitive information processing perspective, correlates the development of expert pilot cognitive processes with training and experience, and reviews accident scenarios which exemplify those processes. This introductory material is a necessary prerequisite to an understanding of how to formulate expert pilot decision making training innovations; and, to continue the record of improved safety through ADM training.

Decision Making in Complex Environments Jan Noyes, Malcolm Cook, Yvonne Masakowski, 2017-09-18 Many complex systems in civil and military operations are highly automated with the intention of supporting human performance in difficult cognitive tasks. The complex systems can involve teams or individuals working on real-time supervisory control, command or information management tasks where a number of constraints must be satisfied. Decision Making in Complex Environments addresses the role of the human, the technology and the processes in complex socio-technical and technological systems. The aim of the book is to apply a multi-disciplinary perspective to the examination of the human factors in complex decision making. It contains more than 30 contributions on key subjects such as military human factors, team decision making issues, situation awareness, and technology support. In addition to the major application area of military human factors there are chapters on business, medical, governmental and aeronautical decision making. The book provides a unique blend of expertise from psychology, human factors, industry, commercial environments, the military, computer science, organizational psychology and training that should be valuable to academics and practitioners alike.

Pilot's Handbook of Aeronautical Knowledge Federal Aviation Administration (FAA),2016-09-25 The Pilot's Handbook of Aeronautical Knowledge provides basic knowledge that is essential for pilots. This handbook introduces pilots to the broad spectrum of knowledge that will be needed as they progress in their pilot training. Except for the Code of Federal Regulations pertinent to civil aviation, most of the knowledge areas applicable to pilot certification are presented. This handbook is useful to beginning pilots, as well as those pursuing more advanced pilot certificates. This handbook includes the following chapters: Chapter 1. Introduction to Flying Chapter 2. Aeronautical Decision-Making Chapter 3. Aircraft Construction Chapter 4. Principles of Flight Chapter 5. Aerodynamics of Flight Chapter 6: Flight Controls Chapter 7. Aircraft Systems Chapter 8. Flight Instruments Chapter 9. Flight Manuals and Other Documents Chapter 10. Weight and Balance Chapter 11. Aircraft Performance Chapter 12. Weather Theory Chapter 13. Aviation Weather Services Chapter 14. Airport Operations Chapter 15. Airspace Chapter 16. Navigation Chapter 17. Aeromedical Factors Appendix A. Performance Data for Cessna Model 172R and Challenger 605 Appendix B. Acronyms, Abbreviations, and NDTAM Contractions Appendix C. Airport Signs and Markings

Pilot's Handbook of Aeronautical Knowledge United States. Federal Aviation Administration,2009-09 Used extensively as a reference source for the FAA Knowledge Exams, this resource includes basic knowledge that is essential for all pilots, from beginning students to those pursuing advanced pilot certificates. This updated guide covers a wide array of fundamental subjects, including principles of flight, aircraft and engine structures, charts and graphs, performance calculations, weather theory, reports, forecasts, and flight manuals. Required reading for pilots for more than 25 years and formerly published as an Advisory Circular (AC 61-23C), this new edition is now listed as an official FAA Handbook.

Aviation Psychology and Human Factors Monica Martinussen,David R. Hunter,2017-07-12 This book covers the application of psychological principles and techniques to situations and problems of aviation. It offers an overview of the role psychology plays in aviation, system design, selection and training of pilots, characteristics of pilots, safety, and passenger behavior. It covers concepts of psychological research and data analysis and shows how these tools are used in the development of new psychological knowledge. The new edition offers material on physiological effects on pilot performance, a new chapter on aviation physiology, more material on fatigue, safety culture, mental health and safety, as well as practical examples and exercises after each chapter.
