Automated Fingerprint Identification Systems (AFIS) Peter Komarinski, 2005-01-20 An easy-to-understand synopsis of identification systems, presenting in simple language the process of fingerprint identification, from the initial capture of a set of finger images, to the production of a Rapsheet. No other single work exists which reviews this important identification process from beginning to end. We examine the identification process for latent (crime scene) prints and how they are identified with these systems. While the primary focus is automated fingerprint identifications, the book also touches on the emergence and use of fingerprints in other biometric systems. Criminal justice administrators, policy makers, and students of forensic science and criminal justice will find a reference to the known limitations and advantages of these systems. This book provides information as to the critical and continual need for properly trained individuals as well as an understanding of the direct and indirect costs associated with maintaining these systems. An understanding of the entire system and what it means will prove invaluable. Why are there missed identifications? Why are identifications made on one database that are not made on another database? Key terms and issues are included, and well as suggestions for improving the overall number of identifications. The book will go beyond process and also discuss issues such as interoperability, management strategies for large databases, contract development, lights out verification and several other issues which impact automated identifications. - The first comprehensive title on this subject area - Outlines in detail the entire process of fingerprint gathering and identity verification - The future of AFIS will is discussed, including national standards in developing multi-agency cooperation/interoperability (U.S.) in addition to the use of AFIS identification world-wide.

*Defining Afis Latent Print Lights-Out* U.S. Department of Commerce, 2014-01-31 The criminal justice communities use the science of fingerprints to perform two major operations. The first is 10-print fingerprint operations with the primary purpose of establishing an individual's fingerprint biometric identity and their respective criminal history record. The second is forensic latent print examinations with the primary purpose of supporting criminal investigations in an effort to solve crimes. Both operations are crucial in supporting subsequent legal proceedings. This paper introduces and explores an incremental approach to automating more of the forensic latent print examination process.

**Automated Fingerprint Identification** Edward P. Jackson, 2015 From its inception over 100 years ago, fingerprint technology has come a long way. This book provides background on and traces the recent history of automated fingerprint identification systems. Included in the book is a brief examination of standards and the role of algorithms. In its history, fingerprints have been used to identify criminal and terrorist suspects, perform background checks, and monitor immigration status, among other applications. Prints found at the scene of a crime, referred to as latent prints, are compared with fingerprint records of known individuals who have been convicted of or arrested for a crime. Law enforcement agencies have been working to automate this comparison process. This book also provides the current landscape of latent Automated Fingerprint Identification System (AFIS) interoperability, meaning the ability to share information between networks, systems, components, etc. The book addresses

essential elements of interoperability, outlines recent advances in the field and provides a high-level strategic plan for Federal agencies to implement the necessary requirements for interoperability to enhance public safety.

*Islam in Contemporary Africa* Afis Ayinde Oladosu, 2021-03-04  
*Islam in Contemporary Africa: On Violence, Terrorism and Development* features essays which are written by scholars, Christians and Muslims, on their experience of Islam and the Muslims in the continent of Africa and how terrorism and violence have impacted intra-African harmony and cross-cultural understanding in the world today. The authors, most of whom reflect the cultural diversity of the continent particularly in its Eastern, Western and Southern-African contexts, have also tried to grapple with the dynamics which attend the current global war on terror, the Islamic and Christian jurisprudential perspectives to same and the politics of terror in and outside the continent. Perhaps most importantly the essays in this book betray, even though in an eclectic manner, a deep interest in the analyses of the phenomenon of terrorism and its over-all effects on Africa. Specifically the book examines the following as they relate to Violence, Terrorism, Africa's Development and global peace: Jurisprudence Anti-Terrorism Theology History Drugs and Narcotics The Media International Diplomacy Colonialism Intellectual Terrorism Gender and African Value System

**Planning and Implementation of Open Source Afis for Indonesia E-Voting** Agastya Alfath, 2012-02 Along with the implementation of electronic KTP (National ID Card that is powered by smart card technology), the Government of Indonesia has also planned to implement electronic voting or E-Voting for National Voting in year 2014. To realize this major plan, thorough planning, design, and implementation of the new system should be done. BPPT (Badan Penerapan dan Pengkajian Teknologi) has been chosen by the government to conduct research about this new E-Voting system. They currently already have a prototype of

E-Voting system, but it lacks a verification module using fingerprint scanner, and is still using costly Microsoft Windows operating system. This book will focus on the planning, design, and implementation of automated fingerprint identification system specifically built for E-Voting which is fully based on open source software.

*New Trends and Developments in Biometrics* Jucheng Yang,Shan Juan Xie,2012-11-28 In recent years, biometrics has developed rapidly with its worldwide applications for daily life. New trends and novel developments have been proposed to acquire and process many different biometric traits. The ignored challenges in the past and potential problems need to be thought together and deeply integrated. The key objective of the book is to keep up with the new technologies on some recent theoretical development as well as new trends of applications in biometrics. The topics covered in this book reflect well both aspects of development. They include the new development in forensic speaker recognition, 3D and thermo face recognition, finger vein recognition, contact-less biometric system, hand geometry recognition, biometric performance evaluation, multi-biometric template protection, and novel subfields in the new challenge fields. The book consists of 13 chapters. It is divided into four sections, namely, theory and method, performance evaluation, security and template protection, and other applications. The book was reviewed by editors Dr. Jucheng Yang and Dr. Shanjuan Xie. We deeply appreciate the efforts of our guest editors: Dr. Norman Poh, Dr. Loris Nanni, Dr. Dongsun Park, Dr. Sook Yoon and Ms. Congcong Xiong, as well as a number of anonymous reviewers.

**The Fingerprint** U. S. Department Justice,2014-08-02 The

idea of The Fingerprint Sourcebook originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.

Strengthening Forensic Science in the United States National Research Council, Division on Engineering and Physical Sciences, Committee on Applied and Theoretical Statistics, Policy and Global Affairs, Committee on Science, Technology, and Law, Committee on Identifying the Needs of the Forensic Sciences Community, 2009-07-29 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application.

Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration.

Strengthening Forensic Science in the United States gives a full

account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

### **Systems product line engineering handbook**

AFIS,2016-01-21 A Product Line is a set of products with common elements and variable features. Including Product Lines in an overall development strategy tailored to the commercial and/or industrial context delivers significant benefits: products that are more suitable, reduction in cost, shorter development timescales, quality improvement, etc. This work, Systems Product Line Engineering, brings together a summary of the state-of-the-art with lessons learnt from industrial experience in implementing Product Lines of various kinds, in terms of marketplace, number of applications, degree of variability, etc. It is resolutely practical, and is intended to complement existing Systems Engineering manuals; indeed, it adopts the same process structures. It includes: • Definitions and examples: Product Line, Product Lines organizations, Product Line Engineering, • Processes, from needs analysis through to disposal, • Systems Engineering methods, particularly Model-Based Product Line Systems Engineering, • Organization: development in silos, development in platforms, • Implementation strategies and management processes. This work is intended for practitioners: engineers, project managers, instructors, researchers, students and developments of systems that fit into this approach. Elected IncoSE Product of the Year 2015.

**Techniques of Crime Scene Investigation, Seventh Edition** Barry A. J. Fisher,David Fisher,2003-09-25 This latest edition of Techniques of Crime Scene Investigation examines

concepts, field-tested techniques and procedures, and technical information concerning crime scene investigation. It has been widely adopted by police academies, community colleges, and universities and is recommended for preparation for certification exams. Written in an easy-to-read style, this comprehensive text offers up-to-date technical expertise that the author has developed over many years in law enforcement. Includes check-off lists, case studies, and 16 pages of full-color illustrated photos. Also included is an appendix on equipment for crime scene investigations.

**Biometric Systems** James L. Wayman, Anil K. Jain, Davide Maltoni, Dario Maio, 2005-12-06 Biometric Systems provides practitioners with an overview of the principles and methods needed to build reliable biometric systems. It covers three main topics: key biometric technologies, design and management issues, and the performance evaluation of biometric systems for personal verification/identification. The four most widely used technologies are focused on - speech, fingerprint, iris and face recognition. Key features include: in-depth coverage of the technical and practical obstacles which are often neglected by application developers and system integrators and which result in shortfalls between expected and actual performance; and protocols and benchmarks which will allow developers to compare performance and track system improvements.

Criminal Justice Benjamin Netanyahu, 1993-04 An assessment of new criminal justice technologies and their impact. Includes: electronic surveillance, computerized data matching, DNA typing, automated fingerprint identification, biometric security systems, electronic monitoring, drug therapy, hormone manipulation, due process and the right to privacy. Illustrated.
