Simpkins,2017-04-17 A comprehensive textbook that overviews common technologies utilized within the homeland security enterprise with an emphasis on contemporary homeland security mission areas and end-user applications. The authors provide an overview of preparedness applications; preventive and protective systems; and mitigation, response, and recovery technologies. Topics such as ethical and privacy concerns associated with implementing technologies and use of the Internet and social media receive special attention. In addition to readers directly involved in the security disciplines, this book will be useful for students in technical fields of study such as geographic information systems (GIS), computer science, or engineering who are seeking information on standards, theories, and foundations underlining homeland security technologies.

**Democracy Promotion and the Challenges of Illiberal Regional Powers** Nelli Babayan,Thomas Risse,2017-10-02 This book examines Western efforts at democracy promotion, reactions by illiberal challengers and regional powers, and political and societal conditions in target states. It is argued that Western powers are not unequivocally committed to the promotion of democracy and human rights, while non-democratic regional powers cannot simply

be described as autocracy supporters. This volume examines in detail the challenges by three illiberal regional powers –?China, Russia?and Saudi Arabia?– to Western (US and?EU) efforts at democracy promotion. The contributions specifically analyze their actions in Ethiopia and Angola in the case of China, Georgia and Ukraine in the case of Russia, and Tunisia in the case of Saudi Arabia. Democratic powers such as the US or the EU usually prefer stability over human rights and democracy. If democratic movements threaten stability in a region, neither the US nor the EU supports them. As to illiberal powers, they are generally not that different from their democratic counterparts. They also prefer stability over turmoil. Neither Russia?nor China?nor Saudi Arabia explicitly promote autocracy. Instead, they seek to suppress democratic movements in their periphery the minute these groups threaten their security interests or are perceived to endanger their regime survival. This was previously published as a special issue of Democratization.

*Appalachian Fiddle Music* Drew Beisswenger,Roy M. Andrade,Scott Prouty,2021-02-18 Appalachian fiddle music, based on the musical traditions of the people who settled in the mountainous regions of the southeastern United States, is widely-known and played throughout North America and parts of Europe because of its complex rhythms, its catchy melodies, and its often-ancient-sounding stylistic qualities. The authors explore the lives and music of 43 of the classic Appalachian fiddlers who were active during the first half of the 20th century. Some of them were recorded commercially in the 1920s, such as Gid Tanner, Fiddlin’ John Carson, and Charlie Bowman. Some were recorded by folklorists from the Library of Congress, such as William Stepp, Emmett Lundy, and Marion Reece. Others were recorded informally by family members and visitors, such as John Salyer, Emma Lee Dickerson, and Manco Sneed. All of them played throughout most of their lives and influenced the growth and stylistic elements of fiddle music in their regions. Each fiddler has been given a chapter with a biography, several tune transcriptions, and tune histories. To show the richness of the music, the authors make a special effort to show the musical elements in detail, but also acknowledge that nothing can take the place of listening. Many of the classic recordings used in this book can be found on the web, allowing you to hear and read the music together.

*Microstructure and Properties of Ductile Iron and Compacted Graphite Iron Castings* Mariusz Holtzer,Marcin Górny,Rafal Dańko,2015-03-27 This book provides an overview of the surface effects at the interface boundary of metal/sand moulds, and their influence on the surface quality, microstructure and mechanical and anticorrosive properties of high-quality cast iron. It explores utilitarian aspects of the production of high-quality cast iron castings, including thin-walled castings of high-quality cast iron alloys, and examines problems related to the determination of moulding sands and reclaim quality, and their influence on castings. Presenting new material, this book takes into account the influence of metal quality, pouring temperature, solidification time, the quality of moulding sand with the reclaim application, as well the binders of moulding sands, on the formation of the degenerated graphite near surface layers. It also employs the latest research methods, such as a wavelength-dispersive spectrometer (WDS) analysis and thermodynamic calculations, which were carried out on the reactions occurring in the study area. Providing a valuable resource to academics and researchers interested in materials science, metal casting and metallurgy, this book is also intended for metal industry professionals.
