A Profile of the Farm Machinery Industry Dawn M. Drake, 2021-04-15 This book examines farm machinery in the context of its history, corporations, outside market forces, regulations, and challenges and opportunities. The farm machinery industry is a complex sector of the global manufacturing economy that encompasses many companies, including those who that produce tractors, combines, planting equipment, tillage equipment, and irrigation systems. While the global industry is dominated by three full-line manufacturers (Deere and Company, Case New Holland, and the Allis-Gleaner Corporation), there are thousands of other companies, including many short-line manufacturers, that also dictate the nature of the industry. In recent years, equipment built by competitors from Asia have become more common in the farmstead landscape, capturing some of the market share U.S. manufacturers once dominated. This book examines farm machinery in the context of its history, corporations, outside market forces, regulations, and challenges and opportunities. The farm machinery industry, while contributing a small percentage to gross world product, is vitally important to another key sector of the economy—agriculture. In advanced economies, where the percentage of the labor force engaged in agriculture has been on the decline since World War II, high horsepower tractors and efficient harvesting systems are necessary to cultivate more acres with fewer workers to feed an ever-growing world population. Threats to profits in agriculture, such as natural disasters, climate change, and trade wars, increasingly challenge the profits and the viability of the farm machinery industry.

China's Global Political Economy Robert Taylor, Jacques Jaussaud, 2018-04-27 Much has been written about China's economy, as well as its business management system. China's Global Political Economy, however, is designed to bring together these two perspectives, serving to enhance our understanding of China's growing global role. Examining changes in the management strategies of foreign companies investing in China and Chinese enterprises doing business overseas, this book analyses China's political economy in the context of the Communist Party's changing policies. The introductory section begins by studying the aspects of Chinese economic growth as it impacts on domestic social issues and the projection of Chinese power abroad. Within this overall framework, it then goes on to critically assess the effects of foreign investment, business management strategies, human resource management, corporate social responsibility and the financial services sector. Arguing that the encouragement of consumption is a significant objective of the Chinese leadership, the last section is concerned with the importance of the food industry. This book will be of interest to students and scholars of Chinese business, management and international political economy, as well as policymakers and business practitioners.

Volume one focuses upon 50 topics and issues relating to the creation of hunger and famines in the world from 4000 BCE to 2100, including an overview of how agriculture has evolved from primitive hunting and gathering that supported limited numbers of people to a worldwide system that now feeds over seven billion people. Volume two, entitled Classic Famines, begins with famines of the past, from 4000 BCE to 2100 CE, includes ten classic famine case studies, and concludes with predictions of famines we could see in the 21st century and beyond.

The Global Rule of Three Jagdish Sheth,Can Uslay,Raj Sisodia,2020-12-10 In our increasingly digital, mobile, and global world, the existing theories of business and economics have lost much of their appeal with the phenomenal rise of Chindia, the reality of Brexit, the turmoil caused by the Covid-19 pandemic, and the seismic shifting of the global center of gravity from west to east. In the area of innovation, the traditional thinking that a developed country, often the US, will come up with the next major innovation, launch at home first, and then take it to other markets does not ring true anymore. Similarly, the world where conglomerates go bargain-hunting for acquisitions in emerging markets has been turned upside-down. This book reveals and illustrates the Global Rule of Three phenomenon, which stipulates that in competitive markets only three companies (which the authors call generalists) can dominate the market. All other players in the market are specialists. Further, whereas the financial performance of generalists improves as market share increases, specialist companies see a decrease in financial performance as their market share increases, as the latter are margin-driven companies. This theory powerfully captures the evolution of global markets and what executives must do to succeed. It is based on empirical analyses of hundreds of markets and industries in the US and globally. Competitive markets evolve in a predictable fashion across industries and geographies, where every industry goes through a similar lifecycle from beginning to end (or revitalization). From local to regional to national markets, the last stop in the evolution of markets is going global. The pattern is so consistent that it represents a distinct and natural market structure at every level. The authors offer strategies that generalists and specialist should follow to stay competitive as well as twelve expansion strategies for global companies from emerging markets. This book chronicles this global evolution and provides impactful managerial implications for executives and students of marketing and corporate strategy alike.

The Biofuels Deception Okbazghi Yohannes,2018-09-25 There is by now no question among informed people that the Earth is undergoing severe climate change - soon to become catastrophic, if humans don't take drastic measures to stop it. Heroically into the fray steps the biofuel industry, announcing to millions of anxious consumers that this eco-crisis can be averted if only they turn away from fossil fuels, to the saving power of synthetic bioproducts. But, although eliminating fossil fuels is essential, the manufacture of biofuels has far more to do with sating profit-hungry corporations than with saving the Earth. Combining meticulous scientific narrative with devastating economic analysis, The Biofuels Deception argues that the seemingly innovative, hopeful campaign for "green energy" is actually driven by bio-technology industries and global grain-trading corporations. These corporate players are motivated by a late-capitalist need to cope with a crisis of accumulation; they have no real interest in mitigating climate-change, alleviating poverty, or even creating "clean" energy. In fact, the manufacture of biochemical, bioplastics, and biomaterials, writes Okbazghi Yohannes, portends horrific contradictions and disastrous consequences for nature and society. Actually confronting climate change and the rampant inequality it engenders, Yohannes says, requires two steps. The first is to understand the driving socioeconomic forces behind the biofuels industry. The second is to unravel the tapestry of deceit itself. This book is a necessity for any scholar or environmental activist interested in seeing beyond corporate chimeras to actual environmental solutions.

The Rule of Three Jagdish Sheth,Rajendra Sisodia,2002-05-14 Name any industry and more likely than not you will find that the three strongest, most efficient companies control 70 to 90 percent of the market. Here are just a few examples: McDonald's, Burger King, and Wendy's General Mills, Kellogg, and Post Nike, Adidas, and Reebok Bank of America, Chase Manhattan, and Banc One American, United, and Delta Merck, Johnson & Johnson, and Bristol-Myers Squibb Based on extensive studies of market forces, the distinguished business school strategists and corporate advisers Jagdish Sheth and Rajendra Sisodia show that natural competitive forces shape the vast majority of companies under the rule of three. This stunning new concept has powerful strategic implications for businesses large and small alike. Drawing on years of research covering hundreds of industries both local and global, The Rule of Three documents the evolution of markets into two complementary sectors -- generalists, which cater to a large, mainstream group of customers; and specialists, which satisfy the needs of customers at both the high and low ends of the market. Any company caught in the middle (the ditch) is likely to be swallowed up or destroyed. Sheth and Sisodia show how most markets resemble a shopping mall with specialty shops anchored by large stores. Drawing wisdom from these markets, The Rule of Three offers counterintuitive insights, with suggested strategies for the Big 3 players, as well as for mid-sized companies that may want to mount a challenge and for specialists striving to flourish in the shadow of industry giants. The book explains how to recognize signs of market disruptions that can result in serious reversals and upheavals for companies caught unprepared. Such disruptions include new technologies, regulatory shifts, innovations in distribution and packaging, demographic and cultural shifts, and venture capital as well as other forms of investor funding. Years in the making and sweeping in scope, The Rule of Three provides authoritative, research-based insights into market dynamics that no business manager should be without.

Global Innovation Hotspots: A case study of São Paulo’s innovation ecosystem local capabilities and global networks World Intellectual Property Organization,Araujo, Veneziano,Coda-Zabetta, Massimiliano,García, Renato,Migueluez, Ernest,Raffo, Julio,2022-09-02 This report presents an in-depth study of the innovation ecosystem of São Paulo (Brazil). We use georeferenced patent, scientific publication, and economic data to characterize one of the few global innovation hotspots in Latin America and the southern hemisphere. It attempts to understand what makes São Paulo different from the rest of Brazil and the Latin American region by mapping what its main potentialities and drawbacks are. The report finds that São Paulo is rich in scientific activity, but lags behind with respect to patent production. At the same time, it is a patent leader in Brazil and the region with characteristics resembling the large innovation hotspots of the world. The report also shows where São Paulo is in the global knowledge space, and how it can leverage scientific production and global networks to upgrade into more complex technological activities. The report also reviews the main innovation policies at national and subnational level, which may partially explain the São Paulo’s success story.
