Hodd Adam Thorpe, 2010-12-07 Who was Robin Hood? Romantic legend casts him as outlaw, archer, and hero of the people, living in Sherwood Forest with Friar Tuck, Little John and Maid Marian, stealing from the rich to give to the poor - but there is no historical proof to back this up. The early ballads portray a quite different figure: impulsive, violent, vengeful, with no concern for the needy, no merry band, and no Maid Marian. Hodd provides a possible answer to this famous question, in the form of a medieval document rescued from a ruined church on the Somme, and translated from the original Latin. The testimony of an anonymous monk, it describes his time as a boy in the greenwood with a half-crazed bandit called Robert Hodd - who, following the thirteenth-century principles of the 'heresy of the Free Spirit', believes himself above God and beyond sin. Hodd and his crimes would have been forgotten without the boy's minstrel skills, and it is the old monk's cruel fate to know that not only has he given himself up to apostasy and shame, but that his ballads were responsible for turning a murderous felon into the most popular outlaw hero and folk legend of England, Robin Hood. Written with his characteristic depth and

subtlety, his sure understanding of folklore, his precise command of detail, Adam Thorpe's ninth novel is both a thrilling re-examination of myth and a moving reminder of how human innocence and frailty fix and harden into history.

Foreign Involvement in the Critical National Infrastructure Great Britain. Intelligence and Security Committee,Malcolm Rifkind,Great Britain. Parliament,2013-06-06 Certain telecommunications networks are a critical element of the UK's

infrastructure, the loss or compromise of which would have a major, detrimental impact on the availability or integrity of essential services, leading to severe economic or social consequences ... In the UK the Critical National Infrastructure (CNI) is now largely in the hands of private enterprises. There is potentially a conflict between the commercial imperative and national security. In 2003 BT, which is responsible for large parts of the UK's telecommunications structure, embarked on a major £10bn rationalisation and upgrade project (the 21st Century Network). A number of companies were selected to supply the various equipment required, one of which was Huawei, a Chinese telecommunications company. A contract for supply of transmission and access equipment, including routers, was signed in 2005, with this being deployed across the network from January 2007. Most of the concerns surrounding Huawei relate to its perceived links to the Chinese State. Huawei denies direct links with the Chinese Government or military, though the Committee notes that such links are considered normal in China. Huawei has also invested in the Cyber Security Evaluation Centre (the Cell), and the Committee is concerned that a Huawei-run Cell is responsible for providing assurance about Huawei products. The National Security Adviser should review the effectiveness of the Cell as a matter of urgency and GCHQ must have greater oversight. The risk to the CNI must be managed properly: alerts for foreign investment in CNI; risk assessment; ministers must be informed.

Mouse Development Jacek Z. Kubiak, 2012-08-23 The mouse is a perfect model organism to study mammalian, and thus indirectly also human, embryology. Most scientific achievements that have had an important impact on the understanding of basic mechanisms governing embryo development in humans, originated from mouse embryology. Stem cell research, which now offers the promise of regenerative medicine, began with the isolation and culture of mouse embryonic stem cells by Martin Evans (who received the Nobel Prize in medicine in 2007 for this achievement) and Matthew Kaufman. This book provides an overview of mouse development, spanning from oocytes before fertilization to the state-of-the-art description of embryonic and adult stem cells. The chapters, written by the leading specialists in the field, deal with the most recent discoveries in this extremely fast-developing area of research.
