**Volcanism in Antarctica: 200 Million Years of Subduction, Rifting and Continental Break-up** J.L. Smellie,K.S. Panter,A. Geyer,2021-06-09 This memoir is the first to review all of Antarctica’s volcanism between 200 million years ago and the Present. The region is still volcanically active. The volume is an amalgamation of in-depth syntheses, which are presented within distinctly different tectonic settings. Each is described in terms of (1) the volcanology and eruptive palaeoenvironments; (2) petrology and origin of magma; and (3) active volcanism, including tephrochronology. Important volcanic episodes include: astonishingly voluminous mafic and felsic volcanic deposits associated with the Jurassic break-up of Gondwana; the construction and progressive demise of a major Jurassic to Present continental arc, including back-arc alkaline basalts and volcanism in a young ensialic marginal basin; Miocene to Pleistocene mafic volcanism associated with post-subduction slab-window formation; numerous Neogene alkaline volcanoes, including the massive Erebus volcano and its persistent phonolitic lava lake, that are widely distributed within and adjacent to one of the world’s major zones of lithospheric extension (the West Antarctic Rift System); and very young ultrapotassic volcanism erupted subglacially and forming a world-wide type example (Gaussberg).

The European Antarctic P. Roberts,2011-12-19 This is the first transnational study of British, Norwegian, and Swedish engagement with the Antarctic. Rather than charting how Europeans unveiled the Antarctic, it uses the history of Antarctic activity as a window into the political and cultural worlds of twentieth-century Britain and Scandinavia.

**A Frozen Field of Dreams, Science, Strategy, and the Antarctic in Norway, Sweden, and the British Empire, 1912-1952** Peder William Chellew Roberts,2010 The dissertation examines how actors in Norway, Sweden, and the British Empire conceived the Antarctic as a space for science during the years 1912 to 1952. Instead of tracing a narrative of enlightenment, how science became the dominant form of activity in the Antarctic, I examine a series of episodes with particular attention to why particular kinds of science held sway within specific political, cultural, and economic contexts. Concerned more with how Antarctic science was planned and justified than how it was executed in the field, the project draws upon recent scholarship in geography and geopolitics, as well as the history of exploration. The six case studies involve an aborted Anglo-Swedish Antarctic expedition in 1912; Britain's interwar Antarctic whaling research program; debates among whaling magnates and their associates over the relationship between Antarctic science and whaling in interwar Norway; the culture of polar exploration that emerged at Cambridge (and to some extent Oxford) between the world wars; the approach to polar exploration and quantitative glaciology pioneered by the Swedish geographer Hans Ahlmann; and the complicated history of the Norwegian-British-Swedish Antarctic Expedition (1949-52). I conclude with an epilogue arguing that the rise of international science in the Antarctic during the 1950s reflected the geopolitical dynamics of the Cold War, rather than the triumph of science over politics.

**Science, Geopolitics and Culture in the Polar Region** Professor Sverker Sörlin,2013-10-28 Throughout the twentieth century, glaciologists and geophysicists from Denmark, Norway and Sweden made important scientific contributions across the Arctic and Antarctic. This research was of acute security and policy interest during the Cold War, as knowledge of the polar regions assumed military importance. But scientists also helped make the polar regions Nordic spaces in a cultural and political sense, with scientists from Norden punching far above their weight in terms of population, geographical size or economic activity. This volume presents an image of Norden that stretches far beyond its conventional limits, covering a vast area in the North Atlantic and the Arctic Sea, as well as parts of Antarctica. Rich in resources, scarce in population, but critically important in global and regional geopolitics, these spaces were contested by major powers such as Russia, the United States, Canada and, in the Antarctic, Argentina, Australia, South Africa and others. The empirical focus on Danish, Norwegian and Swedish influence in the polar regions during the twentieth century embraces a diverse array of themes, from the role of science in policy and diplomacy to the tensions between nationalism and internationalism, with clear relevance to the important role science plays in contemporary discussions about Nordic engagement with the polar regions.

Nature's End S. Sörlin,P. Warde,2009-07-23 Environmental History as a distinct discipline is now over a generation old, with a large and diverse group of practitioners around the globe. This book provides a reflection on the achievements, diversity, and direction of environmental history in its varied national, international and continental contexts.

**The Price of Exclusion** Eric Kurlander,2006-08-01 “The failure of Liberalism” in Germany and its responsibility for the rise of Nazism has been widely discussed among scholars inside and outside Germany. This author argues that German liberalism failed because of the irreconcilable conflict between two competing visions of German identity. In following the German liberal parties from the Empire through the Third Reich Kurlander illustrates convincingly how an exclusionary racist Weltanschauung, conditioned by profound transformations in German political culture at large, gradually displaced the liberal-universalist conception of a democratic Rechtsstaat. Although there were some notable exceptions, this widespread obsession with „racial community [Volksgemeinschaft]“ caused the liberal parties to succumb to ideological lassitude and self-contradiction, paving the way for National Socialism.
