Transdisciplinary Engineering for Resilience: Responding to System Disruptions L. Newnes,2021-11-17 No one discipline or person can encompass all the knowledge necessary to solve complex, ill-defined problems, or problems for which a solution is not immediately obvious. The concept of Concurrent Engineering (CE) – interdisciplinary, but with an engineering focus – was developed to increase the efficiency and effectiveness of the Product Creation Process (PCP) by conducting different phases of a product's life concurrently. Transdisciplinary Engineering has transcended CE, emphasizing the crucial importance of interdisciplinary openness and collaboration. This book presents the proceedings of the 28th ISTE International Conference on Transdisciplinary Engineering (TE2021). Held online from 5 – 9 July 2021 and entitled 'Transdisciplinary Engineering for Resilience: Responding to System Disruptions', this is the second conference in the series held virtually due to the COVID-19 pandemic. The annual TE conference constitutes an important forum for international scientific exchange on transdisciplinary engineering research, advances, and applications, and is attended by researchers, industry experts and students, as well as government representatives. The book contains 58 peer-reviewed papers, selected from more than 80 submissions and ranging from the theoretical and conceptual to strongly pragmatic and addressing industrial best practice. The papers are grouped under 6 headings covering theory; education and training; PD methods and digital TE; industry and society; product systems; and individuals and teams. Providing an overview of the latest research results and knowledge of product creation processes and related methodologies, the book will be of interest to all researchers, design practitioners, and educators working in the field of Transdisciplinary Engineering.

Air Ambulance and Commercial Helicopter Operations, Part 91 Helicopter Operations, and Part 135 Aircraft Operations - Safety Initiatives (Us Federal Aviation Administration Regulation) (Faa) (2018 Edition) The Law Library,2018-09-10 Air Ambulance and Commercial Helicopter Operations, Part 91 Helicopter Operations, and Part 135 Aircraft Operations - Safety Initiatives (US Federal Aviation Administration Regulation) (FAA) (2018 Edition) The Law Library presents the complete text of the Air Ambulance and Commercial Helicopter Operations, Part 91 Helicopter Operations, and Part 135 Aircraft Operations - Safety Initiatives (US Federal Aviation Administration Regulation) (FAA) (2018 Edition). Updated as of May 29, 2018 This proposed rule addresses air ambulance and commercial helicopter operations, part 91 helicopter operations, and load manifest requirements for all part 135 aircraft. From 2002 to 2008, there has been an increase in fatal helicopter air ambulance accidents. To address these safety concerns, the FAA is proposing to implement operational procedures and require additional equipment on board helicopter air ambulances. Many of these proposed requirements currently are found in agency guidance publications and would address National Transportation Safety Board (NTSB) safety recommendations. Some of these safety concerns are not unique to the helicopter air ambulance industry and affect all commercial helicopter operations. Accordingly, the FAA also is proposing to amend regulations pertaining to all commercial helicopter operations conducted under part 135 to include equipment requirements, pilot training, and alternate airport weather minima. The changes are intended to provide certificate holders and pilots with additional tools and procedures that will aid in preventing accidents. This book contains: - The complete text of the Air Ambulance and Commercial Helicopter Operations, Part 91 Helicopter Operations, and Part 135 Aircraft Operations - Safety Initiatives (US Federal Aviation Administration Regulation) (FAA) (2018 Edition) - A table of contents with the page number of each section

Springer Handbook of Augmented Reality Andrew Yeh Ching Nee,Soh Khim Ong,2023-01-01 The Springer Handbook of Augmented Reality presents a comprehensive and authoritative guide to augmented reality (AR) technology, its numerous applications, and its intersection with emerging technologies. This book traces the history of AR from its early development, discussing the fundamentals of AR and its associated science. The handbook begins by presenting the development of AR over the last few years, mentioning the key pioneers and important milestones. It then moves to the fundamentals and principles of AR, such as photogrammetry, optics, motion and objects tracking, and marker-based and marker-less registration. The book discusses both software toolkits and techniques and hardware related to AR, before presenting the applications of AR. This includes both end-user applications like education and cultural heritage, and professional applications within engineering fields, medicine and architecture, amongst others. The book concludes with the convergence of AR with other emerging technologies, such as Industrial Internet of Things and Digital Twins. The handbook presents a comprehensive reference on AR technology from an academic, industrial and commercial perspective, making it an invaluable resource for audiences from a variety of backgrounds.

Exploring a Chromakeyed Augmented Virtual Environment for Viability as an Embedded Training System for Military Helicopters Mark J. Lennerton,2004-06-01 Once the military helicopter pilot deploys aboard a naval vessel he leaves behind all training platforms, short of the actual aircraft, that present enough fidelity for him to maintain the highest levels of readiness. To that end, this thesis takes a preliminary step in creating a trainer that places the pilot in an immersive and familiar environment to exercise myriad piloting tasks as faithfully and as rigorously as in actual flight. The focus of this thesis it to assess the viability of an chromakeyed augmented virtual environment (ChrAVE) trainer embedded into a helicopter for use in maintaining certain perishable skills. Specifically this thesis will address the task of helicopter low-level land navigation. The ChrAVE was developed to substantiate the viability of having embedded trainers in helicopters. The ChrAVE is comprised of commercial off the shelf (COTS) equipment on a transportable cart. In determining whether a system such as the ChrAVE is viable as a laboratory for continued training in virtual environment, the opinion of actual pilots that were tasked with realistic workloads was used. Additionally, empirical data was collected and evaluated according to the subject pool's thresholds for acceptable low-level navigation performance.

Air Ambulance United States Government Accountability Office,2017-09-22 Helicopter air ambulances reduce transport times for critically ill patients during life-threatening emergencies. Although patients typically have little to no choice over the service or provider given the often emergency nature of the transports, they might be billed for charges that have potentially devastating financial impacts. GAO was asked to review air ambulance pricing. This report examines: (1) the prices charged for air ambulance service, (2) the factors that affect prices, and (3) stakeholders' views on any actions the federal government could take to address air ambulance pricing. To answer these questions GAO analyzed 2 years of data (2010 and 2014-the latest available) on prices from CMS and a private health insurance database; interviewed 26 stakeholders, such as 8 air ambulance providers chosen to represent a range of types (hospital-affiliated and independent) and sizes; and interviewed DOT and CMS officials.

Mixed and Augmented Reality in Medicine Terry M. Peters,Cristian A. Linte,Ziv Yaniv,Jacqueline Williams,2018-10-26 Augmented reality (AR) is transforming how we work, learn, play and connect with the world, and is now being introduced to the field of medicine, where it is revolutionising healthcare as pioneering virtual elements are being added to real images to provide a more compelling and intuitive view during procedures. This book, which had its beginnings at the AE-CAI: Augmented Environments for Computer-Assisted Interventions MICCAI Workshop in Munich in 2015, is the first to review the area of mixed and augmented reality in medicine. Covering a range of examples of the use of AR in medicine, it explores its relevance to minimally-invasive interventions, how it can improve the accuracy of a procedure and reduce procedure time, and how it may be employed to reduce radiation risks. It also discusses how AR can be an effective tool in the education of physicians, medical students, nurses and other health professionals. Features: An ideal practical guide for medical professionals and students looking to understand the implementation, applications, and future of AR Contains the latest developments and technologies in this innovative field Edited by highly respected pioneers in the field, who have been immersed in AR as well as virtual reality and image-guided surgery since their inception, with chapter contributions from subject area specialists working with AR

Handbook of Augmented Reality Training Design Principles Laura G. Militello,Christen E. Sushereba,Sowmya Ramachandran,2023-05-31 The Handbook of Augmented Reality Training Design Principles is for anyone interested in using augmented reality and other forms of simulation to design better training. It includes eleven design principles aimed at training recognition skills for combat medics, emergency department physicians, military helicopter pilots, and others who must rapidly assess a situation to determine actions. Chapters on engagement, creating scenario-based training, fidelity and realism, building mental models, and scaffolding and reflection use real-world examples and theoretical links to present approaches for incorporating augmented reality training in effective ways. The Learn, Experience, Reflect framework is offered as a guide to applying these principles to training design. This handbook is a useful resource for innovative design training that leverages the strengths of augmented reality to create an engaging and productive learning experience.

A Simulation Model of a Helicopter Ambulance Service ,2005 We study two different operational scenarios for a regional air ambulance service-company which has bases in northern California. Two of these bases serve the land areas encompassed roughly in a circular area of radius 100 miles centered in Gilroy and Salinas, respectively; with a large part of their coverage areas reachable from either base. The base in Salinas currently operates one helicopter only from Thursday to Monday, whereas the base in Gilroy operates one helicopter 24/7. The company is considering extending the operation of one helicopter to 24/7 for its Salinas base. In this paper we analyze the operational impacts of that extension, and develop a framework that can be applied towards the study of the ambulance assignment problem faced by small operators.

Safety and Quality in Medical Transport Systems John W. Overton,2017-03-31 The Commission on Accreditation of Medical Transport Systems (CAMTS) has been accrediting air and ground transport services since 1991. One of the most significant needs the Commission has recognized is to assist transport services in creating a culture that supports safety and quality for both crews and patients. Most of the helicopter EMS (emergency medical service) accidents and many ground ambulance accidents can be attributed to human factors and systems designs that lead to poor decision-making. Management commitment is vital to create and maintain a culture that supports risk assessment, accountability, professionalism and organizational dynamics. This reference book has been created by CAMTS to address this need directly and comprehensively. It offers a groundbreaking collection of expert insights and practical solutions that can be used by EMS, Fire and Rescue, public and private services, and professional emergency and transport professionals worldwide. Quoting from the foreword written by the late Robert L. Helmreich, Professor Emeritus of Psychology at The University of Texas Human Factors Research Project, 'This is an important book which should be required reading for everyone involved in patient transport, from managers and dispatchers to those at the sharp end... The experienced and able authors and editors of this work use culture as the overarching concept needed to maximize safety while delivering patients expeditiously.'
