**Exterior Insulation and Finish Systems** Canada Mortgage and Housing Corporation,British Columbia Wall and Ceiling Association,EIFS Council of Canada,2004 Exterior insulation & finish systems (EIFS) are products for cladding exterior walls that integrate insulation with a stucco-like covering. EIFS incorporate insulation board, a base coat with reinforcement, surface finish adhered to the base coat, and other parts such as joint treatments, drainage accessories, and seals. The purpose of this guide is to provide an understanding of EIFS, provide recommendations for EIFS best practices to promote satisfactory performance & durability, and to develop a framework for functional construction details & specifications that generally illustrates best design & construction practice. The introduction reviews the advantages & limitations of EIFS, problems experienced with EIFS deterioration, and aspects of cladding design. Chapter 2 describes selection of an EIFS system based on fire safety characteristics, rainwater penetration resistance, and impact resistance. Chapter 3 covers cladding design issues including substrate, air & vapour control, movement joints & crack control, interfaces, joint seals, and other durability considerations. Chapter 4 outlines factors to be addressed when using EIFS in retrofitting existing buildings. The last chapter contains construction details that exemplify best practices in EIFS applications. Appendices include a glossary and background technical information.

International Encyclopedia of Transportation ,2021-05-13 In an increasingly globalised world, despite reductions in costs and time, transportation has become even more important as a facilitator of economic and human interaction; this is reflected in technical advances in transportation systems, increasing interest in how transportation interacts with society and the need to provide novel approaches to understanding its impacts. This has become particularly acute with the impact that Covid-19 has had on transportation across the world, at local, national and international levels. Encyclopedia of Transportation, Seven Volume Set - containing almost 600 articles - brings a cross-cutting and integrated approach to all aspects of transportation from a variety of interdisciplinary fields including engineering, operations research, economics, geography and sociology in order to understand the changes taking place. Emphasising the interaction between these different aspects of research, it offers new solutions to modern-day problems related to transportation. Each of its nine sections is based around familiar themes, but brings together the views of experts from different disciplinary perspectives. Each section is edited by a subject expert who has commissioned articles from a range of authors representing different disciplines, different parts of the world and different social perspectives. The nine sections are structured around the following themes: Transport Modes; Freight Transport and Logistics; Transport Safety and Security; Transport Economics; Traffic Management; Transport Modelling and Data Management; Transport Policy and Planning; Transport Psychology; Sustainability and Health Issues in Transportation. Some articles provide a technical introduction to a topic whilst others provide a bridge between topics or a more future-oriented view of new research areas or challenges. The end result is a reference work that offers researchers and practitioners new approaches, new ways of thinking and novel solutions to problems. All-encompassing and expertly authored, this outstanding reference work will be essential reading for all students and researchers interested in transportation and its global impact in what is a very uncertain world. Provides a forward looking and integrated approach to transportation Updated with future technological impacts, such as self-driving vehicles, cyber-physical systems and big data analytics Includes comprehensive coverage Presents a worldwide approach, including sets of comparative studies and applications

**Faster, Further, Higher** Philip Jarrett,2002 This volume concentrates on the key developments that prepared the way for the sophisticated civil and military aeroplanes of the 21st century. The first chapter makes a study of the way transonic and supersonic aerodynamics have shaped aeroplane design. The next essay explains how aerodynamic developments have led to technological developments in the cockpit to keep pace with the faster speeds and higher altitudes possible. The third major step in post-war aircraft technology came with the development of in-flight refuelling technologies, and the next chapter covers this. Succeeding chapters cover such technological developments as the use of new materials, the need to make jet engines more fuel efficient, developments in avionics and the problems of mass-producing high-technology aircraft. AIR CRASH INVESTIGATIONS, WHY DID IT HAPPEN? The Crash of Sikorsky S-76A Helicopter G-BJVX Hank Williamson, editor,2012-08-01 On March 23, 2004, about 1918:34 central standard time, an Era Aviation Sikorsky S-76A helicopter, N579EH, crashed into the Gulf of Mexico about 70 nautical miles south-southeast of Scholes International Airport (GLS), Galveston, Texas. The helicopter was en route to the drilling ship Discoverer Spirit. The captain, copilot, and eight passengers aboard the helicopter were killed, and the helicopter was destroyed by impact forces. The flight was operating under the provisions of 14 Code of Federal Regulations Part 135 on a visual flight rules flight plan.
