Education for the 21st Century - Impact of ICT and Digital Resources Deepak Kumar,Joe Turner,2006-10-11 It is a pleasure to offer you this book containing papers about ICT and education from the World Computer Congress 2006 (WCC 2006), held in Santiago, Chile and sponsored by the International Federation for Information Processing (IFIP). A lot of people worked very hard to make this event happen and to produce this book. The programme committee with IFIP members from around the world issued a call for papers inspiring almost 80 people to submit papers, posters, demonstrations, and workshops to the IFIP TC3 (Technical Committee on Education) sub-conference of WCC 2006. The submitted papers were reviewed by a large group of referees to select the papers to be presented at the conference. What is really amazing is that all these people freely contributed their time and effort to do all this work. The TC3 sub-conference of WCC 2006 has two themes: Informatics Curricula, TEaching Methods and best practice (ICTEM II), and Teaching and Learning with ICT: Theory, Policy and Practice. These themes represent many of the broad range of interests of the Working Groups of IFIP TC3. Two kinds of papers are included in this book: full papers and short papers. Full papers are standard papers that are appropriate for an international conference on ICT and informatics education. Of the 64 full paper submissions, 28 (44%) were accepted. A short paper represents work in progress, opinion, a proposal, work with untested results, or an experience report.

The American Way of Bombing Matthew Evangelista,Henry Shue,2014-08-21 Aerial bombardment remains important to military strategy, but the norms governing bombing and the harm it imposes on civilians have evolved. The past century has seen everything from deliberate attacks against rebellious villagers by Italian and British colonial forces in the Middle East to scrupulous efforts to avoid collateral damage in the counterinsurgency and antiterrorist wars of today. The American Way of Bombing brings together prominent military historians, practitioners, civilian and military legal experts, political scientists, philosophers, and anthropologists to explore the evolution of ethical and legal norms governing air warfare. Focusing primarily on the United States—as the world’s preeminent military power and the one most frequently engaged in air warfare, its practice has influenced normative change in this domain, and will continue to do so—the authors address such topics as firebombing of cities during World War II; the atomic attacks on Hiroshima and Nagasaki; the deployment of airpower in Iraq, Afghanistan, and Libya; and the use of unmanned drones for surveillance and attacks on suspected terrorists in Pakistan, Yemen, Sudan, Somalia, and elsewhere.

Intelligent Autonomy of UAVs Yasmina Bestaoui Sebbane, 2018-03-14 Intelligent Autonomy of UAVs: Advanced Missions and Future Use provides an approach to the formulation of the fundamental task typical to any mission and provides guidelines of how this task can be solved by different generic robotic problems. As such, this book aims to provide a systems engineering approach to UAV projects, discovering the real problems that need to be resolved independently of the application. After an introduction to the rapidly evolving field of aerial robotics, the book presents topics such as autonomy, mission analysis, human-UAV teams, homogeneous and heterogeneous UAV teams, and finally, UAV-UGV teams. It then covers generic robotic problems such as orienteering and coverage. The book next introduces deployment, patrolling, and foraging, while the last part of the book tackles an important application: aerial search, tracking, and surveillance. This book is meant for both scientists and practitioners. For practitioners, it presents existing solutions that are categorized according to various missions: surveillance and reconnaissance, 3D mapping, urban monitoring, precision agriculture, forestry, disaster assessment and monitoring, security, industrial plant inspection, etc. For scientists, it provides an overview of generic robotic problems such as coverage and orienteering; deployment, patrolling and foraging; search, tracking, and surveillance. The design and analysis of algorithms raise a unique combination of questions from many fields, including robotics, operational research, control theory, and computer science.
