The rapid growth of the aviation industry, propelled by catalysts like Liberalization, Privatization and Globalization has in recent years given a major fillip to the global economy in terms of facilitating international trade, generating employment, foreign exchange earnings, and prosperity from tourism, industrial growth and technological development. The potential market for air transport has shown signs of a strong global resurgence, with the Asia

Pacific region's performance far exceeding the world average growth&.with India and China being projected as the hottest growth sectors.The Indian aviation industry has shown impressive growth, contributing 1.0%, 8.0% and 69% share at the global, Asia Pacific and South Asian regional levels respectively. Key players such as Boeing, Airbus Industrie, ACI, IATA and ICAO envisage that India will touch 100 million passengers by 2010. Meanwhile, the Indian Government has responded suitably, inter alia by encouraging private sector participation in the development of the civil aviation sector. Over ten chapters, this informative book elucidates all the concepts fundamental to the management of air transport, illuminating the factors key to operational, infrastructural and public policy in the development of air transport.

***History of Air Cargo and Airmail from the 18th Century* Camille**

Allaz,2005-03 It was first published in French by the Institut du

Transport Aerien in 1998 and received very favourable reviews.

Through the publication of the English language edition, this

remarkable work is now accessible to many more readers around

the world. In addition, the author has expanded the book with new

sections and he has extensively updated it to bring the story of air

cargo into the twenty first century, concluding with a look into the

future. The author, Camille Allaz, served as Senior Vice President

Cargo at Air France for 10 years which gave him an insider's

close-up view of his subject, a privilege not enjoyed by many

historians. There is no aspect of mail or cargo transport by air that

has not been thoroughly researched and documented by Allaz,

from the first brief transport of animals by balloon in France in 1783

to the vast global networks of the integrated express carriers in the

21st century. As a true scholar, he fits his narrative into the larger

framework of political, military, economic and aviation history. This book should stand for years as the definitive work on the history of air cargo and airmail, and will be of immense value to the academic community, to the air cargo industry, the postal services, and to the general public.
