Archie to SAM Air University Press,U. S. Military,Department of Defense (DoD),Kenneth P. Werrell,U. S. Air Force (USAF),2017-09-30 Archie to SAM is an update in 2005 to Kenneth Werrell's Archie, Flak, AAA, and SAM.

He continues to study ground-based air defense systems in new events, including the Gulf War. In rescuing ground-based air defense systems from long neglect, Werrell delves into such topics as tactics, leadership, change, and innovation. Dr. Kenneth Werrell's history of ground-based air defense performs an important service both to scholarship and, more importantly, to the defense of our nation's freedom. It is perhaps human nature that we tend over time to lose sight of the lessons of the past, especially when they do not conform to certain cherished preconceptions of ours. That such myopia can be dangerous, if not downright disastrous, Dr. Werrell's study richly illustrates. Without sentimentalism, he chronicles a pattern of lessons learned and too quickly forgotten as the marvel of air power was reminded again and again of its limitations and vulnerability. In Korea and in Vietnam, the American people were stripped of their illusions of national and technical omnipotence. The unhappy outcome of those two conflicts was doubly lamentable because the lessons of World War II were--or should have been--fresh in our minds. In that world war, as Dr. Werrell shows, relatively cheap ground-based air defense did make a difference: at Ploesti, at Antwerp, and at the Rhine bridges.And it will make a difference tomorrow. The greatest value of Dr. Werrell's work is that it provides guideposts and guidance for us as professional soldiers and aviators charged with upholding American security. We have taken history's lessons to heart as we plan and program our ground-based air defenses into the next decade and beyond. In both the forward and the rear areas, we have emphasized the time-honored principles of mass, mix, and mobility. No one weapon, not even today's modern aircraft, can do the job alone. The truism applies with particular force to antiaircraft defense. And at least one other truism emerges from Dr. Werrell's and our own studies: effective air defense requires a joint and combined effort. Our planning has been predicated on the assumption that counterair will play a central role in safeguarding our ground forces from air attack. On the ground, the air defense artillery will count on the cooperation and assistance of our colleagues in the infantry, armor, and field artillery. On our success or failure in working together to meet the challenges of tomorrow will rest our nation's future.

Armed Escort for Special Air Operations - An Operational Concept, World War II, Korea, Vietnam, Order of Battle Analysis, Special Operations Forces (SOF), Helicopters, Aircraft, Electronic Combat U. S.

Military,Department of Defense (DoD),U. S. Air Force (USAF),U. S. Government,2017-05-04 This unique book study hypothesizes that armed escort is required to protect special operations lift helicopters inserting, extracting, or resupplying SOF ground teams deep in the enemy rear. It compares the escort doctrine and tactics utilized by conventional air assets with current special operations tactics in light of the rapidly increasing threat among lesser developed nations. This study is based upon a Soviet-style, Third World threat. As the Soviet Union continues to modernize and field new air defense systems and interceptor aircraft, much of the older and some modern equipment is sold or given to allies, clients, and surrogates. The proliferation of highly capable weapons among developing nations has improved their air defenses and significantly complicated the problem of special air operations attempting clandestine penetrations. Beginning with the historical perspective of armed escort, then examining the current and projected threat, this study concludes that armed escort is indeed required to counter the increasingly capable and proliferating air defense threat. Based upon Phase One of the Concept Based Requirements System, Concept Formulation, this thesis proposes an Operational Concept for armed escort. The doctrine and tactics for armed escort during deep air assault and deep attack missions already exist in Army and Air Force doctrinal and tactics manuals. Conventional doctrine needs modification, though, to meet the unique requirements of clandestine penetrations 200 or more miles in depth. Part of the adjustment has to be in mindset-forcible entry is the least preferred option in most special operations Direct Action or Special Reconnaissance scenarios. Many questions and issues raised by this study warrant further attention. Among these are electronic combat implications, appropriate mix of weapons, and training issues. The intent of this thesis, however, was to propose the initial Operational Concept within allowable classification limits and stimulate future quantitative and qualitative studies.
