Research Anthology on Reliability and Safety in Aviation Systems, Spacecraft, and Air Transport Management Association, Information Resources,2020-09-24 As with other transportation methods, safety issues in aircraft can result in a total loss of life. Recently, the air transport industry has come under immense scrutiny after several deaths occurred due to aircraft design and airlines that allowed improperly inspected aircraft to fly. Spacecraft too have found errors in system software that could lead to catastrophic failure. It is imperative that the aviation and aerospace industries continue to revise and refine safety protocols from the construction and design of aircraft, to secure and improve aviation systems, and to test and inspect aircraft. The Research Anthology on Reliability and Safety in Aviation Systems, Spacecraft, and Air Transport is a vital reference source that examines the latest scholarly material on the use of adaptive and assistive technologies in aviation to establish clear guidelines for the design and implementation of such technologies to better serve the needs of both military and civilian pilots. It also covers new information technology use in aviation systems to streamline the cybersecurity, decision making, planning, and design processes within the aviation industry. Highlighting a range of topics such as air navigation systems, computer simulation, and airline operations, this multi-volume book is ideally designed for pilots, scientists, engineers, aviation operators, air traffic controllers, air crash investigators, teachers, academicians, researchers, and students.

The Inside Man Stacey L. Tyler,2016-12-01 Organizational communication impacts service efficiency and productivity. An increase in federal funding to strengthen communication within the airport stakeholders has failed to deliver expected results. The purpose of this qualitative case study is to explore whether miscommunication among the TSA agents and airport employees relates to effective implementation of airport security policies. The central research question focuses on the degree to which miscommunication between the TSA and airlines regarding prohibited items at security checkpoints impeded the effective execution of federal law regarding carry on luggage on commercial aircraft. Using Weick's organizational information theory, this study examines the implementation of airport security policy focusing on communication between government and industry organizations. A sample of 13 private airline employees and 7 airport employees at a large U.S. commercial airport participated in the study. Data was collected via semi structured interview questions. Data was coded and analyzed following an inductive coding strategy. According to study results, there is very little evidence of miscommunications between government and airline stakeholders regarding policy changes and expectations related to security procedures. However, miscommunication about the same policy changes to consumers confuses travelers, which may explain incidences of prohibited items at the security checkpoints. Implications for positive social change related to this study may assist policy makers in clarifying language to better inform travelers about security changes and prohibited items, the objective of which will promote safer flying experiences, reduce the potential for harm, and result in more expedient traveling.
