The Dream Machine Richard Whittle,2010-04-27 WHEN THE MARINES decided to buy a helicopter-airplane hybrid “tiltrotor” called the V-22 Osprey, they saw it as their dream machine. The tiltrotor was the aviation equivalent of finding the Northwest Passage: an aircraft able to take off, land, and hover with the agility of a helicopter yet fly as fast and as far as an airplane. Many predicted it would reshape civilian aviation. The Marines saw it as key to their very survival. By 2000, the Osprey was nine years late and billions over budget, bedeviled by technological hurdles, business rivalries, and an epic political battle over whether to build it at all. Opponents called it one of the worst boondoggles in Pentagon history. The Marines were eager to put it into service anyway. Then two crashes killed twenty- three Marines. They still refused to abandon the Osprey, even after the Corps’ own proud reputation was tarnished by a national scandal over accusations that a commander had ordered subordinates to lie about the aircraft’s problems. Based on in-depth research and hundreds of interviews, *The Dream Machine* recounts the Marines’ quarter-century struggle to get the Osprey into combat. Whittle takes the reader from the halls of the Pentagon and Congress to the war zone of Iraq, from the engineer’s drafting table to the cockpits of the civilian and Marine pilots who risked their lives flying the Osprey—and sometimes lost them. He reveals the methods, motives, and obsessions of those who designed, sold, bought, flew, and fought for the tiltrotor. These stories, including never before published eyewitness accounts of the crashes that made the Osprey notorious, not only chronicle an extraordinary chapter in Marine Corps history, but also provide a fascinating look at a machine that could still revolutionize air travel.

The Final Mission of Extortion 17 Ed Darack,2017-09-19 On August 6, 2011, a U.S. Army CH-47D Chinook helicopter approached a landing zone in Afghanistan 40 miles southwest of Kabul. The helicopter, call sign Extortion 17, was on a mission to reinforce American and coalition special operations troops. It would never return. Insurgents fired at the Chinook, severed one of its rear rotor blades, and brought it crashing to the ground. All 38 onboard perished instantly in the single greatest moment of sacrifice for Americans in the war in Afghanistan. Those killed were some of the U.S.'s most highly trained and battle-honed commandos, including 15 men from the Gold Squadron of the Naval Special Warfare Development Group, known popularly as SEAL Team 6, which had raided a Pakistan compound and killed Osama bin Laden just three months earlier. The downing of Extortion 17 spurred a number of conspiracy theories, such as the idea that the shootdown was revenge for bin Laden's death. In *The Final Mission of Extortion 17*, Ed Darack debunks this theory and others and uncovers the truth behind this mysterious tragedy. His account of the brave pilots, crew, and passengers of Extortion 17 and the events of that fateful day is interwoven into a rich, complex narrative that also discusses modern joint combat operations, the history of the Afghan war to that date, U.S. helicopter use in Afghanistan, and the new and evolving military technologies and tactics being developed to mitigate such tragedies now and in the future. From F-4 Phantom to A-10 Warthog Steven K Ladd,2020-09-30 Fighter pilots! Images of Baron Manfred von Richthofen and Eddie Rickenbacker in the Great War, Johnnie Johnson, Robert Stanford Tuck and Richard Bong in the Second World War, or Robin Olds in Vietnam, all spring to mind. Volumes have been written about them, past and present. Understandably, most of these revolve around the skill, cunning and bravery that characterizes this distinctive band of brothers, but there are other dimensions to those who take to the skies to do battle that have not been given the emphasis they deserve – until now. You do not have to be an aviation aficionado to enjoy Colonel Steve Ladd’s fascinating personal tale, woven around his 28-year career as a fighter pilot. This extremely engaging account follows a young man from basic pilot training to senior command through the narratives that define a unique ethos. From the United States to Southeast Asia; Europe to the Middle East; linking the amusing and tongue-in-cheek to the deadly serious and poignant, this is the lifelong journey of a fighter pilot. The anecdotes provided are absorbing, providing an insight into life as an Air Force pilot, but, in this book, as Colonel Ladd stresses, the focus is not on fireworks or stirring tales of derring-do. Instead, this is an articulate and absorbing account of what life is really like among a rare breed of arrogant, cocky, boisterous and fun-loving young men who readily transform into steely professionals at the controls of a fighter aircraft. *From F-4 Phantom to A-10 Warthog* is a terrific read: the legacy of a fighter pilot.

The Crash Detectives Christine Negroni,2016-09-27 NEW YORK TIMES BESTSELLER “Negroni is a talented aviation journalist who clearly understands the critically important part the human factor plays in aviation safety.” —Captain Chesley “Sully” Sullenberger, pilot of US Airways 1549, the Miracle on the Hudson A fascinating exploration of how humans and machines fail—leading to air disasters from Amelia Earhart to MH370—and how the lessons learned from these accidents have made flying safer. In *The Crash Detectives*, veteran aviation journalist and air safety investigator Christine Negroni takes us inside crash investigations from the early days of the jet age to the present, including the search for answers about what happened to the missing Malaysia Airlines Flight 370. As Negroni dissects what happened and why, she explores their common themes and, most important, what has been learned from them to make planes safer. Indeed, as Negroni shows, virtually every aspect of modern pilot training, airline operation, and airplane design has been shaped by lessons learned from disaster. Along the way, she also details some miraculous saves, when quick-thinking pilots averted catastrophe and kept hundreds of people alive. Tying in aviation science, performance psychology, and extensive interviews with pilots, engineers, human factors specialists, crash survivors, and others involved in accidents all over the world, *The Crash Detectives* is an alternately terrifying and inspiring book that might just cure your fear of flying, and will definitely make you a more informed passenger. “Christine Negroni combines her investigative reporting skills with an understanding of the complexities of air accident investigations to bring to life some of history’s most intriguing and heartbreaking cases.” —Bob Woodruff, ABC News

The Value of the Moon Paul D. Spudis,2016-04-26 While the Moon was once thought to hold the key to space exploration, in recent decades, the U.S. has largely turned its sights toward Mars and other celestial bodies instead. In *The Value of the Moon*, lunar scientist Paul Spudis argues that the U.S. can and should return to the moon in order to remain a world leader in space utilization and development and a participant in and beneficiary of a new lunar economy. Spudis explores three reasons for returning to the Moon: it is close, it is interesting, and it is useful. The proximity of the Moon not only allows for frequent launches, but also control of any machinery we place there. It is interesting because recorded deep on its surface and in its craters is the preserved history of the moon, the sun, and indeed the entire galaxy. And finally, the moon is useful because it is rich with materials and energy. The moon, Spudis argues, is a logical base for further space exploration and even a possible future home for us all. Throughout his work, Spudis incorporates details about man's fascination with the moon and its place in our shared history. He also explores its religious, cultural, and scientific resonance and assesses its role in the future of spaceflight and our national security and prosperity.
