Airbus A319/320 Pilot Upgrade Preparation Faraz Sheikh, 2020-05-27 This book is developed using material and pilot training notes including official Airbus FCOM, FCTM and the QRH to allow Pilots to study as a refresher or prepare for their command upgrade. It covers failure management, ECAM, Airbus memory item drills, complex and demanding failures, technical reviews on systems, limitations, low visibility procedures, RVSM/PBN, MEL/CDL and supplementary information covering cold weather and icing, windshears, weather and wake turbulence. The memory item drills include: Loss of braking, Emergency descent, Stall recovery, Stall warning at lift-off, Unreliable airspeed, GPWS/EGPWS warnings and cautions, TCAS warnings and Windshears. The complex and demanding failure chapter goes in depth with failures such as: Dual Bleed faults, Smoke/Fumes cases, Dual FMGC failure, Engine malfunctions of all levels, Fuel leak, Dual Hydraulic faults, Landing gear problems, Rejected takeoff and evacuation, Upset preventions and much more. Technical revision gives a good study highlight for all the Airbus A320 systems including Air conditioning, Ventilation and Pressurisation, Electrical, Hydraulics, Flight-Controls and Automation, Landing gear, Pneumatics, etc. The later chapters of the book covers useful topics such as aircraft limitations, low visibility procedures, RVSM/PBN, MEL, CDL and other supplementary information such as cold weather and icing, turbulence and windshears in more detail. The book will no doubt be a great asset to any

trainee or existing Airbus Pilot for both revision and training purposes including refresher training.

Human Factors Testing and Evaluation D. Meister, 2014-06-28 Human factors measurement has characteristics that set it apart from psychological or engineering measurement and for that reason, human factors testing and evaluation deserves special treatment. The many excellent texts available in the behavioral area do not give an adequate picture of this topic, and this is particularly unfortunate because testing and evaluation (T&E) is an integral part of human-machine system design and operation. The emphasis in this book is on why and how to conduct such testing. One of its outstanding features is its pragmatism; based on his past experience in system testing, the author recognizes the difficulties that occur in testing and indicates how these may be overcome or minimized. Special attention has been paid to the context in which T&E is conducted. Although the book contains detailed procedures for performing T&E, the logic and the conceptual foundation of testing have not been overlooked. Comparisons are made with laboratory-centered experimentation. For those with research interests, the author points out the many research questions that can be answered by system testing. An illustrative case history of a T&E program for a fictional system

has been included to provide ``real life'' context. Special problem areas in T&E are emphasized, in particular human error data collection, the evaluation of computerized systems and software, the measurement of maintenance technician and team performance; workload and training effectiveness testing. Special attention is also paid to environmental testing (e.g. temperature, lighting, noise, vibration, etc.). One chapter reviews all the relevant T&E literature including government documents that may not be readily available to the general reader. As part of the preparation for writing this text a survey was made of 45 distinguished T&E specialists in order to determine their characteristic T&E practices. The book will be useful not only to the human factors professional who specializes in T&E, but to all students and practitioners interested in human factors and work measurement.
