Landside | Airside Victor Marquez, 2019-01-18 Why do we love and hate airports at the same time? Have you been a victim of tiresome walks, congestion, long lines, invasive pat-downs, eternal delays and so on? Perhaps no other technological system has been challenged by continuously changing paradigms like airports. Think a minute on rail stations; think of how successful are the rail networks of the world in connecting nations, with just minimum security measures. Why aviation and airports are so radically different in this regard? In order to answer those questions the author embarks on a thorough revision of airport history and airport planning that in the end builds up a new theory about how airports are formed from the outset. Within its journey from the early airfield to the newest hubs of today, Dr. Marquez identifies for the first time the Landside–Airside boundary as the single most important feature that shapes an airport. In this sense, his finding challenges the “historical linearity” that, until today, used to explain a century of airports. From both an analytical and theoretical S&TS stance, Dr. Marquez assures that it is only when airports needed to be fully reinvented (LaGuardia, Dulles and Tampa) when they become transparent and we may be able to understand their lack of technological stability.

The Evolution of Grammar Joan Bybee, Revere Perkins, William Pagliuca, 1994-11-15 Joan Bybee and her colleagues present a new theory of the evolution of grammar that links structure and meaning in a way that directly challenges most contemporary versions of generative grammar. This study focuses on the use and meaning of grammatical markers of tense, aspect, and modality and identifies a universal set of grammatical categories. The authors demonstrate that the semantic content of these categories evolves gradually and that this process of evolution is strikingly similar across unrelated languages. Through a survey of seventy-six languages in twenty-five different phyla, the authors show that the

same paths of change occur universally and that movement along these paths is in one direction only. This analysis reveals that lexical substance evolves into grammatical substance through various mechanisms of change, such as metaphorical extension and the conventionalization of implicature. Grammaticization is always accompanied by an increase in frequency of the grammatical marker, providing clear evidence that language use is a major factor in the evolution of synchronic language states. The Evolution of Grammar has important implications for the development of language and for the study of cognitive processes in general.
