Airplane Reading Christopher Schaberg, Mark Yakich, 2016-07-29 In *Airplane Reading*, Christopher Schaberg and Mark Yakich bring together a range of essays about air travel. Discerning and full of wonder, this prismatic collection features perspectives from a variety of writers, airline workers, and everyday travelers. At turns irreverent, philosophical, and earnest, each essay is a veritable journey in and of itself. And together, they illuminate the at once strange and ordinary world of flight. *A Week at the Airport* Alain De Botton, 2010-09-21 The bestselling author of *The Architecture of Happiness* and *The Art of Travel* spends a week at an airport in a wittily intriguing meditation on the non-place that he believes is the centre of our civilization. In the summer of 2009, Alain de Botton was invited by the owners of Heathrow airport to become their first ever writer-in-residence. Given unprecedented, unrestricted access to wander around one of the world's busiest airports, he met travellers from all over the globe, and spoke with everyone from baggage handlers to pilots, and senior executives to the airport chaplain. Based on these conversations he has produced this extraordinary meditation on the nature of travel, work, relationships, and our daily lives. Working with the renowned documentary photographer Richard Baker, he explores the magical and the mundane, and the interactions of travellers and workers all over this familiar but mysterious non-place, which by definition we are eager to leave. Taking the reader through departures, air-side, and the arrivals hall, de Botton shows with his usual combination of wit and wisdom that spending time in an airport can be more revealing than we might think.

**A Day at an Airport** Sarah Harrison, 2008-09-01 Illustrates the daily activities at an airport, including a rock star arrival, a flight delay, and a thunderstorm.

The Textual Life of Airports Christopher Schaberg, 2011-12-01 This is a book about airport stories. It is about common narratives of airports that circulate in everyday life, and about the secret stories of airports-the strange or hidden narratives that do not always fit into standard ideas of these in-between places. Tales of near disaster, endless delays, dramatic weather shifts, a lost bag that suddenly appears-such stories are familiar accounts of a place that seems to thrive on and recycle its own mythologies. *The Textual Life of Airports* shows how airports demand to be read. Working at the intersection of literary studies and cultural theory, Schaberg tracks airport stories in American literature, as well as in a range of visual texts (film, airport art, magazine illustrations). It accounts for how airports appear in literature throughout the twentieth-century, while also examining the influx of airport figures in markedly post-9/11 literature and culture. These literary and cultural representations work together to form the textual life of airports.

**Airport Aura** Lilian Mironov, 2020-02-26 Throughout the 20th century and into the 21st, the emergence of airports as gateways for their cities has turned into one of the most important architectural undertakings. Ever since the first manned flight by the Brothers Orville and Wilbur Wright on December 17th 1903, utilitarian sheds next to landing strips on cow pastures evolved into a completely new building type over the next few decades – into places of Modernism as envisioned by Le Corbusier and Frank Lloyd Wright (who themselves never built an airport), to eventually turn into icons of cultural identity, progress and prosperity. Many of these airports have become architectural branding devices of their respective cities, regions and countries, created by some of the most notable contemporary architects. This interdisciplinary cultural study deals with the historical formation and transformation of the architectural typology of airports under the aspect of spatial theories. This includes the

shift from early spaces of transportation such as train stations, the synesthetic effect of travel and mobility and the effects of material innovations on the development, occupation and use of such spaces. The changing uses from mere utilitarian transportation spaces to ones centered on the spectacular culture of late capitalism, consumption and identity formation in a rapidly changing global culture are analyzed with examples both from architectural and philosophical points of view. The future of airport architecture and design very much looks like the original idea of the Crystal Palace and Parisian Arcades: to provide a stage for consumption, social theatre and art exhibition.

*Flying to See Janet* Laura Vickers, Peggy Wargelin, 2012 Presents a story to prepare children for the unfamiliar sights and sounds of the airport experience.

*Department of Transportation and Related Agencies Appropriations for 1978* United States. Congress. House. Committee on Appropriations. Subcommittee on Department of Transportation and Related Agencies Appropriations, 1977

*Near Field Communications Technology and Applications* Mike Hendry, 2015 Everything you need to know about NFC technology, its applications, implementation, common obstacles and strategies to overcome them.

*Airport Terminals* Christopher J. Blow, 2013-10-22 Airport Terminals covers the significance of airport terminals and the politics of design. This book is organized into seven parts encompassing 28 chapters that examine the architectural quality of airport terminals. The first part highlights the basic terminal design principles, including considerations of location, size, capacity, and functional types. The subsequent parts consider the "taxonomy of aircraft terminal forms and the external landside factors. These topics are followed by descriptions of the policies, layouts, configurations, data sheets, baggage handling, flight information systems, signage, and fire criteria of airport terminals. The final parts look into the external airside factors, such as aircraft docking and loading, as well as the redevelopment of existing airport terminals. This book will be of use to architects, engineers, and airport terminal managers.

*Keywords for Travel Writing Studies* Charles Forsdick, Zoë Kinsley, Kathryn Walchester, 2019-04-22 Keywords for Travel Writing Studies draws on the notion of the 'keyword' as initially elaborated by Raymond Williams in his seminal 1976 text *Keywords: A Vocabulary of Culture and Society* to present 100 concepts central to the study of travel writing as a literary form. Each entry in the volume is around 1,000 words, the style more essayistic than encyclopaedic, with contributors reflecting on their chosen keyword from a variety of disciplinary perspectives. The emphasis on travelogues and other cultural representations of mobility drawn from a range of national and linguistic traditions ensures that the volume has a comparative dimension; the aim is to give an overview of each term in its historical and theoretical complexity, providing readers with a clear sense of how the selected words are essential to a critical understanding of travel writing. Each entry is complemented by an annotated bibliography of five essential items suggesting further reading.
