Installation of Automated Weather Observing Systems by FAA at Commercial Airports is Not Justified United States. General Accounting Office, 1985

Aviation Weather Services National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, National Aviation Weather Services Committee, 1995-11-02 Each time we see grim pictures of aircraft wreckage on a rain-drenched crash site, or scenes of tired holiday travelers stranded in snow-covered airports, we are reminded of the harsh impact that weather can have on the flying public. This book examines issues that affect the provision of national aviation weather services and related research and technology development efforts. It also discusses fragmentation of responsibilities and resources, which leads to a less-than-optimal use of available weather information and examines alternatives for responding to this situation. In particular, it develops an approach whereby the federal government could provide stronger leadership to improve cooperation and coordination among aviation weather providers and users.

Airport Surface Weather Observation Options for General Aviation Airports

Adam Switzer,L. William Kelly (III),Kate DeJarnette,2019 This report identifies currently available options for providing airport surface weather observations at general aviation airports. Surface weather observations are an important component of many operational decisions at general aviation airports, particularly those related to go/no go, runway and approach selection, and crosswind landings. In some cases, specific airport surface weather observation information is required to meet regulatory requirements for specific types of aviation operations, including takeoffs and landings under instrument flight rules. The need for surface weather observations at general aviation airports varies depending on the type of operations that an airport can, or wishes to, support. This study is based on information acquired through a literature review and survey results from 27 airports participating in the study located in several geographic regions across the United States. Results of the literature review and survey and case examples describing the different types of surface weather observing capabilities currently employed at general aviation airports are presented. -- Publisher's website.

Automated Low-cost Weather Observation System (ALWOS) ,1982 One of the primary objectives of this program was to design a developmental model ALWOS for the lowest possible cost. Reliability and maintenance costs over the life of the system were considered in addition to the initial purchase and installation costs. To this end, field proven, off the shelf components were

used wherever possible throughout the system. Another primary objective was modularity of design. The hardware and software were constructed to allow flexibility in interfacing a variety of sensors or adding additional sensors to measure new parameters. The ALWOS as configured at Dulles Airport is a low-cost and flexible system which can provide an automatic weather observation from the data acquisition, processing and display point of view, with the potential for good long-term system reliability. After a period of familiarization with the equipment and dealing with an assortment of system and sensor problems, the functioning of the system became relatively trouble-free. Evaluation of the ALWOS supports the generally accepted concept that automated, low-cost weather observation systems can indeed perform such a function given suitable sensing devices. (Author).

Addressing Significant Weather Impacts on Airports Steven Barrett, ICF International (Firm), Burrst, Inc. (Firm), KRAMER aerotek, 2016 TRB's Airport Cooperative Research Program (ACRP) Report 160: Addressing Significant Weather Impacts on Airports provides a web toolkit that raises airport operator awareness about vulnerabilities caused by significant weather events. The toolkit helps airports develop more robust contingency and recovery plans, in addition to their airport emergency plans. This toolkit focuses on events that are rare but plausible; that is, events that may have happened in the distant past, or in adjacent geographic areas, but are not common event types at the airport itself, and therefore may not be in the forefront of the airport managers' minds. -- Publisher's description

Time Series Analyses of Integrated Terminal Weather System Effects on System Airport Efficiency Ratings Elaine M. Pfleiderer, Scott M. Goldman, Thomas Raymond Chidester, 2007 The FAA has initiated efforts to improve weather information, forecasting, and dissemination to enhance both safety and operational efficiency. The FAA has also adopted the System Airport Efficiency Rate (SAER) as a metric of facility operating efficiency that accounts for weather by using either actual demand or the facility-set arrival rate as the denominator, reflecting a reduction in the published ability to handle departures or arrivals due to prevailing weather conditions. Interventions aimed at improving performance should be observable in our metrics. However, acceptance and widespread use of the SAER raises the question of whether a weather-adjusted measure is sensitive enough to evaluate the efficacy of interventions aimed at improving performance during inclement weather. One such intervention is the Integrated Terminal Weather System (ITWS). In the present study, we applied time series analysis to average daily and monthly SAERs at 13 airports. We modeled SAER data at each airport prior to ITWS implementation and then tested whether each ITWS build (i.e., subsequent software updates and added functionality) affected SAER values.--P. i.
