Alcohol and the Nervous System Edith V. Sullivan, Adolf Pfefferbaum, 2014-10-08 Alcohol is the most widely used drug in the world, yet alcoholism remains a serious addiction affecting nearly 20 million Americans. Our current understanding of alcohol's effect on brain structure and related functional damage is being revolutionized by genetic research, basic neuroscience, brain imaging science, and systematic study of cognitive, sensory, and motor abilities. Volume 125 of the Handbook of Clinical Neurology is a comprehensive, in-depth treatise of studies on alcohol and the brain covering the basic understanding of alcohol's effect on the central nervous system, the diagnosis and treatment of alcoholism, and prospect for recovery. The chapters within will be of interest to clinical neurologists, neuropsychologists, and researchers in all facets and levels of the neuroscience of alcohol and alcoholism. The first focused reference specifically on alcohol and the brain Details our current understanding of how alcohol impacts the central nervous system Covers clinical and social impact of alcohol abuse disorders and the biomedical consequences of alcohol abuse Includes section on neuroimaging of neurochemical markers and brain function

Drug Testing in the Workplace S. Macdonald, P. Roman, 2012-11-02 "Previous volumes have been well received and the present work should be no exception....In a field where advances contribute to the widening gap between clinician and researchers, this volume serves to close that distance."-*Alcoholism-Clinical and Experimental Research*, from a review of a previous volume

Research on Alcoholism Treatment Marc Galanter, 2006-04-11 From the President of the Research Society on Alcoholism The sixteenth volume of Recent Developments in Alcoholism contains the latest information on the field of alcoholism treatment research. This scholarly volume includes comprehensive reviews of the methodologies available to evaluate treatment outcome, state-of-the art psychosocial interventions, and recent advances in pharmacological adjuncts to treatment that are currently available and those on the brink of application. Other sections of the book address special issues in the treatment of alcohol dependence, including the treatment of the adolescents and other unique populations, the management of tobacco dependence, and the role of spirituality in recovery, among others. The clinician will find these reviews an important resource for learning about evidence based treatments for alcoholism, and the researcher will find the synthesis of recent developments informative and forward looking. The research agenda for the future rests soundly on the progress to date and additional advances in the treatment of alcoholism can be predicted in the near future. Stephanie O'Malley, Ph. D. President, Research Society on Alcoholism xi Preface From the President of the American Society of Addiction Medicine This excellent volume presents investigations covering a wide spectrum of scientific issues. It is also evident that many of these articles have clinical significance, ranging from assessments of disorder, monitoring clinical progress, and behavioral and pharmacological interventions.

Alcohol and Alcoholism John H. Hannigan, Linda P. Spear, Norman E. Spear, Charles R. Goodlett, 1999-02-01 This is the first volume that focuses on the lifespan neurobehavioral factors likely to determine susceptibility to alcohol abuse and its consequences. The chapters offer careful analysis of the effects of ethanol on the fetus, the infant, the adolescent, and the adult. The authors include behavioral neuroscientists and clinical neuropsychologists. Their topics range from the neurochemical and neuroanatomical consequences of prenatal alcohol to the cognitive consequences of prenatal alcohol on preschool and school-age children. The impact of genetics on sensitivity to alcohol is considered in terms of analytic tests using techniques of behavioral genetics and molecular biology. The consequences of exposure to alcohol during breastfeeding are described in experiments with human infants. The alcoholism that develops in adulthood is analyzed through the experimental study of relapse from alcohol deprivation and assessment of neuropsychological impairments and treatment for alcoholics. Drawing on extensive research that has applied techniques from molecular neurobiology and tests of learning and memory to the clinical assessment and treatment of alcoholics. The volume answers recent questions raised by the National Institute of Alcohol Abuse and Alcoholism and the National Institute of Drug Abuse about the role of early experience in susceptibility to later abuse of alcohol and other drugs. Although epidemiological studies can describe the problem, solutions in terms of mechanisms that mediate these effects will be found only with the kinds of experimentally oriented approaches the chapter authors describe.

The Genetics of Alcoholism Henri Begleiter, Benjamin Kissin, 1995 This volume provides an in-depth look at the genetic influences that contribute to the development of alcoholism. Part I: Epidemiologic Studies contains five chapters that examine the various approaches employed in the study of the genetics of alcoholism. It provides a historical perspective and details all the essentials of this subject. Part II: Selective Breeding Studies highlights the results of research involving the selective breeding of rodents. This type of research has produced homogenous strains exhibiting specific behavioral responses considered significant in the development and maintenance of alcohol dependence. The studies presented in Part III: Phenotypic Studies investigate and analyze phenotypic markers that serve as correlates to the genotypic determinants of alcoholism. Through its broad scope, this volume provides for the first time a panoramic view of the knowledge available on the hereditary influences of alcoholism.

Innovations in Alcoholism Treatment Gerard Joseph Connors, 1993 This book helps busy professionals stay abreast of the vast amount of diverse yet related research being conducted in the field of alcoholism. *Innovations in Alcoholism Treatment* reviews and integrates a variety of contemporary topics to help professionals understand the nature of alcohol use disorders and to develop strategies for identification and treatment. Each chapter contains a summary and synthesis of current research as well as commentaries on clinical and research implications. Directions for future research are also indicated. Together, the chapters illuminate where the field

has been, where it is now, and where it may be heading in terms of important clinical research issues. Authors provide state-of-the-art reviews and perspectives on important current areas of research in the field of alcoholism. Some of the topics they cover are: early identification of alcohol problems biological indicators of alcohol problems modern disease models of substance abuse sociocultural aspects of alcohol abuse, specifically ethnicity and gender drinking moderation strategies Authors not only identify shortcomings in present knowledge and methodologies but also emphasize the numerous advances that are occurring throughout the field. This balanced, enlightening book helps readers catch up on current work in the field. *Innovations in Alcoholism Treatment* is of interest to instructors teaching courses on alcohol problems and to counselors in the substance use field.

WHO Expert Committee on Problems Related to Alcohol Consumption WHO Expert Committee on Problems Related to Alcohol Consumption, World Health Organization, 2007-09-19 Since the last meeting of the WHO Expert Committee on Problems Related to Alcohol Consumption WHO has undertaken a range of major initiatives to support Member States and reinforce the evidence on which policies work to develop global and regional information systems and to promote effective policies in health-care settings. These initiatives provide the background for the continuing role of WHO in supporting Member States to reduce the harm done by alcohol. In resolution WHA58.26 the Fifty-eighth World Health Assembly in 2005 requested the Director-General to report to the Sixtieth World Health Assembly on evidence-based strategies and interventions to reduce alcohol-related harm including a comprehensive assessment of public-health problems caused by harmful use of alcohol and to draw up recommendations for effective policies and interventions to reduce alcohol-related harm. To this end a WHO Expert Committee on Problems Related to Alcohol Consumption was convened with the main objectives of reviewing a range of public health problems attributable to alcohol consumption as well as scientific and empirical evidence of effectiveness of different policy options and providing technical recommendations on effective policies and interventions to reduce alcohol-related harm.

Types of Alcoholics Thomas F. Babor, Thomas Babor, 1994 This volume, containing 16 papers, explores recent research and current theory pertaining to alcoholic typologies, giving special emphasis to genetic susceptibility and biological markers of clinical subtypes. This treatment is timely in view of recent trends in genetic epidemiology, treatment matching, and biological markers for alcoholism. The papers present recent research findings, explore commonalities across diverse theoretical and methodological approaches, and consider implications for diagnosis and treatment.
