**Algebra for the Urban Student** Canaa Lee, 2012-05-15 Algebra for the Urban Student offers an algebra textbook for the typical math student. In many cases, such textbooks are written for people who love mathematics and understand the jargon. Teacher Canaa Lee has incorporated her personal experiences as a high school mathematics teacher into a textbook that is specially geared toward students' needs. Most students dislike mathematics because the subject has always been difficult for them to master. With this in mind, Algebra for the Urban Student builds on methods Lee has used successfully in her classroom to motivate her students to a better, more practical understanding of math. When students need to learn math concepts, they can turn to a clearly written, easy-to-use guide to help them complete their assignments. Each chapter in Algebra for the Urban Student illustrates a significant algebra concept, such as solving linear equations and inequalities or finding the slope of a line. The chapters also include homework assignments that provide students with the opportunity to demonstrate their understanding of the concept explained in that chapter. In addition, there are real-world projects for both algebra and geometry and guides for whole and small class discussions. Algebra for the Urban Student insures that every student has the information they need to succeed at mathematics.

*Beary Fun Basic Algebra Practice Workbook (With Answers)* Bearlyn, 2012-12-01 **CONCEPT:** This algebra workbook has a creative twist: A picture of a Cuddly Bear is used in place of a boring old X for the unknown. The idea behind adding this artistic touch to the equations is to help make algebra seem a little more fun and enjoyable. Students don't need to draw bears in their solutions, though - they can write X if they want. However, there is an opportunity for students to be creative - for example, they could draw smiley faces instead of X's. **INSTRUCTION:** The staff at Al-Bear Einstein developed a concise, one-page introduction to each chapter that explains what to do in simple terms and provides an instructive example to serve as a guide. The description emphasizes the underlying concept, like dividing both sides by the same number. The material is presented in stages: A new technique is introduced in each stage, allowing students to focus on and master one idea at a time. Review sections help to reinforce the older material and force students to learn when to apply the various techniques. The Cuddly Bears drawn by artist Bearlyn help to engage student interest and make the learning process fun. **STRUCTURE:** This workbook offers plenty of practice applying basic algebra skills to solve equations. The problems start out simple, like  $X + 4 = 12$ , and progressively advance, culminating in equations like  $3X + 8 = 9X - 16$  (but with Cuddly Bears instead of X's). The problems are written in a large font. **ANSWERS:** Teachers or parents can check the answers at the end of the workbook. **LEVEL:** This workbook focuses on basic algebra skills. No prior experience with algebra is needed. The goal is to learn how to solve for one unknown in a linear equation using basic arithmetic operations. All of the answers are positive integers. There are no fractions. All of the problems can be solved without a calculator with elementary arithmetic with the numbers 1 thru 9. This way, students can focus on the main idea without distracting complications. **CONTENTS:** The stages of this workbook are presented as follows: This workbook begins with simple equations that can be solved with a single arithmetic operation, like adding a

constant to both sides. Each of the first four sections focuses on a different operation. This allows students to master one technique at a time. A review section mixes the four operations together. The next section combines operations together. For example, it may be necessary to first subtract a number from both sides and then divide both sides by a number. Students next learn how to add the unknown to both sides of the equation in order to solve the problem. The last section offers ample practice with equations of the form  $3X + 8 = 23 - 2X$ . Students must add or subtract both constants and unknowns to/from both sides of the equation in order to solve these problems.
