Information Economy Report 2015 United Nations Conference on Trade and Development (UNCTAD),2015-06-19 Electronic commerce (e-commerce) is rapidly transforming the way in which enterprises are interacting among each other as well as with consumers and governments. Despite important potential benefits, businesses and consumers in developing countries were for a long time slow to exploit e-commerce. As a result of changes in the evolving landscape for information and communications technologies (ICTs), this pattern is now changing, and e-commerce is growing rapidly in emerging markets and developing economies. Against this background, this publication revisits the potential opportunities and risks of e-commerce and examines how countries can benefit the most from the phenomenon in today's Information Society. Using official statistics and private sector data, it provides an up-to-date review of global and regional trends related to e-commerce in view of changes in the ICT landscape, focusing on developing countries while drawing lessons from developed countries.

The Golden Tap - The Inside Story of Hyper-Funded Indian Start-Ups Kashyap Deorah,2015-11-16 Ever wondered why global investors are willing to write million dollar cheques to young and inexperienced entrepreneurs? Why companies are no longer judged on their ability to make profits? Why the valuation of a startup can dwarf that of its well-established counterpart? Is it a bubble? Or have the rules of the game changed? Can these hyper-funded; technology driven companies become global superpowers? Or is it an unsustainable phenomenon? The Golden Tap gives you the answers. In a remarkably honest, no holds barred account; Kashyap - himself a serial entrepreneur - demystifies the technology ecosystem that exists in India today. From the origins of Amazon and Google, to the remarkable growth of Flipkart and Ola, he meticulously plots and chronicles a connected global sequence of events. Set in this background he recounts his personal roller coaster of a life.A story filled with ambition, greed, vanity, fear and success that all young entrepreneurs can relate to. Is this the business model of the future? Or merely a game of poker played by master investors? The answers pour out of The Golden Tap.

The Digitalisation of African Agriculture Report 2018-2019 Tsan, Michael,Totapally, Swetha,Hailu, Michael,Addom, Benjamin K.,2019-06-30 An inclusive, digitally-enabled agricultural transformation could help achieve meaningful livelihood improvements for Africa's smallholder farmers and pastoralists. It could drive greater engagement in agriculture from women and youth and create employment opportunities along the value chain. At CTA we staked a claim on this power of digitalisation to more systematically transform agriculture early on. Digitalisation, focusing on not individual ICTs but the application of these technologies to entire value chains, is a theme that cuts across all of our work. In youth entrepreneurship, we are fostering a new breed of young ICT 'agripreneurs'. In climate-smart agriculture multiple projects provide information that can help towards building resilience for smallholder farmers. And in women empowerment we are supporting digital platforms to drive greater inclusion for women entrepreneurs in agricultural value chains.

Chinese Politics as Fragmented Authoritarianism Kjeld Erik Brødsgaard,2016-10-04 This book explores how far the concept of fragmented authoritarianism remains valid as the key concept for understanding how the Chinese political process works. It contrasts fragmented authoritarianism, which places bureaucratic bargaining at the centre of policy-making, arguing that the goals and interests of the implementing agencies have to be incorporated into a policy if implementation is to be secured, with other characterisations of China's political process. Individual chapters consider fragmented authoritarianism at work in a range of key policy areas, including energy issues, climate change and environmental management, financial reform, and civil-military relations. The book also explores policy making at the national, provincial, city and local levels; debates how far the model of fragmented authoritarianism is valid in its current form or whether modifications are needed; and discusses whether the system of policy making and implementation is overcomplicated, unwieldy and ineffective or whether it is constructive in enabling widespread consultation and scope for imagination, flexibility and variation.

Security Engineering Ross Anderson,2020-11-25 Now that there's software in everything, how can you make anything secure? Understand how to engineer dependable systems with this newly updated classic In Security Engineering: A Guide to Building Dependable Distributed Systems, Third Edition Cambridge University professor Ross Anderson updates his classic textbook and teaches readers how to design, implement, and test systems to withstand both error and attack. This book became a best-seller in 2001 and

helped establish the discipline of security engineering. By the second edition in 2008, underground dark markets had let the bad guys specialize and scale up; attacks were increasingly on users rather than on technology. The book repeated its success by showing how security engineers can focus on usability. Now the third edition brings it up to date for 2020. As people now go online from phones more than laptops, most servers are in the cloud, online advertising drives the Internet and social networks have taken over much human interaction, many patterns of crime and abuse are the same, but the methods have evolved. Ross Anderson explores what security engineering means in 2020, including: How the basic elements of cryptography, protocols, and access control translate to the new world of phones, cloud services, social media and the Internet of Things Who the attackers are – from nation states and business competitors through criminal gangs to stalkers and playground bullies What they do – from phishing and carding through SIM swapping and software exploits to DDoS and fake news Security psychology, from privacy through ease-of-use to deception The economics of security and dependability – why companies build vulnerable systems and governments look the other way How dozens of industries went online – well or badly How to manage security and safety engineering in a world of agile development – from reliability engineering to DevSecOps The third edition of Security Engineering ends with a grand challenge: sustainable security. As we build ever more software and connectivity into safety-critical durable goods like cars and medical devices, how do we design systems we can maintain and defend for decades? Or will everything in the world need monthly software upgrades, and become unsafe once they stop?
