

Allinson Vibrate 10

Robert E. Allinson

Saving Human Lives Robert E. Allinson, 2006-05-20 This is a pioneering work. Recent disasters such as the tsunami disaster continue to demonstrate Professor Allinson's thesis that valuing human lives is the core of ethical management. His unique comparison of the ideas of the power of Fate and High Technology, his penetrating analysis of the very concept of an accident, demonstrate how concepts rule our lives. His wide-ranging investigation of court cases and government documents from the seventeenth through the twentieth centuries, and from places as diverse as the USA, UK and New Zealand provide ample supporting evidence for the universality and the power of explanation of his thesis. *Saving Human Lives* will have an impact beyond measurement on the field of management ethics.

Artificial Intelligence: Methodology, Systems, and Applications

Darina Dicheva, 2010-08-19 This book constitutes the refereed proceedings of the 14th International Conference on Artificial Intelligence: Methodology, Systems, and Applications, AIMSA

2010, held in Varna, Bulgaria in September 2010. The 26 revised full papers presented together with the 13 posters were carefully reviewed and selected from 93 submissions. The papers are organized in topical sections on knowledge representation and reasoning; intelligent techniques for adaption, personalization, and recommendation; constraints and search; machine learning, data mining, and information retrieval; AI in education; applications.

Riot Control Agents Eugene J. Olajos, Woodhall Stopford M.D., 2004-01-27 The proliferation and sophistication of riot control chemicals mean that all parties need to understand the responsible use and effects of such compounds. This book provides practical information on the history, chemistry, and biology of riot control

agents and discusses their biological actions, risk assessment issues, and recent technical develop

Spectroscopic Properties of Inorganic and Organometallic Compounds E A V Ebsworth,2007-10-31 Spectroscopic Properties of Inorganic and Organometallic Compounds provides a unique source of information on an important area of chemistry. Divided into sections mainly according to the particular spectroscopic technique used, coverage in each volume includes: NMR (with

reference to stereochemistry, dynamic systems, paramagnetic complexes, solid state NMR and Groups 13-18); nuclear quadrupole resonance spectroscopy; vibrational spectroscopy of main group and transition element compounds and coordinated ligands; and electron diffraction. Reflecting the growing volume of published work in this field, researchers will find this Specialist Periodical Report an invaluable source of information on current methods and applications. Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research. Compiled by teams of leading experts in their specialist fields, this series is designed to help the chemistry community keep current with the latest developments in their field. Each volume in the series is published either annually or biennially and is a superb reference point for researchers. www.rsc.org/spr
