The New Joyce Studies Catherine Flynn,2022-09-08 The New Joyce Studies indicates the variety and energy of research on James Joyce since the year 2000. Essays examine Joyce's works and their reception in the light of a larger set of concerns: a diverse international terrain of scholarly modes and methodologies, an imperilled environment, and crises of racial justice, to name just a few. This is a Joyce studies that dissolves early visions of Joyce as a sui generis genius by reconstructing his

indebtedness to specific literary communities. It models ways of integrating masses of compositional and publication details with literary and historical events. It develops hybrid critical approaches from posthuman, medical, and queer methodologies. It analyzes the nature and consequences of its extension from Ireland to mainland Europe, and to Africa and Latin America. Examining issues of copyright law, translation, and the history of literary institutions, this volume seeks to use Joyce's canonical centrality to inform modernist studies more broadly.

IBM TS7700 Release 3.3 Larry Coyne,Robert Beiderbeck,Katja Deneffleh,Joe Hew,Sosuke Matsui,Aderson Pacini,Markus Schäfer,Michael Scott,Chen Zhu,IBM Redbooks,2017-04-11 Note: The IBM TS7700 Release 4.0 Guide, SG24-8366 is available at:

<http://www.redbooks.ibm.com/abstracts/sg248366.html> IBM® TS7700 is a family of mainframe virtual tape solutions that optimize data protection and business continuance for IBM z Systems™ data. Through the use of virtualization and disk cache, the TS7700 family operates at disk speeds while maintaining compatibility with existing tape operations. Its fully integrated tiered storage hierarchy takes advantage of both disk and tape technologies to deliver performance for active data and best economics for inactive and archive data. This IBM Redbooks® publication describes the TS7700 R3.3 architecture, planning, migration, implementation, and operations. The latest TS7700 family of z Systems tape virtualization is offered as two models: IBM TS7720 features encryption-capable high-capacity cache that uses 3 TB SAS disk drives with RAID 6, which can scale to large capacities with the highest level of data protection. IBM TS7740 features encryption-capable 600 GB SAS drives with

RAID 6 protection. Both models write data by policy to physical tape through attachment to high-capacity, high-performance IBM TS1150 and earlier IBM 3592 model tape drives that are installed in IBM TS3500 tape libraries. Physical tape support is optional on TS7720. TS7700 R3.3 also supports external key management for disk-based encryption by using IBM Security Key Lifecycle Manager. This book intended for system architects who want to integrate their storage systems for smoother operation.
