Biblical Genesis - A new light on the origins of man and the original sin Don Guido

Bortoluzzi,Renza Giacobbi,2017-02-02 Fr. Guido Bortoluzzi was born in 1907 and died in 1991 in the province of Belluno (N.E. Italy). Between 1968 and 1974 he received from the Lord eight revelations which concerned the origins of the Earth and of Man. He was a man without malice, and because of this it was granted him to see episodes that would normally make one feel awkward, if not embarrassed, but thanks to Fr. Guido's candour, they are related without trace of morbidity. This inner attitude of Fr. Guido permitted the Lord to deal with difficult subjects frankly and without circumlocutions. As is the way with the Lord, He chose as His witness a candid, unprejudiced soul, whose heart trusted in God's Love. The contrast between the simplicity of the 'means' and the greatness of the message makes it evident that the source of the contents cannot be but from God. The Lord chose neither a theologian, nor a scientist, because - as it is written in the Gospel - it is not possible to put new wine in old wineskins (i.e. in someone who is already self-sufficient and content with his own theories) without both of them being lost.

The Disappearing Spoon Sam Kean, 2018-04-03 A young readers edition of the New York Times bestseller The Disappearing Spoon, chronicling the extraordinary stories behind one of the greatest scientific tools in existence: the periodic table. Why did Gandhi hate iodine (I, 53)? How did radium (Ra, 88) nearly ruin Marie Curie's reputation? And why did tellurium (Te, 52) lead to the most bizarre gold rush in history? The periodic table is a crowning scientific achievement, but it's also a treasure trove of adventure, greed, betrayal, and obsession. The fascinating tales in The Disappearing Spoon follow elements on the table as they play out their parts in human history, finance, mythology, conflict, the arts, medicine, and the lives of the (frequently) mad scientists who discovered them. Adapted for a middle grade audience, the young readers edition of The Disappearing Spoon offers the material in a simple, easy-to-follow format, with approximately 20 line drawings and sidebars throughout. Students, teachers, and burgeoning science buffs will love learning about the history behind the chemistry.

J.W. McConnell William Fong, 2008 J.W. McConnell (1877-1963), born to a poor farming family in Ontario, became one of the wealthiest and most powerful businessmen of his generation - in Canada and internationally. Early in his career McConnell established the Montreal office of the Standard Chemical Company and began selling bonds and shares in both North America and Europe, establishing relationships that would lead to his enormous financial success. He was involved in numerous businesses, from tramways to ladies' fashion to mining, and served on the boards of several corporations. For nearly fifty years he was president of St Laurence Sugar and late in life he became the owner and publisher of the Montreal Star. McConnell was an indefatigable and formidable fundraiser for the YMCA, the war effort of 1914/18, hospitals, and McGill University, where he served as governor for almost three decades. In 1937 he established what would become The J.W. McConnell Family Foundation, the first major foundation in Canada and still one of the best endowed. J.W. McConnell was a principled and brilliant visionary with a strong work ethic and a deep commitment to the public good, a Rockefellerian figure in both big business and high society who quietly became one of the greatest philanthropists of his time. His life story - told in uncompromising detail by William Fong - is a study of raising, spending, and giving away money on the grandest scale.

Decades Never Start on Time Michael Temple, Karen Smolens, 2019-07-25 Richard Roud, film writer and co-founder and director of the New York Film Festival, was one of the most influential film critics of the twentieth century. Renowned for his close relationships with French New Wave directors such as Godard and Truffaut, he played a key role in bringing European art cinema to the attention of American and British audiences. This

anthology brings together selected writings from his published works with previously unpublished archival material – from an unfinished study of Truffaut, to extracts from his books on film-makers such as Straub-Huillet and Ophüls, and articles for The Guardian and Sight & Sound. Charting Roud's journey through the world of film festivals and film criticism from the 1950s to the 1980s, *Decades Never Start on Time* provides a fascinating insight into the flourishing film culture of the era. With a preface by David Thomson.

Structural Biology Using Electrons and X-rays Michael F Moody, 2011-03-03 *Structural Biology Using Electrons and X-Rays* discusses the diffraction and image-based methods used for the determination of complex biological macromolecules. The book focuses on the Fourier transform theory, which is a mathematical function that is computed to transform signals between time and frequency domain. Composed of five parts, the book examines the development of nuclear magnetic resonance (NMR), which allows the calculation of the images of a certain protein. Parts 1 to 4 provide the basic information and the applications of Fourier transforms, as well as the different methods used for image processing using X-

ray crystallography and the analysis of electron micrographs. Part 5 focuses entirely on the mathematical aspect of Fourier transforms. In addition, the book examines detailed structural analyses of a specimen's symmetry (i.e., crystals, helices, polyhedral viruses and asymmetrical particles). This book is intended for the biologist or biochemist who is interested in different methods and techniques for calculating the images of proteins using nuclear magnetic resonance (NMR). It is also suitable for readers without a background in physical chemistry or mathematics. Emphasis on common principles underlying all diffraction-based methods Thorough grounding in theory requires understanding of only simple algebra Visual representations and explanations of challenging content Mathematical detail offered in short-course form to parallel the text

On the Likely Origin of Species Xavier L. Suarez, 2013-01-10 Einstein once famously proclaimed: Make things as simple as you possibly can, but no simpler. This book is an attempt to do precisely that, and in the process to take lay readers on a voyage all the way from the Big Bang to the human species. In doing so, it avoids both the simplistic neo-Darwinian idea that everything happens by pure chance and the unscientific notion that if we want to know how our universe came to be, all we have to do is read our bibles. Suarez presents here a rigorous and also entertaining description of life from the moment (approximately 13.7 billion years ago) when total darkness gave way to blinding light, and from there all the way to the present. It tackles the mystery of biogenesis - that is to say

the moment when chemicals, which did not seem predisposed to arrange themselves into something more complex, somehow overcame the tendency to break apart and instead combined into something as harmonious and perfectly synchronized as a living cell. In between the singularity that marked the beginning of all matter and the wondrous complexity of the human mind, the author tackles the inflationary moment, Dark Energy, the Second Law, biogenesis and the so-called missing link, using analogies, stories, and quotes from history's great thinkers. The book does not solve the four mysteries of natural history, but it provides the reader insights by which to weigh to what extent modern science has solved them and to what extent they remain scientific voids that beg for a metaphysical explanation. At the very end, a theory is put forth that connects two of science's four great mysteries. If true, the philosophical implications are so startling that it makes reading the book worthwhile just to ponder the possibility that Suarez may be right about that connection.
