**Open Banking** Francesco De Pascalis, Alan Brener, 2024-05-01 Open banking ends the proprietary control of customer information by banks and allows customers to share their banking financial data with third parties as a matter of right. It can also permit customers to allow others to remove funds directly from their bank accounts in return for goods and services. All of this is done securely with standardised 'application programming interfaces' (APIs). Open banking has developed in different ways and with different objectives across the globe. Open Banking: Global Development and Regulation examines the empowering and enabling regulations that facilitate all of this. This book compares a number of different open banking national strategies. These range from the focus of the UK and EU on enhanced competition to the more collaborative approaches in many East Asian jurisdictions. It also looks at the use of open banking for socio-economic purpose in Brazil and India. Here open banking forms part of a wider government programme to increase financial inclusion coupled with encouraging economic growth. This text will be valuable for fintech companies, policymakers and financial services regulators. Its overarching aim is to demonstrate the possibilities and challenges of open banking and how it is changing lives across the world.

HC 204 - Conduct and Competition in SME Lending Great Britain. Parliament. House of Commons. Treasury Committee, 2015-03-16 Small and medium sized enterprises (SMEs) form a large part of the UK economy. According to official statistics, there were 5.243 million private sector businesses at the start of 2014. 5.236 million had 0-250 employees and are classed as SMEs, of which 5.204 million had fewer than 50 employees and are classed as small businesses. SMEs account for 60 per cent of all private sector employment, and registered an annual turnover of £1.6 trillion at the start of 2014-47 per cent of the private sector total. A large majority of SMEs are sole traders-76% of all businesses are non-employers. The Government believes that access to finance for SMEs is 'key to the recovery and long term growth of the economy'. Research by National Endowment for Science, Technology and the Arts (NESTA) in 2009 found that the '6 per cent of UK businesses generated half of the new jobs created by existing businesses between 2002 and 2008. This report offers a number conclusions and recommendations covering: the state of the SME lending market; RBS Global Restructuring Group (GRG); mis-sale of Hedging Products; and alternative finance

Finance in Africa European Investment Bank, 2022-10-24 Banks in Africa are weathering the COVID-19 pandemic well and showing a lot of creativity to overcome the crisis's problems. But the war in Ukraine is causing new concerns. With interest rates rising in many countries and bond funding becoming more expensive, a significant number of banks are worried about rising financing costs. These issues and more are covered in the new Finance in Africa report, based on an annual survey of banks across the continent and supported by Making Finance Work for Africa, an initiative helping more people get loans across the continent. We surveyed 70 banks in sub-Saharan Africa from April to June in 2022 to find out if the war is hurting their business and to learn their views on climate lending, access to finance for women and the accelerating digitisation of the financial sector.

Pimple Ryan Weeks, 2018-04-04 Annie O'Mahony, the disillusioned former founder of a "FinTech" (financial technology) business, is a tech evangelist. Having seen her last firm, Millennial Credit, taken over by a high street bank, she's looking for a fresh challenge: an industry where technology can be the cure-all. She lands, quite unexpectedly, on the sex trade. With the help of her closest friend Veronica, Annie sets about building an Uber for prostitution – an app she names Pimple. As her story progresses, and the app's user-base begins to swell, dangerous syndicates of pimps begin to push back against it, in what quickly morphs into a violent struggle between the old and the new. The police wrestle with the righteousness of the app's rise to prominence, while its founders are soon forced to contend with the morality of what they've created. Pimple is the fictitious tale of the rise of this technology, and of the inevitable disruption that it brings about

**Financial Feminism** Jessica Robinson, 2021-02-04 As we face global challenges like climate change and inequality, what if women could use their investments to build a cleaner, fairer and more sustainable world? Financial feminism – the belief in the financial equality of women – has been gathering momentum, largely in the context of the gender pay gap: on average a woman earns 80% of what a man does. But there's another gap – the gender investing gap – which shows women are investing less than men, saving less for retirement and parking more in cash. When compounded by the gender pay gap, this results in a significant shortfall, but there's more to financial feminism than simply addressing these gaps: women also care about where their money is invested and the impact it can have. In this practical and accessible guide, sustainable investing expert Jessica Robinson shows how through financial feminism, women can use their financial power to invest in a sustainable future and build the kind of world they want to live in. With jargon-free explanations and real-world examples, she demystifies the financial services industry, breaks down just what sustainable investing is and demonstrates the societal and environmental impact of the investment decisions we make. Arming women with the information they need to get started – and keep going – she hopes that more women will embrace financial feminism, invest to grow their own wealth and, in doing so, use their financial decisions to demand a better world.

**Intelligent Money** Chris Skinner,2024-03-01 WHO cares about the money of the future? WHY should I care about money of the future? This book explains and shows that, by 2030, as money becomes digital, it will revolutionise everything. Digital money will make money personal; individualise currency and its usage; secure it; enable it to automatically grow to meet our personal goals; manage risk automatically; and make life simpler and easier for all. The most critical aspect of this book is HOW money becomes intelligent ... digitally ... and artificially. For over ten years, liberterians have said that bitcoin will be the currency of Planet Earth. Chris Skinner has always argued that you cannot have money without government. Who is right? For over ten years, libertarians have accused people like Chris of being a Statist – someone who support national government states in implementing law – and saying he is wrong. What they didn't ask is: who is the government? Is the government the State or the network? This issue has been at the heart of a debate for over ten years, and may finally be coming to some resolution thanks to the collapse of FTX, Celsius, ThreeArrows, Terra-Luna and many other cryptocurrency market trading platforms in the last years. The core of this argument is what is the future of money. Is it decentralised or centralised. Is it DeFi – decentralised finance – or CeFi – centralised finance? This book argues that it's HyFi or, in other words, hybrid finance. The future of money requires regulatory oversight but can operate in a decentralised form. Why? Because if you lose all of your money to a decentralised exchange, platform or currency, there needs to be a way to get it back.

**Managing Smart Cities** Anna Visvizi,Orlando Troisi,2022-02-01 This book adopts the managerial perspective to the study of smart cities. As such, this book is a necessary addition to the existing body of literature on smart cities. The chapters included in this book prove the case that transformation of cities to smart cities is a function of effective and efficient management practices implemented at diverse levels of smart cities. While advances in information and communication technology (ICT) are crucial, it is the ability to apply ICT consciously and efficiently that drives the transformation of cities to smart cities in a manner conducive to cities' sustainability and resilience. The book covers three sets of interconnected topics: Management and decision-making for urban design and infrastructure development Management and decision-making in context of smart cities development Ways of promoting and ensuring participation, representation and co-creation in smart cities These three groups of topics offer a great opportunity to acquire a clear, direct, and practice-driven knowledge and understanding of how effective management allows ICT-enhanced tools and applications to change smart cities, possibly making them smarter.

**Monetary Policy Normalization** Paolo Savona,Rainer Stefano Masera,2023-08-18 In light of the pickup of inflation at the end of 2021 and monetary policy shifts by the world's major central banks, this book examines interrelated issues in the normalization of monetary policy. It covers topics including the role of technological innovations such as derivatives and cryptocurrencies in monetary and financial management, the role of monetary policy in financial crises (especially public debt), and the major repricing needed for central banks and the global economy. In addition, the book discusses the problem of how flexible money should be and the importance of predictive tools for these decisions, with attention to the advances of languages for scientific research, including those on the workings of the economy. The work addresses the geopolitical and social challenges that have arisen as a result of the invasiveness of monetary policy in its various manifestations in the context of major leading currencies. It is aimed at scholars and students of monetary and financial economics.

**Super Founders** Ali Tamaseb,2021-05-18 Super Founders uses a data-driven approach to understand what really differentiates billion-dollar startups from the rest—revealing that nearly everything we thought was true about them is false! Ali Tamaseb has spent thousands of hours manually amassing what may be the largest dataset ever collected on startups, comparing billion-dollar startups with those that failed to become one—30,000 data points on nearly every factor: number of competitors, market size, the founder's age, his or her university's ranking, quality of investors, fundraising time, and many, many more. And what he found looked far different than expected. Just to mention a few: Most unicorn founders had no industry experience; There's no disadvantage to being a solo founder or to being a non-technical CEO; Less than 15% went through any kind of accelerator program; Over half had strong competitors when starting--being first to market with an idea does not actually matter. You will also hear the stories of the early days of billion-dollar startups first-hand. The book includes exclusive interviews with the founders/investors of Zoom, Instacart, PayPal, Nest, Github, Flatiron Health, Kite Pharma, Facebook, Stripe, Airbnb, YouTube, LinkedIn, Lyft, DoorDash, Coinbase, and Square, venture capital investors like Elad Gil, Peter Thiel, Alfred Lin from Sequoia Capital and Keith Rabois of Founders Fund, as well as previously untold stories about the early days of ByteDance (TikTok), WhatsApp, Dropbox, Discord, DiDi, Flipkart, Instagram, Careem, Peloton, and SpaceX. Packed with counterintuitive insights and inside stories from people who have built massively successful companies, Super Founders is a paradigm-shifting and actionable guide for entrepreneurs, investors, and anyone interested in what makes a startup successful.

**After the Crash** Sharyn O'Halloran,Thomas Groll,2019-10-08 The 2008 crash was the worst financial crisis and the most severe economic downturn since the Great Depression. It triggered a complete overhaul of the global regulatory environment, ushering in a stream of new rules and laws to combat the perceived weakness of the financial system. While the global economy came back from the brink, the continuing effects of the crisis include increasing economic inequality and political polarization. After the Crash is an innovative analysis of the crisis and its ongoing influence on the global regulatory, financial, and political landscape, with timely discussions of the key issues for our economic future. It brings together a range of experts and practitioners, including Joseph Stiglitz, a Nobel Prize winner; former congressman Barney Frank; former treasury secretary Jacob Lew; Paul Tucker, a former deputy governor of the Bank of England; and Steve Cutler, general counsel of JP Morgan Chase during the financial crisis. Each poses crucial questions: What were the origins of the crisis? How effective were international and domestic regulatory responses? Have we addressed the roots of the crisis through reform and regulation? Are our financial systems and the global economy better able to withstand another crash? After the Crash is vital reading as both a

retrospective on the last crisis and an analysis of possible sources of the next one.

**Deliver What You Promise** Bali Padda,2022-09-01 Bali Padda is the operations maverick behind LEGO's remarkable transformation from a business basket-case, struggling to deliver on its orders, into the biggest and most profitable toy company in the world. As Chief Operations Officer at LEGO, Bali overhauled the company by shaking up its operations and instilling essential business fundamentals. He resolved issues across the supply chain and forged close partnerships between functions. He cut unpopular product lines and diverted the company's attention to hero items. He developed a relentless focus on customer service - of delivering what was promised - and he instituted weekly performance briefings known as the Visual Factory, which ultimately spread throughout the whole organization and transformed culture and performance. LEGO became the largest toy manufacturer in the world, and Bali was honoured with becoming the company's first non-Danish CEO in 2017. In Deliver What You Promise, Bali distils his methodology at LEGO into ten essential, fundamental lessons. From how to reduce complexity to why prize reliability over agility. Why a business should be treating like a living organism and how to bring everyone together under a shared sense of purpose. On when to use soft and hard managerial skills and the hidden risks of success. Illustrated by insider stories from LEGO, these are enduring principles that both young starters and established leaders alike need to know and can implement straight away, to deliver on what is promised.

**Financial Social Innovations** Alessandro Lanteri,2024-03-15 This book helps make sense of the emerging and established social innovations that have disrupted and are disrupting the world of finance. Written in an engaging style, this book offers a systematic study of social innovation in the financial services. It introduces the fundamental concepts of financial social innovations (FINSIs), places them in the context of the broader literature, and provides a new framework for understanding and organising these innovations. The book applies the framework to seven existing FINSIs to illustrate their important components and explore their benefits as well as the more negative or harmful aspects to society. These seven FINSIs are microfinance, peer-to-peer (P2P) lending, crowdfunding, mobile banking, impact investing, digital cryptocurrencies, and social impact bonds. The easy-to-follow framework will help to ground the reader’s understanding of FINSIs as the existing ones evolve and new ones are developed. This book is ideal for courses on social innovation, social entrepreneurship, and financial innovation in departments of business, economics, social sciences, and political science.

Emerging Technology and the Law of the Sea James Kraska,Young-Kil Park,2022-07-21 Autonomous vessels and robotics, artificial Intelligence and cybersecurity are transforming international shipping and naval operations. Likewise, blockchain offers new efficiencies for compliance with international shipping records, while renewable energy from currents and waves and offshore nuclear power stations open opportunities for new sources of power within and from the sea. These and other emerging technologies pose a challenge for the governance framework of the law of the sea, which is adapting to accommodate the accelerating rates of global change. This volume examines how the latest technological advances and marine sciences are reshaping the interpretation and application of the law of the sea. The authors explore the legality of new concepts for military operations on the continental shelf, suggest remote sensing methodologies for delimitation of maritime boundaries, and offer a legal roadmap for ensuring maritime cyber security.

**Fintech, Small Business & the American Dream** Karen G. Mills,2019-03-12 Small businesses are the backbone of the U.S. economy. They are the biggest job creators and offer a path to the American Dream. But for many, it is difficult to get the capital they need to operate and succeed. In the Great Recession, access to capital for small businesses froze, and in the aftermath, many community banks shuttered their doors and other lenders that had weathered the storm turned to more profitable avenues. For years after the financial crisis, the outlook for many small businesses was bleak. But then a new dawn of financial technology, or “fintech,” emerged. Beginning in 2010, new fintech entrepreneurs recognized the gaps in the small business lending market and revolutionized the customer experience for small business owners. Instead of Xeroxing a pile of paperwork and waiting weeks for an answer, small businesses filled out applications online and heard back within hours, sometimes even minutes. Banks scrambled to catch up. Technology companies like Amazon, PayPal, and Square entered the market, and new possibilities for even more transformative products and services began to appear. In Fintech, Small Business & the American Dream, former U.S. Small Business Administrator and Senior Fellow at Harvard Business School, Karen G. Mills, focuses on the needs of small businesses for capital and how technology will transform the small business lending market. This is a market that has been plagued by frictions: it is hard for a lender to figure out which small businesses are creditworthy, and borrowers often don’t know how much money or what kind of loan they need. New streams of data have the power to illuminate the opaque nature of a small business’s finances, making it easier for them to weather bumpy cash flows and providing more transparency to potential lenders. Mills charts how fintech has changed and will continue to change small business lending, and how financial innovation and wise regulation can restore a path to the American Dream. An ambitious book grappling with the broad significance of small business to the economy, the historical role of credit markets, the dynamics of innovation cycles, and the policy implications for regulation, Fintech, Small Business & the American Dream is relevant to bankers, fintech investors, and regulators; in fact, to anyone who is interested in the future of small business in America.
