**The Self-Taught Computer Scientist** Cory Althoff,2021-09-16 The follow-up to Cory Althoff's bestselling *The Self-Taught Programmer*, which inspired hundreds of thousands of professionals to learn to program outside of school! Fresh out of college and with just a year of self-study behind him, Cory Althoff was offered a dream first job as a software engineer for a well-known tech company, but he quickly found himself overwhelmed by the amount of things he needed to know, but hadn't learned yet. This experience combined with his personal journey learning to program inspired his widely praised guide, *The Self-Taught Programmer*. Now Cory's back with another guide for the self-taught community of learners focusing on the foundations of computer

science. The Self-Taught Computer Scientist introduces beginner and self-taught programmers to computer science fundamentals that are essential for success in programming and software engineering fields. Computer science is a massive subject that could cover an entire lifetime of learning. This book does not aim to cover everything you would learn about if you went to school to get a computer science degree. Instead, Cory's goal is to give you an introduction to some of the most important concepts in computer science that apply to a programming career. With a focus on data structures and algorithms, The Self-Taught Computer Scientist helps you fill gaps in your knowledge, prepare for a technical interview, feel knowledgeable and confident on the job, and ultimately, become a better programmer. Learn different algorithms including linear and binary search and test your knowledge with feedback loops Understand what a data structure is and study arrays, linked lists, stacks, queues, hash tables, binary trees, binary heaps, and graphs Prepare for technical interviews and feel comfortable working with more experienced colleagues Discover additional resources and tools to expand your skillset and continue your learning journey It's as simple as this: You have to study computer science if you want to become a successful programmer, and if you don't understand computer science, you won't get hired. Ready for a career in programming, coding, or software engineering and willing to embrace an always be learning mindset? The Self-Taught Computer Scientist is for you.

**The Mathematics of Frobenius in Context** Thomas Hawkins, 2013-07-23 Frobenius made many important contributions to mathematics in the latter part of the 19th century. Hawkins here focuses on his work in linear algebra and its relationship with the work of Burnside, Cartan, and Molien, and its extension by Schur and Brauer. He also discusses the Berlin school of mathematics and the guiding force of Weierstrass in that school, as well as the fundamental work of d'Alembert, Lagrange, and Laplace, and of Gauss, Eisenstein and Cayley that laid the groundwork for Frobenius's work in linear algebra. The book concludes with a discussion of Frobenius's contribution to the theory of stochastic matrices.

*Topics in Case-based Reasoning* Stefan Wess, Klaus-Dieter Althoff, Michael M. Richter, 1994 This volume presents the 36 full refereed papers selected from the presentations at the First European Workshop on Case-Based Reasoning, held at Kaiserslautern, Germany in November 1993. Case-based reasoning (CBR) has recently attracted much interest among AI researchers: it supports knowledge acquisition and problem solving, and it is related to machine learning, analogical reasoning, cognitive modeling, similarity, and information retrieval. EWCBR is now established as the prime European forum for CBR research. This volume reflects the importance of this dynamic area of

research through essential contributions to all aspects of CBR research and advanced applications.

*Arctic Mission* William F. Althoff, 2011 *Arctic Mission* recounts two concurrent Navy Department penetrations of the Arctic in 1958, one an unclassified project, the other absolutely secret. Sailing under the direct orders of the Commander in Chief, the nuclear submarine *Nautilus* would, if successful, reaffirm U.S. technological prowess with a stupendous demonstration; an under-ice transit of the Arctic Basin via the North Pole. The airships unclassified mission was an Office of Naval Research project, with the objective to assess the suitability of non-rigid airships for support of field parties deployed throughout the North, ashore and afloat. That August, BUNO 126719 crossed the Arctic Circle, the sole military airship ever to do so, en route to rendezvous with a U.S. Air Force ice-rafted camp in the Arctic Ocean. As 719 pressed north, *Nautilus* pierced the geographic pole, then without changing course logged the first-ever transit of the deep-ocean Arctic, Pacific to Atlantic. Based on interviews and correspondence with dozens of participants, and on Navy Department reports, the work presents first-hand material throughout, and is a distinct contribution to naval literature.--Amazon.
