Learning to Speak Alzheimer's Joanne Koenig Coste,2004-09-08 A guide to more successful communication for the millions of Americans caring for someone with dementia: “Offers a fresh approach and hope.”—NPR
Revolutionizing the way we perceive and live with Alzheimer’s, Joanne Koenig Coste offers a practical approach to the emotional well-being of both patients and caregivers that emphasizes relating to patients in their own reality. Her accessible and comprehensive method, which she calls habilitation, works to enhance communication between care partners and patients and has proven successful with thousands of people living with dementia. Learning to Speak Alzheimer’s also offers hundreds of practical tips, including how to: · cope with the diagnosis and adjust to the disease’s progression · help the patient talk about the illness · face the issue of driving · make meals and bath times as pleasant as possible · adjust room design for the patient’s comfort · deal with wandering, paranoia, and aggression “A fine addition to Alzheimer's and caregiving collections.”—Library Journal (starred review) “Promises to transform not only the lives of patients but those of care providers...This book is a gift.”—Sue Levkoff, coauthor of *Aging Well*

Person-Centered Memory and Communication Interventions for Dementia Ellen M. Hickey,Natalie F. Douglas,2021-03-19 Person-Centered Memory and Communication Interventions for Dementia: A Case Study Approach is the third volume in the “Medical Speech-Language Pathology” book series. It is a practical, peer-reviewed resource for speech-language pathologists (SLPs) working with people with dementia. In this unique text, the authors cover a variety of evidence-based clinical procedures for the memory, communication, and behavioral challenges of people with dementia. The aim is to empower SLPs and other clinicians to implement practices that elevate the personhood of people living with various dementia syndromes. Throughout this clinician-friendly text, the authors cover three main areas of focus: elevating personhood, the “how tos” of clinical procedures, and the organizational-level barriers and facilitators to implementation. After an introductory chapter, the next eight chapters describe a detailed case study that explains specific person-centered assessment and treatment methods. The cases depict a diverse group of people providing insights into the range of concerns and joys involved in supporting memory and communication in a manner that is culturally responsive and equitable. Key Features: * The only dementia text that incorporates a culturally responsive approach to cases that reflect the increasing diversity of the aging population * Specific examples of the “how tos” of person-centered, evidence-based care * Detailed personal, assessment, and treatment histories for each case, with a table of goals and intervention procedures, as well as illustrations of memory and communication strategies * Each chapter starts with an “At-A-Glance” section to highlight the person and ends with a summary of key points of the treatment and implementation factors * Uses a highly readable writing style with boxes, tables, and figures to support the text

On Pluto: Inside the Mind of Alzheimer's Greg O'Brien,2018-02-27 This is a book about living with Alzheimer's, not dying with it. It is a book about hope, faith, and humor—a prescription far more powerful than the conventional medication available today to fight this disease. Alzheimer's is the sixth leading cause of death in the US—and the only one of these diseases on the rise. More than 5 million Americans have been diagnosed with Alzheimer's or a related dementia; about 35 million people worldwide. Greg O'Brien, an award-winning investigative reporter, has been diagnosed with early-onset Alzheimer's and is one of those faceless numbers. Acting on long-term memory and skill coupled with well-developed journalistic grit, O'Brien decided to tackle the disease and his imminent decline by writing frankly about the journey. O'Brien is a master storyteller. His story is naked, wrenching, and soul searching for a generation and their loved ones about to cross the threshold of this death in slow motion. *On Pluto: Inside the Mind of Alzheimer's* is a trail-blazing roadmap for a generation—both a “how to” for fighting a disease, and a “how not” to give up!

Handbook of Normative Data for Neuropsychological Assessment Maura Mitrushina,Kyle B. Boone,Jill Razani,Louis F. D'Elia,2005-02-10 When *Handbook of Normative Data for Neuropsychological Assessment* was published in 1999, it was the first book to provide neuropsychologists with summaries and critiques of normative data for neuropsychological tests. The Second Edition, which has been revised and updated throughout, presents data for 26 commonly used neuropsychological tests, including: Trailmaking, Color Trails, Stroop Color Word Interference, Auditory Consonant Trigrams, Paced Auditory Serial Addition, Ruff 2 and 7, Digital Vigilance, Boston Naming, Verbal Fluency, Rey-Osterrieth Complex Figure, Hooper Visual Fluency, Design Fluency, Tactual Performance, Wechsler Memory Scale-Revised, Rey Auditory-Verbal learning, Hopkins Verbal learning, WHO/UCLA Auditory Verbal Learning, Benton Visual Retention, Finger Tapping, Grip Strength (Dynamometer), Grooved Pegboard, Category, and Wisconsin Card Sorting tests. In addition, California Verbal learning (CVLT and CVLT-II), CERAD ListLearning, and selective Reminding Tests, as well as the newest version of the Wechsler Memory Scale (WMS-III and WMS-III A), are reviewed. Locator tables throughout the book guide the reader to the sets of normative data that are best suited to each individual case, depending on the demographic characteristics of the patient, and highlight the advantages associated with using data for comparative purposes. Those using the book have the option of reading the authors' critical review of the normative data for a particular test, or simply turning to the appropriate data locator table for a quick reference to the relevant data tables in the Appendices. The Second Edition includes reviews of 15 new tests. The way the data are presented has been changed to make the book easier to use. Meta-analytic tables of predicted values for different ages (and education, where relevant) are included for nine tests that have a sufficient number of homogeneous datasets. No other reference offers such an effective framework for the critical evaluation of normative data for neuropsychological tests. Like the first edition, the new edition will be welcomed by practitioners, researchers, teachers, and graduate students as a unique and valuable contribution to the practice of neuropsychology.

Clinical Diagnosis and Management of Alzheimer's Disease, Third Edition Serge Gauthier,2006-11-22 The third edition of this successful textbook has been completely updated throughout and includes new chapters on electrophysiological tests, biological markers, global staging measures, and management of neuropsychiatric symptoms. There has been steady progress in our understanding of the natural history, prognostic factors and treatments for Alzheimer's disease since the previous edition of this textbook was published in 1999. The chapters deal with the full spectrum of populations at risk, persons in prodromal stages, and patients from mild to severe and even terminal stages. The contributors are opinion leaders from North America and Europe, which gives the book an internationally balanced outlook. Heterogeneity of Alzheimer's Disease Francois Boller,F. Forette,Z.S. Khachaturian,Michel Poncet,Ives Christen,2013-03-08 The term Alzheimer's disease is currently used to refer to senile and also presenile dementia, but the heterogeneity of this disorder is demonstrated in many of its aspects. This is of great theoretical interest, and with the appearance of new therapeutic interventions, it may well also start to have very significant practical importance. To shed some light on the debate, the Fondation Ipsen organized an international symposium which took place on April 6, 1992. This volume contains the proceedings of this meeting, which was attended by researchers in epidemiology, clinical neurology and geriatrics, neuropsychology, neuropathology, molecular biology, and genetics.
