Albino Animals Kelly Milner Halls,2004 Everyone has probably seen the white mice or rabbits with pink eyes. Learn about these and other albino animals, the genetics that cause albinism, and the survival challenges albinos face. Have you ever seen an albino mouse or rabbit? What makes them albino? Albino animals carry a specific gene that makes their hair, their skin, and their eyes have no color. Albinos exist in virtually every species on earth-insects, birds, fish, and mammals-even humans. Discover more about these intriguing animals through vivid photography and interesting information about the special challenges these animals face in order to survive. Albinism is a genetic condition that exists in virtually every species on earth: fish, insects, birds, reptiles, amphibians, mammals, and humans. Each species is represented in the book, along with eye-catching photography.

The Photo Ark Joel Sartore,2017 This book of photography represents National Geographic's Photo Ark, a major cross-platform initiative and lifelong project by photographer Joel Sartore to make portraits of the world's animals -- especially those that are endangered. His message: to know these animals is to save them. Sartore intends to photograph every animal in captivity in the world. He is circling the globe, visiting zoos and wildlife rescue centers to create studio portraits of 12,000 species, with an emphasis on those facing extinction. He has photographed more than 6,000 already and now, thanks to a multi-year partnership with National Geographic, he may reach his goal. This book showcases his animal portraits: from tiny to mammoth, from the Florida grasshopper sparrow to the greater one-horned rhinoceros. Paired with the prose of veteran wildlife writer Douglas Chadwick, this book presents an argument for saving all the species of our planet.

Health Effects of Exposure to Low Levels of Ionizing Radiation National Research Council,Division on Earth and Life Studies,Commission on Life Sciences,Committee on the Biological Effects of Ionizing Radiation (BEIR V),1990-02-01 This book reevaluates the health risks of ionizing radiation in light of data that have become available since the 1980 report on this subject was published. The data include new, much more reliable dose estimates for the A-bomb survivors, the results of an additional 14 years of follow-up of the survivors for cancer mortality, recent results of follow-up studies of persons irradiated for medical purposes, and results of relevant experiments with laboratory animals and cultured cells. It analyzes the data in terms of risk estimates for specific organs in relation to dose and time after exposure, and compares radiation effects between Japanese and Western populations.

The Coat Colors of Mice W.K. Silvers,2012-12-06 Many investigators seem to

be fascinated by the coat colors of the mammals with which they work. This seems to be the case particularly for those utilizing isogenic strains of mice, not only because such strains display widely different phenotypes, but because scientists, by definition, are an inquisitive lot and it is sometimes difficult for the uninitiated to comprehend how such phenotypes are produced. This bewilderment becomes even more apparent if the investigator happens to be involved in breeding studies and a number of attractively colored animals, quite different from the original stocks, appear. Thus I can recall numerous occasions when my colleagues, frequently working in areas completely unrelated to any aspect of genetics, have come to me with an attractively pigmented animal or, more likely, with a population of segregating coat color types (usually because they have not tended their animals properly and have ended up with a cage full of F2S displaying a number of different colors). How, they ask, do such colors come about? While in some cases it is easy to take chalk in hand and explain what has been going on (segregating) and why, in other cases it is virtually impossible. It is extremely difficult because while the interactions of many coat-color factors obey the simple laws of heredity and of predictable gene interactions, others do not.
