South America's National Parks William C. Leitch,1990

Visitors to South America enter a world of astounding natural contrasts and unusual wildlife. This one-of-a-kind guide will take travellers to the exotic heart of seven countries via 35 parks, where they can experience the outstanding scenery, unique flora and fauna, and the variety of outdoor activities they left home to find. With 16 pages of colour photographs and indispensable maps of the parks, South America's National Parks brings to life the natural wonders of the Green Continent and gives visitors a lasting keepsake of their journeys.

River Ecology Michael A. Mallin,PROF MICHAEL A.

MALLIN,2023-08-03 Rivers have been vitally important to human populations worldwide for millennia as highways for inland travel, and as sources of water for drinking, cooking, cleaning, manufacturing, irrigation, and power generation, as well as repositories for human, animal, and industrial wastes. This accessible textbook takes a broad approach to river ecology, covering the basics but going beyond by including topics that are often overlooked such as blackwater streams and rivers, tidal creek ecosystems, and reservoir limnology. Since most running water (lotic) systems have been altered or impacted by human activities, there is significant emphasis on anthropogenic impacts, including sedimentation, nutrient pollution and related eutrophication issues as well as the effects of dams and river fragmentation, power plant operations, chemical contamination,

wastewater treatment discharges, industrial scale livestock production, invasive species, and rural and urban storm water runoff on river ecosystems. Advances in stream and river restoration are also discussed.

The Biogeochemistry of the Amazon Basin Michael E. McClain, Reynaldo L. Victoria, Jeffrey Edward Richey, 2001 What are the fluxes of greenhouse gases across the atmospheric interface of ecosystems? How much carbon is stored in the biomass and soils of the basin? How are elements from the land transferred to the basin's surface waters? What is the sum of elements transferred from land to ocean, and what is its marine fate? This book of original chapters by experts in chemical and biological oceanography, tropical agronomy and biology, and the atmospheric sciences will address these and other important questions.

Design for Partnerships for Change Sandi Hilal,Merve Bedir,Mette Ramsgaard Thomsen,Martin Tamke,2023-10-29

Architecture has played a very important role in colonization of the society and the earth, and today we have the urgent task to crack the theory and practice of this same Architecture. We can achieve this only by working collectively towards reframing concepts that has been at the centre of a dominant universalist western knowledge creation. Rethinking and reframing the ideals of community, participation, commons, agency, design, and land, this book puts forward a collective effort to shift the centre of architectural thinking and practice, and create as many ways possible to understand our role as architects today. We acknowledge unrecognized practices by bringing back everyday-life experiences, different paths and forms of knowledge production and storytelling that inform our understanding of architecture. The book is part of a series of six volumes that explore the agency of the built environment in relation to the SDGs through new research conducted by leading researchers. The series is led by editors Mette Ramsgaard Thomsen and Martin Tamke in collaboration with the theme editors: - Design for Climate Adaptation: Billie Faircloth and Maibritt Pedersen Zari - Design for Rethinking Resources: Carlo Ratti and Mette Ramsgaard Thomsen (Eds.) - Design for Resilient Communities: Anna Rubbo and Juan Du (Eds.) - Design for Health: Arif Hasan and Christian Benimana (Eds.) - Design for Inclusivity: Magda Mostafa and Ruth Baumeister (Eds.) - Design for Partnerships for Change: Sandi Hilal and Merve Bedir (Eds.)

Amazonia: Landscape and Species Evolution Carina

Hoorn, Frank Wesselingh, 2011-09-26 The book focuses on geological history as the critical factor in determining the present biodiversity and landscapes of Amazonia. The different driving mechanisms for landscape evolution are explored by reviewing the history of the Amazonian Craton, the associated sedimentary basins, and the role of mountain uplift and climate change. This book provides an insight into the Meso- and Cenozoic record of Amazonia that was characterized by fluvial and long-lived lake systems and a highly diverse flora and fauna. This fauna includes giants such as the ca. 12 m long caiman *Purussaurus*, but also a varied fish fauna and fragile molluscs, whilst fossil pollen and spores form relics of ancestral swamps and rainforests. Finally, a review of the molecular datasets of the modern Amazonian rainforest and aquatic ecosystem, discussing the possible relations between the origin of Amazonian species diversity and the palaeogeographic, palaeoclimatic and palaeoenvironmental evolution of northern South America. The multidisciplinary approach in evaluating the history of Amazonia has resulted in a comprehensive volume that provides novel insights into the evolution of this region.

Biodiversity National Academy of Sciences/Smithsonian Institution, Division on Earth and Life Studies, Commission on Life Sciences, E.O. Wilson, 1988-01-01 This important book for scientists and nonscientists alike calls attention to a most urgent global problem: the rapidly accelerating loss of plant and animal species to increasing human population pressure and the demands of economic development. Based on a major conference sponsored

by the National Academy of Sciences and the Smithsonian Institution, Biodiversity creates a systematic framework for analyzing the problem and searching for possible solutions.
